Dr. Earl B. Sanborn, Jr. (*r.s. NS* 1943), Dept. of Surgical Pathology, 630 West 168th St., New York 32, N. Y.
Dr. Clifford J. Straehley, Jr. (*WS* 1947), 7834 South Tacoma Way, Tacoma, Wash.

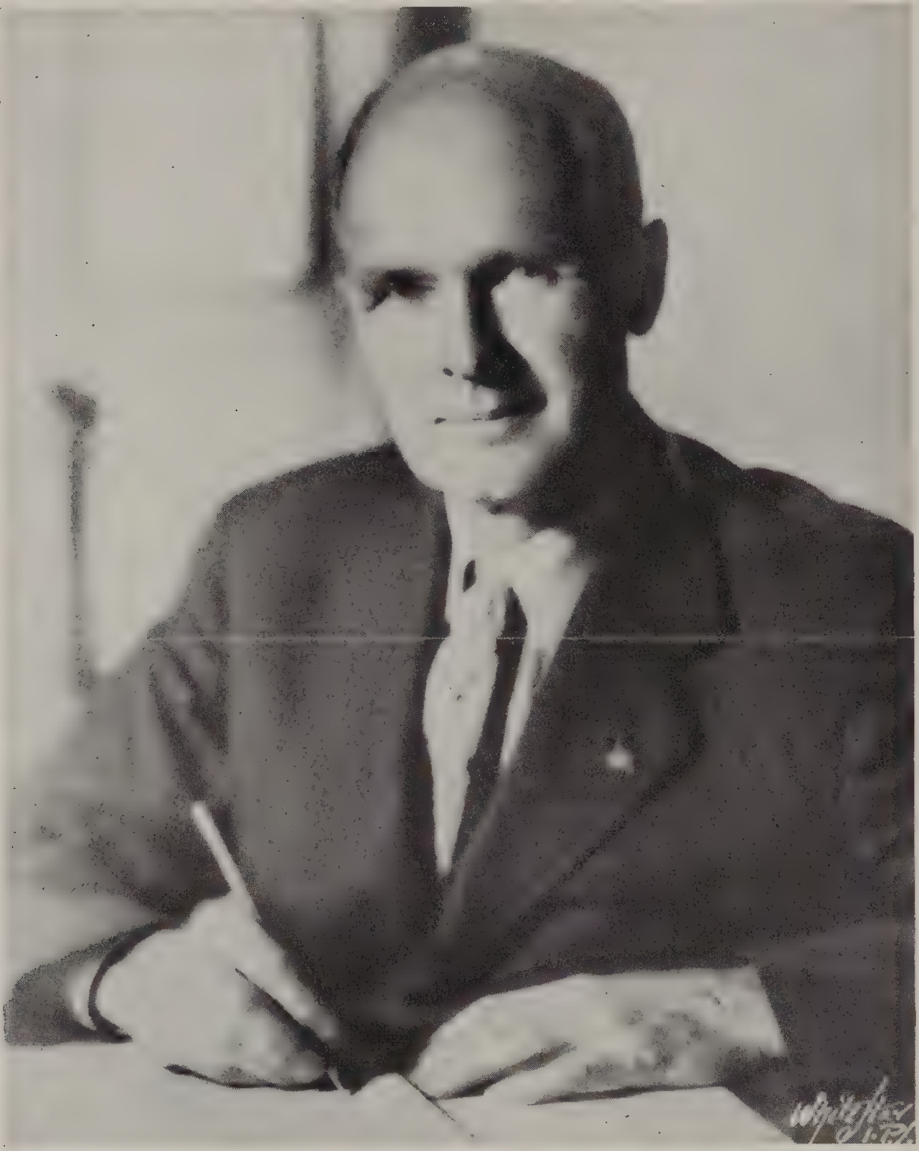
Brief bits:—

Dr. Henry K. Beecher is to give the Kellogg Lecture at George Washington University, Washington, D. C., on March 8. His subject will be "The surgical physiological aspects of resuscitation".

Dr. Stanley Cobb has been invited to give the Thomas William Salmon Lectures on Psychiatry and Mental Hygiene in New York City next November.

Dr. Jacob E. Finesinger was Visiting Professor of Psychiatry at the University of Maryland during January.

Dr. Joe V. Meigs spent the month of February lecturing in the middle and far West. On February 7 he delivered the 28th Annual Beaumont Lecture in Detroit, before the Wayne County Medical Society. His subject was "Modern concepts in the treatment of carcinoma of the cervix". From Febru-



No. 15 in a series of Staff photographs
Dr. James C. White — Chief of Neurosurgical Service

ary 14 through 19 he read five papers at the California Obstetrical and Gynecological Postgraduate Assembly in Los Angeles. His subjects were "Carcinoma of the cervix", "Endometriosis", "Carcinoma of the ovary", "Dysmenorrhea", and "Incontinence of urine". On February 21 he lectured on "Carcinoma of the cervix" before the San Diego Gynecological Society.

Dr. Langdon Parsons has been made full Professor in Gynecology at Boston University and Massachusetts Memorial Hospitals.

Dr. Laurence L. Robbins read a paper on "Correlation between the roentgenologic and pathologic findings in chronic pneumonitis of the cholesterol type" at the Annual Meeting of the Radiological Society of North America, held in San Francisco last December. Dr. Ronald C. Sniffen was co-author. The exhibit illustrating this work won the Third Prize in the Scientic Exhibit associated with the meeting.

Dr. Judson A. Smith left on February 1 for his annual vacation. He flew to England, and will visit Switzerland, San Remo, Italy, the French Riviera, and Paris.

In order to accommodate material to space last month, it was necessary to omit two lines of print which followed our quotation from Mr. Edward A. Weeks's radio address on Dr. Harvey Cushing. Those lines reminded our readers that besides being Editor of the *Atlantic Monthly,* Mr. Weeks is a member of our MGH Corporation.

Dr. Frederick Wyatt has accepted a full-time appointment at Cushing General Hospital.

Dr. Faxon has received a letter from Dr. Chiu-an Wang (*WS* 1944), Acting Director at the Hackett Medical Center-American Presbyterian Mission, Canton, China. It is dated January 21, and says in part:

> We have been with this Medical Center since we left Lingnan University and Canton Hospital last August. The work here has been heavy, especially with the addition of the administrative load. However, I still manage to be able to do some very interesting surgery.
>
> We now have two daughters — Irene, age one year and eight months, and Alice, three months. They both grow rapidly.
>
> With the moving of the Nanking Government to this city we are expecting the cost of living will jump again, and that life in this part of the country will be more difficult. We all hope for a compromised peace.

We wish Dr. Wang would write a long letter to The News very soon. We are sure he could tell us much about present conditions in China which would be of great interest to all his many friends over here.

A short note from Dr. Albert J. Stunkard (*M* 1946) gives a new address—Johns Hopkins Hospital, 601 North Broadway, Baltimore 5, Maryland. In addition, he says:

> Please excuse the haste with which this is being sent, but I wanted to notify you of my new address.
>
> I've enjoyed reading The News. Hope you are all getting along well.

Haste and brevity will be excused only on one condition, Dr. Stunkard — that you send us a longer letter soon. Because of your recent experiences in Japan, you, as well as Dr. Wang, can give us an interesting first-hand account of conditions in the Orient.

We have received a very interesting letter from Dr. William J. Tobin (*Or.* 1939). His address is 1835 Eye Street NW., Washington 6, D. C., and he writes:

> I recently returned from a visit to the Army hospitals in the American Zone of Germany and Austria. The trip was made as Civilian Consultant in Orthopedic Surgery to the Surgeon General of the Army. It was most interesting, but November and December are not the best months of the year to fly across the Atlantic and Europe. The weather was consistent — consistently bad. The trans-Atlantic trip was made in a Navy plane, as a part of MATS. We began by being grounded for two days in Newfoundland. The trip across was uneventful, except that we could not land at Frankfort. Because of the weather we had to come down at Wiesbaden. There we found the Airlift performing a perfectly magnificent piece of work.
>
> The orthopedic center at Stuttgart is functioning well and the type of work being done there is of a very high level. The medical officers through the entire European Command are doing a good job. The majority of the officers are young men, and they seem anxious to have the consultants visit the hospitals. The replacement of the young medical officers, upon the completion of their overseas tour of duty, is a serious problem. The furnishing of young doctors for the Army is a challenge to the medical profession, which I feel the profession will surely meet.
>
> In addition to visits to the Army hospitals, I had an opportunity to visit the Universities at Frankfort, Heidelberg, Zurich, and Vienna.
>
> Traveling through Vienna was an interesting experience because it is behind the "iron curtain" and it was necessary to have, in addition to the regular Army orders, orders written in Russian for travel through the Russian Zone of Austria, in order to reach Vienna. I visited Böhler's Clinic in the Russian Zone of Vienna.
>
> Following the completion of my tour for the Army, I came back through Paris and London. Although the trip was a hurried one, it was an interesting experience.

Dr. Robert N. Rutherford (*WS* 1938) has responded to our appeal for news about himself and gives us much in a few words. He writes:

> My own particular MGH surgical class is represented here in Seattle by Chuck MacMahon and me. He is doing surgery and I am doing obstetrics and gynecology. The latter manages to continue a busy practice because of our various university student G.I. housing projects which keep the problem ever present.
>
> Am delighted with the Northwest because of its out-of-door pursuits and people, most of whom came from Iowa or the Dakotas.
>
> Have three children, with another competitor on the way. Edit the *Western journal of surgery, obstetrics and gynecology.* Am on the staff of the new University of Washington School of Medicine which has attracted a number of old Harvard and MGH friends.
>
> Henry Garrigues (*WS* 1939) is also here, doing vascular surgery and making quite a name for himself.
>
> All in all, I feel that this is a challenging area in medicine.
>
> Enjoy The News greatly and read it *before* my copy of ***Time.***

THE NEWS

Massachusetts General Hospital 1811

No. 78 Boston, Mass. April 1949

SOCIAL SERVICE AFFAIRS

In October 1905, on the first floor of the Out-Patient Building, opposite the lunch counter, medical social work was born. Prior to this time such service was unknown; now no hospital in the United States, of any size and of high standard, is without such a department, and in many other countries the example has been followed. Initiated by Dr. Richard C. Cabot, then Out-Patient Physician, and supported by Dr. Cabot and a group of public-spirited citizens, two social workers were employed to help make medical care more effective by attempting to deal with whatever in the patient's personal or social situation interfered with the carrying out of medical care. As early as 1907, Dr. James J. Putnam, a staunch supporter of development of the work through the years, was active in starting neuropsychiatric social service in the Neurological Clinic. By 1914, the medical social service had been extended to patients on the wards, and at that time the Trustees recognized Hospital Social Service as a part of the hospital system by creation of the office of "Chief of Social Service". Miss Ida M. Cannon, who from 1907 had been head worker, was appointed Chief in 1914—a position she held until her retirement in 1945. With understanding, patience, and great wisdom she, more than anyone else, was responsible for the growth and spread of medical social work throughout this country and the world. Dr. Frederic A. Washburn, as Director through the growing years, was at first a sceptic, but later a staunch ally. His challenge to the department to prove itself, and his fairness and wholehearted support contributed much through the years. In 1919 the Trustees voted: "That the Social Service Department be from this time forward considered as an integral part of the Hospital, both administratively and financially; and that the present Supervisory Committee be continued, and that due regard be given to its recommendations." Thus, after fourteen years of probation, the department became a definite part of the hospital.

Associated always with clinical care and operating only at the request of clinicians, the work of the department has shared the goals and aims of the hospital in its three functions: complete care of the patient, teaching, and research to improve that care. The "social laboratory" has become an integral part of the complete diagnostic and treatment procedures for patients.

CARE OF THE PATIENT

From the early beginning of two workers limited to the Out-Patient Department, we now have a staff of 35 professionally educated and experienced workers who cover every clinical service of the hospital — ward and out-patient — including Baker Memorial and Phillips House. In 1929, request was made by the Trustees to include social service for private patients in Baker Memorial, and with the opening of that unit in 1930 a worker was assigned there. Almost from the beginning the worker in Baker has taken referrals from physicians of their patients in Phillips House as well as those in Baker Memorial.

In 1948, the department gave service to approximately 10,000 patients — 9,905, to be exact. Many of these patients were referred for additional social study, so that in teamwork with the doctors the social data which surrounds care of the patient might be dealt with as carefully and evaluatively as is the data from the medical laboratory. In the wards and clinics referrals were made for specific problems in order to make effective plans for convalescence, nursing home care, the carrying out of medically advised regimens at home, admission to sanatoria, rehabilitative plans so that medical care will produce physical, mental, and social well-being, chronic and terminal care, arrangements for family maintenance during illness, necessary transportation to and from hospital, and suitable discharge plans to insure the maximum benefits from the skilled medical care. During the year, the department arranged for payment of ancillary medical expenses for patients, such as nursing home and convalescent care, apparatuses, dentures, housekeepers, transportation, etc. to the amount of $29,721—this amount raised from community sources (public and private), from special funds given to the department, and from patients and families on a time-payment basis.

It is difficult to mention all the many services and their special problems. In general, problems of chronic disease and its management are of major significance. Almost two-thirds were of this nature. Geriatrics and increasing longevity bring additional problems to patients and the community.

In the Orthopedic Service, Mrs. Hazel T. Fritz constantly strives to meet major problems of rehabilitation and adaptation to terrific physical handicap. Skillful orthopedic surgery is of little value unless the patient can become reasonably useful to himself, his family, and his community.

The Children's Cardiac Service, long famous throughout this country and elsewhere, has offered complete and continuous care for children with rheumatic fever and heart disease. In 1914, the Committee for the Home Care of Children with Heart Disease was formed. Its activity through the years in supporting medical-social home visits by social worker and physician, the services of craft worker in home and shop, school teachers and tutors at home, housekeepers, and the formation of Mothers' Club and In-Bed-Club have led the way for adequate rehabilitation and preventive care. It is interesting to note that at present the plans initiated in New York hospitals, written of as pilot studies, are very like the home care which has been carried on here for years. Miss Terry and her staff have added much to the development of continued care in hospital and home. To a less organized degree, home care for our patients has always been the primary service of the total department. We look forward to expansion of a medical extern service which may mean more continuity of medical and social care.

Departmental statistics show that the cardiovascular diagnostic group represents over thirty percent of patients served in the general medical services—ward and clinic—excluding specialized clinics. With increased interest, study, and support through private and public funds we hope to offer additional information from the social laboratory regarding the relationship of social and environmental factors in etiology, diagnosis, and management of these diseases.

The Emergency Ward requests rapid handling of complicated problems. Many patients needing terminal care, temporary convalescence, or nursing home are seen. Early referrals by doctors and adequate Social Service coverage would pay dividends in terms of reducing hospitalization or re-entry to Emergency Ward by giving time for constructive, suitable social planning from this "traffic center" of the hospital.

As an integral part of clinical care, the conference method has developed throughout the services as a means of review and referral, the sharing of information, and the making of suitable treatment plans. Rounds and conferences, in which Social Service participated as far back as 1935, have been further extended and deepened in the teamwork relation within the past few years. Miss Dorothy E. Kellogg, Supervisor of Social Service for the medical wards and out-patient clinics, describes the medical-social ward conferences as follows:

"Medical-social conferences on the wards have progressed significantly this year as an established part of hospital practice. Almost without exception, they are attended by the Visiting Physician once a week on each ward from 10:30 A.M., for one hour or more, to assess problems requiring referral to Social Service, and to share social data pertinent to the care of patients. A high level of teamwork has been evolved. The conferences are conducted by the Assistant Resident on the ward and attended by the entire ward team, including 4th year medical students, head nurse, ward social workers, and others involved in the patients' care, or student nurses who attend for teaching purposes as agreed to by the Resident. The hospital's tradition of care of patients is entrusted to an ever-rotating group of interns and other personnel, under the guidance of their consultants and members of the Visiting Staff. We have learned much, and the care of patients has, we believe, been measurably furthered by our medical-social ward conferences. They have made it possible to function as a team, to plan our work more effectively, to experience the disciplines of the scientific approach to interrelated medical-social-emotional problems in illness, and to facilitate optimal use of the hospital by adequate and prompt discharge plans which serve the interests of patient-family-community. These social plans are aimed to safeguard gains made during hospitalization and to mobilize community resources appropriate to the requirements and dignity of whatever after-care, outside the hospital, the patient and the family may require. Conferences have been attended by many visitors from other hospitals and other countries, as a source of exchangeable teaching and services. The conferences are chiefly for work purposes as a team engaged in care of patients. Our concept is that they help to achieve some of the social goals of medicine."

Rounds and conferences are held weekly on practically all services, with the exception of surgery.

To make social data further available, each patient known to Social Service has, as a part of his medical record, a Social Service sheet ("pink sheet") which summarizes social data and treatment.

Josephine C. Barbour,
Chief of Social Service

(The conclusion of this article by Miss Barbour will appear in the next issue.)

Miss Agnes V. Dunn, who has been an Executive Assistant in the Phillips House since 1920 and Assistant to the Director for the past two years, has been forced to resign because of ill health. We are very sorry to see her leave.

Mrs. Constance Braman, who has been an Executive Assistant in the Phillips House, was appointed to succeed Miss Dunn as Assistant to the Director and assumed charge on March 21.

At the March 18 meeting of the MGH Research Council, Dr. Louis H. Hempelmann spoke on "Radiation injury".

OFFICIAL NOTICE

REPORT FOR 1948

During 1948 a determined effort was made to decrease expenses and increase income, in order to remedy the truly alarming deficits of the preceding three years. I am happy to report that we were successful and the deficit was reduced to $53,000.

Salaries and wages		$3,581,204
Supplies and expenses		2,189,273
		$5,770,477
Gross earnings	$5,407,589	
Less—Free service	935,175	
Bad debts	249,841	
Net earnings	4,222,573	
Other income	616,779	
Total hospital income	4,839,352	4,839,352
Operating deficit		931,125
From Treasurer		877,772
Deficit		$ 53,353

In addition $468,426 was used to support Research in the various hospital laboratories. Some of this was from Hospital Research Funds, but most of it came from Special Grants.

For 1949 we will have to face another increase in budget allowances—fortunately, not as great as last year. To meet it we will have to use the same measures as before, namely, an increase in rates to patients and the practice of economy and efficiency in operation.

We all must be true to our New England heritage and waste neither time nor material. Save heat, save light, save water, save everything that can be saved. Treat hospital equipment and supplies as though they were your own. If every one of the 2,000 of us does this, many thousands of dollars can be saved.

Our salary and wage scale and hours of work now compare favorably with scales and hours outside the hospital. Work is regular and steady. We all can be proud of being a part of the M.G.H.

The Trustees and Director express their appreciation for the conscientious services of all during the pas' year and their expectation that the same spirit of service will be present during the coming year.

N. W. Faxon, M.D.,
Director

On Monday, March 21, Ward 4 was named for its benefactor, Mr. Edward Mallinckrodt, Jr. There were dedicatory exercises in the Ether Dome, a tablet in the Ward was unveiled, and a tea party in the Medical Staff Room was given for the invited guests by the Ladies' Visiting Committee.

* * *

Dr. Geoffrey Edsall (EM 1936) has been appointed Professor of Bacteriology at Boston University School of Medicine. Dr. Edsall has been Director of the Biologic Laboratories of the Massachusetts Department of Public Health for the past seven years, and has taught special groups at several local medical schools and colleges.

The Board of Trustees, at their meetings on February 18 and March 4, voted:

To accept with regret the resignation of Dr. Langdon Parsons and to appoint him to the Board of Consultation;

To accept the resignation of Dr. Wyman Richardson with great regret and to appoint him to the Board of Consultation;

To grant Dr. Robert S. Grier leave of absence for a period of two years.

To appoint:

Dr. Frederick C. Goetz as Resident in Medicine for one year, beginning October 1, 1950;

Dr. Carl W. Gottschalk as Assistant Resident in Medicine, beginning July 1, 1950;

Dr. Albert J. D. Michel as Assistant Resident in Anesthesia for six months, beginning March 1;

Dr. Kenneth P. Nash as Assistant Resident in Psychiatry, beginning July 1;

Dr. Robert F. Wilson as Assistant Resident on the Children's Medical Service from March 1 to June 30.

At their meetings on February 9, 16 and 23, and March 2 and 16, the General Executive Committee voted:

To promote Dr. J. Roger Newstedt to the position of First Assistant Resident in Surgery, as of March 1.

To appoint:

Dr. Sergio d'A. Aguinaga as Clinical Fellow in Urology for the period January 1 through June 30;

Dr. Willis H. Bower as Clinical Assistant in Neurology for the period February 19 through June 30;

Dr. James M. Brown as Clinical Fellow in Medicine for one year, beginning September 1, to work with Dr. Donald S. King;

Dr. Bodil Farup as Research Fellow in Psychology, to work with Dr. Lucie J. Jessner;

Dr. Ralph Hawkins as Clinical and Research Fellow in Neurosurgery for the period February 1 through June 30;

Dr. John H. Lamont as Clinical Fellow in Psychiatry for one year, beginning July 1;

Dr. Daniel M. Miller as Clinical Fellow in Surgery, assigned to the Tumor Clinic for one year, beginning July 1;

Dr. Albert O. Seeler as Clinical and Research Fellow in Medicine, assigned to the Occupational Medical Clinic;

Dr. Robert J. Tracy as Clinical Fellow in Surgery for one month, beginning March 1;

Dr. Albert L. Wanner as Clinical Fellow in Neurology, assigned to the electroencephalographic laboratory for three months, beginning March 1.

Mrs. Shirley Nelson Shuman's article on the MGH Blood Bank, which was published in our March issue, had been held over for six weeks or so because of lack of space. By the time it appeared in print, our new Blood Bank had been opened, and we hasten to counteract the impression of a somewhat dreary setup here, which was a correct description of the old Blood Bank, with Mrs. Shuman's brief account of our new quarters. She says:

The first of March marked the official opening of the new Blood Bank in what had been the pharmacy quarters in the Domestic Building.

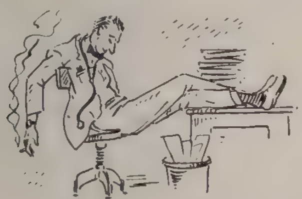
The contrast with the dingy basement is stupendous. Good light, fresh air, and comfort are everywhere. Fluorescent lights and softly shaded walls ease the eyes; while below, covered floors soften the tread. As an adjunct to well-being, the air is cleansed and regulated by air-conditioning. To further enhance enjoyment, the bricked and arched walls in pastel blue and peach offer an inviting background to Dr. Soutter's collection of historical and picturesque prints. Over and above, are the cheery smiles of the capped nurses in smart uniforms, who had heretofore been subjected to headgear and coats in the old basement quarters.

Concentration of space makes for convenience and efficiency. This is first evidenced in the reception hall, where the secretary, clerks, and technician work in close proximity. Benches for the donors fill the center of the room, near which are the examination rooms and lavatories. Offside is the feeding corner which, because of its compactness, allows for closer contact between volunteer worker and donor. To complete the convenient arrangement, the coat racks, with consecutively numbered hangers, are directly in back.

Further convenience and efficiency are supplied by the bright and sunny blood-giving and resting room. Here, the donors rest *directly* after giving blood, without being moved, thereby eliminating dizziness. In the basement, donors were moved to a separate resting room — which was far from being that, as constant noises from the corridors disturbed the resters.

The arrangement of the laboratory, too, provides for the greatest economy of movement and efficiency.

Here's to success to the new Blood Bank!



Every member of the House Staff will recognize himself in the above picture, the drawing for which was done by Dr. Hermes C. Grillo, now one of our Surgical Interns and soon to become a member of the Resident Staff. But what you may not know is that the cut is to be used in the future as the insigne to head a newly-launched House Staff column. So far, no space has been given to these members of the hospital family, and we have felt for a long time that The News does not stand as a complete MGH publication without including this branch of our professional staff.

When we first mentioned this idea to one of our Residents and told him we should need a symbol for the column, he immediately replied, "I've been in the operating room since two o'clock this morning, and at the moment I can think of nothing any more appropriate than a picture of Atlas holding up the world! But, lest we might give the impression of a feeling of over-importance, something else could better be used." He suggested Dr. Grillo for the job, and the above is the result.

We are off to a good start in this number with the article below, by Dr. Grant V. Rodkey, and we hope to continue this House Staff column, without interruption, in future issues. Instead of sending an identical letter to each member of the House Staff, we are extending to you all, now, an invitation to contribute to The News, and are asking that you read the letter to the House Staff, posted on the bulletin board near the foot of Treadwell stairs, as if it were addressed to each of you individually.

SOME PROBLEMS IN CHINESE MEDICINE

When our Editor first requested a short account of my experiences in relation to medicine in China, it seemed unwise to submit such a paper because of the complexity of the problems of Chinese medicine and my relatively short contact with these problems. My tour of slightly more than two years in China is inadequate preparation for a thorough discussion of this subject. However, perhaps some remarks on the general aspects of medical problems in China would not be too misleading.

At the outset, it is impossible to divorce the problems of medicine from the background of poverty and social unrest which is so prevalent in China. When one considers the appalling conditions of overcrowding in poor, unheated houses; the widespread, stark starvation and still more prevalent nutritional deficiencies; the almost-universal lack of modern sanitary facilities; the necessity of using night soil for fertilizer; the dislocation of population, the disease, and the injuries incident to the war with Japan and the present Civil War—when one considers all this, the picture begins to fit into its frame of reference. It seems only natural, under such circumstances, that tuberculosis should be rampant, that infant mortality should be very high, that endo- and ectoparasites should be alarmingly common, that infectious diseases (including smallpox) should ravage large numbers of the people, and that enteric diseases should be well-nigh universal. (Someone has said that, in the absence of reliable statistics to the contrary, constipation seems to be the rarest disease in China!)

In addition, the scarcity of drugs of every type, the paucity of hospital facilities, and the very limited number of public health workers, nurses, physicians, and other technically trained personnel are factors which limit effectiveness of attempts to control the conditions outlined above.

There are, of course, elements in the society which mitigate the rather discouraging picture as thus drawn. Foremost among these is the awareness of the problem among many able Chinese leaders—both lay and professional. The Chinese Medical Association is a dynamic and growing organization. Relatively heavy emphasis has been placed upon the preventive and public health aspects of medicine. Furthermore, there is a determined effort exerted to train larger numbers of physicians and other medical workers. There are a number of medical schools in China and, although the standards of medical instruction are variable, many of them do a very creditable caliber of work — especially creditable when one considers the circumstances under which they operate. Sponsorship of these schools is usually by the Government or by Foreign Missions. Peking Union Medical College is essentially an independent institution at present, but it has only recently begun to operate again since the war — the first class enrolled about eighteen months ago — and the recent turn of political affairs may further affect its plans.

In addition to domestic facilities for medical training, the constant presence here at M.G.H. of Chinese graduate students in medicine or surgery reminds us that China is taking advantage of foreign training opportunities which will help to improve the quality of medical care at home.

In conclusion, one wonders what course the future development of medicine in China will take. Any detailed prediction would almost certainly prove to be erroneous. However, in general, one is left with the conviction that the practical, intelligent, patient effort of those leaders who work to translate the knowledge of modern medicine into concrete improvement of health and the alleviation of suffering among millions of "medically indigent" Chinese will come to fruition.

Grant V. Rodkey, M.D.,
(*WS* 1943 & *2nd asst. r. in S*)

* * *

Probably many of you have seen Dr. Sheo-Nan Cheer (*EM* 1922) round the hospital during the last few weeks, but perhaps not many of you have had the opportunity—as we did— to sit down with him and hear his story of almost incredible patience and persistence in the face of staggering vicissitudes in China over the past several years.

Here, in brief, is what Dr. Cheer told us:

I ended service here at M.G.H. on March 31, 1922 and went to China, to the Peking Union Medical College as Resident in Medicine for about three years, then as Associate in Medicine on the teaching staff. In 1926 I came back to the United States and spent a year at the Western Reserve University Medical College, in Cleveland, working for Dr. C. J. Wiggers, Professor of Physiology, on cardiovascular diseases. In 1927 I worked for about six months with Dr. Arlie V. Bock on the acid base equilibrium of the blood, at the Harvard Fatigue Laboratory.

I returned to Peking in 1928, where I stayed until 1934 as Assistant Professor in Medicine at Peking University Medical College.

In 1934 I was called by the Chinese Government to be Physician-in-Chief and Medical Director of the Central Hospital, Nanking. At that time I began to organize the Medical College of the National Central University, and at the same time I was appointed Dean of the Medical College, which was organized in 1935.

In 1937 we were forced out of Nanking by the Japs and the whole University moved to western China, to the Province of Szechuan. The Medical and Dental Colleges moved to Chengtu, while the rest of the seven colleges of the University went to Chungking. At that time we were guests of the West China Union University, where they had Dental and Medical Schools. In 1938 the Cheerlo Medical College of Shangtung also moved to the campus of the West China Union University. Therefore, they had three medical colleges in Chengtu City. Through the financial help of the Rockefeller Foundation, the three medical colleges and two dental schools were combined in the teaching and a United Hospital of Associated Colleges in Chengtu was also organized. I was the Director there.

We all worked together for four years, but because of the increasing number of students, and also because one unit of the United Hospital was destroyed by fire, we utilized three missionary hospitals in Chengtu for teaching purposes. After this fire we organized the Chengtu General Hospital for the National Central Medical and Dental College. I was also and again Director of this new hospital and dental school, while the Cheerlo and West China Medical Colleges continued their union. I stayed there for four years—spending eight and one-half years, altogether, in Chengtu.

In the fall of 1945 and early 1946—during the V-days—the whole University, plus Medical and Dental Colleges, moved back to Nanking. Our buildings and all our equipment had been destroyed and we had to find new accommodations. Before we left Nanking the students had numbered 500. While away, the student body of the University had increased to 5,000. The Medical and Dental Colleges had grown from 100 to 360 from the time of our leaving Nanking to our return. We were very fortunate to obtain a piece of land through Government allocation—more than 1,000 acres, including some old buildings to accommodate the Colleges of Medicine and Agriculture. The rest of the University remained at the original site in Nanking. Some of the buildings had not been totally destroyed, but we had to use classrooms as sleeping quarters for students and staff.

Rent is prohibitive in price for a professor. At the present time, a professor gets a salary of $5.00 in gold per month. We spent billions in inflated dollars to build dormitories for students and staff. Most of the buildings were completed by 1948. The students were moving in in 1947, and the staff in 1948.

As far as the Medical College is concerned, we have rebuilt laboratories and classrooms, and have a hospital of 250 beds. Equipment for the hospital was obtained through UNRAAC and the American Bureau of Medical Aid to China. Recently, with the internal war going on, the University is again suspended, staff dispersed, and the Medical and Dental Colleges broken up.

In 1948 I was unwillingly dragged into being Acting Chancellor of the University, but I wanted to run away from administrative work. There are eight different colleges and each college has a Dean. With permission from the Government, I asked the Dean of Deans to take my place, and in June of 1948 I was appointed by the Government as Chief Delegate to the World Health Organization in Geneva.

So far, I have refused all calls to return. I shall stay over here until May 1949 and then I shall return to China.

I have no future plans.

If we may be permitted a comment of a personal nature, Dr. Cheer is most appropriately named, for at no time during his talk was there the slightest suggestion of rancor or martyrdom. Rather, he told his story as if he felt that his own particular experiences were different in character only, and not in degree of intensity, from those encountered by others during the past few years.

MASSACHUSETTS EYE & EAR INFIRMARY

FINANCIAL REPORT

At the Annual Meeting of the Corporation of the Infirmary in February, the financial statements and statistics of the Infirmary were drawn up on large cards for the interest of the new members of the Corporation, as follows:

PERSONNEL IN 1948

Doctors on Active Medical Staff	98
Doctors on Consulting Staff	22
Resident Doctors in training	20
Graduate Nurses	56
Student Nurses	19
Other personnel	198
(Excluding personnel shared with M.G.H.)	
Total	413

SERVICES RENDERED 1948

Out-Patient Clinic visits	74,195	
Emergency Ward visits	5,080	
Free care—out-patients & emergency		25.2%
Patients admitted to hospital	6,610	
Average days' stay in hospital	7	
Total patient days in hospital	49,284	
Free care in hospital		10.5%
Total free care in dollars	$137,015	
Operations	6,093	
X-rays	5,641	
Laboratory examinations	30,324	

FINANCIAL STATEMENTS 1948

We received:	
From patients	$735,558.95
From endowments	104,371.35
From special funds	49,905.45
From Community Fund	40,500.00
Gifts to be spent currently	9,100.00
Other operating revenue	30,181.90
Total	$969,617.65
We spent:	
Salaries and wages	$600,794.36
Other operating expenses	357,279.54
Renovations & new equipment	64,492.50
Total	$1,022,566.40
Total deficit	$52,948.75
Gifts to general funds	$114,880.64
Gifts to Emergency Building Fund	225,561.01
Total gifts	$340,441.65
What we own:	
Cash in the bank & on hand	$38,258.83
What our patients owe us	31,741.98
What others owe us	10,997.11
Supplies in storerooms	15,725.06
Total	$96,722.98
What we owe:	
For material & services	$15,228.98
Services & supplies purchased from M.G.H.	13,148.17
Advance payments from patients	1,569.05
Total	$29,946.20
These are our funds:	
Endowment & funds restricted to special uses	$1,410,821.40
General funds	1,603,420.03
Total	$3,014,214.43

In commenting on these figures Mr. Henry H. Meyer, President of the Board of Managers, stated that over $60,000 had been spent to purchase new equipment and to renovate the hospital buildings. Without these extraordinary expenses there was a $7,000 surplus from operations for the year 1948.

These are the comparative figures for the last 3 years:

Operating deficit
1946—$2,052.22 deficit
1947— 4,074.64 deficit
1948— 7,043.75 surplus
Extraordinary expenses
1946—$ 9,185.00
1947— 37,255.34
1948— 59,992.50
Total deficit for year
1946—$11,237.22
1947— 41,329.98
1948— 52,948.75

Francis S. Hill,
Assistant Director

The Junior League of Boston, Inc. opened a clothing shop—the "Bargain Box"—at 85 Newbury Street on March 15, the proceeds from which are to go to the Boston Eye Bank and other community services sponsored by the Junior League.

The clothes, the League announces, will be sold on a consignment basis, and it is not necessary that one be a member of the League to contribute articles for the shop.

Suman Chaudharie, from the Mungeli Christian Hospital, C.P. of India, is at the Infirmary taking a graduate course in nursing. Mr. Chaudharie graduated as a male nurse from the Presbyterian Medical Center, Miraj, Bombay, Province of India, and has been sent to the United States for further training under the auspices of Dr. Victor Rambo, well-known Ophthalmologist, and of the Christian Church Mission of Mungeli, Bilaspur District, C.P. of India.

After a six-months' course at Wills Eye and Ear Hospital in Philadelphia, Mr. Chaudharie came to the Infirmary for the two-months' graduate nursing course. When he finishes here he hopes to go to London.

Miss Alma A. Gastongnay, R.N., is also taking the graduate course in nursing. She graduated in the first class of nurses at Essex Sanatorium, Middleton, Massachusetts, in 1925. After doing private duty at the New England Baptist Hospital for a number of years, Miss Gastongnay served with the Army Nurses' Corps in the United States and in the European Theatre for a little over three years. While overseas, she was stationed in Giessen, Germany and Udine and Trieste, Italy.

Dr. Albert E. Sloane, Director of the Refraction Clinic, delivered a paper at the Annual Meeting of the National Society for the Prevention of Blindness in New York on March 16. Dr. Sloane's subject was "Problems of the eyes of the school child".

Miss Eileen M. Gilmartin, Instructor of Nurses, attended the Annual Meeting of the National Society for the Prevention of Blindness on March 15, 16, and 17. She went as a representative of the Nursing Staff of the Infirmary.

Two of the Social Service Staff—Miss Ruth Butler, Case Work Supervisor, and Miss Pauline Moor, Pre-School Teacher—spoke at the meeting of the Institute of the Pre-School Blind Child held at the Falmouth Hotel, Portland, Maine on February 24. The meeting was sponsored by the Department of Health and Welfare of the State of Maine.

Miss Butler's topic was "Meeting emotional problems", and Miss Moor's was "Early training of blind children". Dr. Richard J. Goduti, a graduate of the Infirmary in 1946 and now practising in Portland, spoke on "Common eye disorders in the pre-school child".

Miss Ida Latham, R.N., from the London Hospital, England, visited the Infirmary and the M.G.H. the latter part of February. She was especially interested in seeing the Infirmary clinics and operating techniques, and while here watched three of the more unusual operations — separated retina, total laryngectomy, and the fenestration operation. Miss Latham is traveling through the United States, and is planning to go on to Canada to observe in several hospitals under the Florence Nightingale Scholarship.

Perhaps many of you have noticed a sudden increase in the number of interesting items in our "Brief bits" section, starting last month. Credit for this should go to many of the secretaries to the Chiefs of the various Services, to whom we are now sending simple forms each month to be used for jotting down bits of information concerning the Chiefs in question. This method of procuring information from all over the hospital seems to be a convenient and efficient one, and has already shown very satisfactory results. Your Editor wishes to thank each contributing secretary for her kind cooperation.

We are about to add more secretaries' names to our mailing list, and we hope for additional responses in the future.

Brief bits:—

Dr. Henry K. Beecher (*WS* 1934), Chief of our Anesthesia Service, gave two lectures at the University of Kansas Medical Center on April 4. His subjects were "Recent work on the control of pain with drugs" and "Management of traumatic shock". On April 8 Dr. Beecher will speak on "Further experience in the control of pain" at the meeting of the Southeastern Society of Anesthesiologists.

Dr. Walter S. Burrage (*EM* 1927), Chief of MGH Allergy Clinic and Chief of Allergy, Veterans Administration Branch #1, has recently been elected Secretary of the American Academy of Allergy.

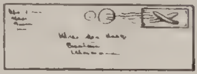
Dr. Don W. Fawcett (*WS* 1943) is one of the 13 new Scholars in Medical Science, appointed by the John and Mary R. Markle Foundation, as part of a five-year program to keep young doctors on the teaching and research staffs of medical schools. Dr. Fawcett's field is microscopic anatomy.

Dr. Chester N. Frazier, Chief of our Dermatology Service, has been appointed an Honorary Consultant to the Army Medical Library by Major General Raymond W. Bliss, Surgeon General of the Army.

Dr. Robert S. Grier (*EM* 1942) has gone to head a division in Industrial and Occupational Medicine at the University of California's Scientific Laboratories in Los Alamos, New Mexico. His work will be partly devoted to research.

Dr. Carroll B. Larson (*Or.* 1938), Assistant Orthopedic Surgeon at M.G.H., was invited by the British Orthopedic Association to go to England for six weeks, beginning March 15. He was chosen as a Boston representative and was asked to come prepared to give two lectures. He will make a tour of the orthopedic hospitals in England and Scotland.

The Class of 1915 of Princeton University has awarded the Class Merit Cup of 1949 to Dr. Joe V. Meigs (*ES* 1921), Chief of Gynecology at M.G.H., for outstanding work and accomplishment.



New addresses:—

Dr. Allen G. Brailey (*EM* 1930), 1180 Beacon St., Brookline 46, Mass.

Dr. Henry S. Fuller (*WM* 1943), Harvard School of Public Health, 695 Huntington Ave., Boston 15, Mass.

Dr. Edward A. Gall (*r.p. P* 1937), Department of Pathology, Cincinnati General Hospital, Cincinnati 29, Ohio.

Dr. Robert W. Gentry (*ES* 1943), 65 North Madison Ave., Pasadena 1, Cal.

Dr. Laurence K. Groves (*WS* 1947), 578 New Post Office Bldg., Columbus 15, Ohio.

Dr. Harriet L. Hardy (*a. M*), Massachusetts Division of Occupational Hygiene, 286 Congress St., Boston, Mass.

Dr. Wilbur A. Sawyer (*WM* 1908), 16 Radcliffe Road, Belmont, Mass.

Dr. Howard B. Sprague (*EM* 1924), 1180 Beacon St., Brookline 46, Mass.

Dr. LeMoyne White (*EM* 1942), 101 Bay State Road, Boston 15, Mass.

Dr. Norman Zamcheck (*P* 1943), Thorndike Memorial Laboratory, Boston City Hospital, Boston, Mass.

Dr. Robert H. Hepburn (*r.s. U* 1943) has taken time out, long enough to send us this note concerning his present activities.

Some time ago you wrote, flatteringly requesting some data from this denizen of that medical fringe that is not M.G.H.

I am gradually getting my teeth, besides my resectoscope, into the urology about Hartford—being on service at the Hartford Hospital, Hartford City Hospital, and the State Veterans Hospital.

Ben White, Starr Lampson, Stew Seigle, and Jerry Green—all ex-MGH—are active workers in our fine new building which is so like the White Building in atmosphere that the incurable MGH virus spurs us the more mightily to make our medicine live up to it.

This letter has come from Dr. Edwin C. Albright (*WM* 1942).

My working address is still Department of Medicine, University of Wisconsin Medical School, Madison.

One more professional hurdle was cleared in the past year with the completion of the examination in October and certification by the American Board of Internal Medicine.

In January I attended a course in radioisotope technique given at the Oak Ridge Institute of Nuclear Studies.

These are the high points of the past few months, which have been filled with other interesting activities—such as medical ward rounds, out-patient work, and some clinical investigation.

My wife, and the two boys (age 6 and 1 1/2), are very happy in Madison. We all will be delighted to see any of the MGH alumni whose steps lead this way.

In response to a note asking for news about himself, came this modest but much appreciated reply from Dr. Harold I. Meyer (*WS* 1925).

Thank you for the opportunity of sending a letter for publication in THE NEWS, but I don't think you had better do that at this time, inasmuch as you published a news item about me just a year ago. I don't want to give anyone the impression that I am seeking publicity.

You may mention, however, that I spent a week last January visiting the clinics at M.G.H. and other medical centers in Boston. I had a most interesting visit, with the chance to see my many friends there.

I am Attending Surgeon at St. Luke's and Cook County Hospitals, and Associate Attending Surgeon at the Children's Memorial Hospital—all of Chicago. I am also Professor of Surgery at the Cook County Graduate School of Medicine, and Assistant Professor of Surgery at the University of Illinois College of Medicine.

This real "family" letter newsy and warm and cordial—has come from Dr. Eugene A. Osius (*WM* 1923).

I read THE NEWS with great interest each time I receive it, and am glad to find here and there letters and remarks from old friends and acquaintances whose friendship was made and enjoyed at the General while I was there. I think Dr. Fred Coller put it very well when he said that having been a house officer of the Massachusetts General Hospital is like having belonged to the finest club in the world, and I look back with a great deal of pleasure, appreciation, and gratitude to the years I spent at the General. The sound teachings of its attending staff, and the congenial and stimulating comradship of its house staff are a fine heritage to have, and one which I know all MGH men cherish highly. The intelligent industry, combined with professional and moral integrity, that is encountered there, remain with one throughout his entire professional career—and longer.

It is now exactly twenty-five years—a quarter of a century—since I left the M.G.H. to come back to my native city of Detroit and to associate myself with Harper Hospital. This is the second oldest hospital in Detroit and, as you of the M.G.H. know, is the hospital from which Base Hospital or General Hospital No. 17 originated during both World War I and World War II. [Will any of us ever forget Dr. Osius's letter about zinnias, rain, bananas, and rats written while he was in the Southwest Pacific?] It is a large private hospital. It does a great deal of good work and has an excellent standing in the community and throughout the country. It has a large staff, many of whom are connected with Wayne University Medical School, where I hold the position of Assistant Professor of Clinical Surgery. I get a great deal of pleasure out of being of some assistance to the students and residents attached to the school and to Receiving Hospital. This latter is a large city hospital with which the school is connected and whose staff I also serve. My other connections are Attending Surgeon to the Children's Hospital of Michigan, and Consultant Surgeon to Herman Kiefer Hospital, the large hospital for contagious diseases and tuberculosis, as well as the Veterans' Hospital at Dearborn, Michigan.

No. 16 in a series of Staff photographs
Dr. Fletcher H. Colby — Chief of Urological Service

Although I was a graduate of the MGH West Medical Service and came to Harper as a medical resident, my interest swung to surgery and, as Dr. Means has often said, I am the only surgical graduate of the West Medical Service that he knows of. My work is confined to general surgery, with particular interest in peripheral vascular diseases—a subject I have been interested in for some twenty-one years—and I watch for and read with great enthusiasm, as well as profit, the many papers which come out of the General from that particular Service. Great credit should be given to that Clinic for pushing ahead the knowledge of medicine in the last fifteen years, for the distinct betterment of mankind, and the solution of many vexing problems which used to fill the chronic wards in many State institutions, only to remain unsolved. There is a big field in the future in this particular phase of medicine and surgery, due to the prolongation of life effected by the at least partial reduction of infection by the antibiotics and other drugs, and young men entering medicine or practice will do well to note the handwriting on the wall.

At the present time we are greatly concerned about the threatened socialistic reform that medicine is supposed to undergo (one might say deform, rather than reform), and, being a member of the Council of Michigan State Medical Society, I am in somewhat close contact with the activities of that particular group. Michigan has been rather outstanding in its activities in behalf of medicine according to the American plan and has been a great proponent of voluntary medical insurance—to my mind, the greatest antidote we have for compulsory health insurance. The State Society has for several years carried on an active Public Relations Program and has asked for and received from its members an annual contribution for that particular purpose which is practically twice that of the annual dues. Many of our members who first objected to this now accept it without question and realize its full value. Wisely and intelligently handled, honestly administered, and used with idealistic attitude of mind, this sort of program can be of great help to the profession and to the public.

There is a small nucleus of MGH men in Detroit and we see each other occasionally. There are several at Harper besides me—Dr. Frederick Kidner (*SS* 1905), Dr. Charles Peabody (*ES* 1917 & *Or.* 1920), both Orthopedic Surgeons, and a new arrival in the city in the person of Dr. Donald Sweeny (*WS* 1941), who is connected with the Riverside Clinic and who has been an excellent addition to the city in general. He is well liked by all who come in contact with him and is doing fine work at his chosen hospital. Send us more like him to practise in Detroit.

My own personal practice goes on apace and I find I am busy most of the time. So many hours are filled with my private practice and a good many extracurricular problems—such as the American College of Surgeons activities, the Chairmanship of the Intern Teaching Committee at Harper Hospital, and various medical societies—that there are a few pointed rejoinders from the family, which consists of my wife and two boys aged fourteen and eleven. I suppose it is the same with all doctors' families. I wonder if these activities would be carried out with the same avidity under a socialized system of medicine. I rather doubt it.

I find recreation in music. Four of us—two surgeons and two internists—meet regularly once a week to play string quartets, and enjoy it immensely. I still recall with pleasure the hours of trio music I had with Curt Tripp (*WS* 1923) and Winthrop Phelps (*Or.* 1922 & *Thd. S* 1923), as well as Louis Wolff (*WM* 1924) in the house officers' quarters. I, as the cello player, received a reprimand from Dr. Faxon for poking holes in the linoleum in the music room of the house officers' flat. After this reprimand I confined the cello to one particular hole in the linoleum instead of sitting in different positions at different times. Difficult is the role of the amateur cellist. He himself complains about the size and bulkiness of the instrument, and the contrariness of the strings; his host complains about the damage to carpets and linoleum floors; and the neighbors complain about the moaning and groaning of what the cellist thinks are the dulcet tones of his undiscovered Stradivarius. But it is fun just the same, and is so absorbing that during the weekly session one forgets the trials and tribulations of a surgical practice. We have recently been trying a few numbers with one of Detroit's outstanding organists, and have been playing some sonatas for two violins, viola, cello, and pipe organ—an interesting combination not frequently heard, and the quartet played part of the musical program on Christmas Eve at St. John's Episcopal Church in Detroit.

For two summers my wife and I have visited the Canadian Rockies, particularly in the region of Yoho National Park, where, with several colleagues of mine and their wives, we did a lot of trout fishing, some mountain climbing, and a great deal of colored movie photography. I have several thousand feet of good color movies which it is a pleasure to show to my friends and to see from time to time ourselves. I am anxiously awaiting the opening of the trout season in Michigan. We have some excellent streams, even if they are very heavily fished.

I have been glad to see occasional visitors from the General who have come through Detroit to give us splendid talks and lectures, and who have been well received by the profession at large. I refer to Dr. Robert Linton, who was one of the speakers at the Michigan State Medical Society annual meeting, and Dr. Joe Meigs, who addressed the County Society at the recent annual Beaumont Lectures. The speakers were very well received and spread considerable luster on the name of the Massachusetts General Hospital, as one would expect. Dr. Means did likewise the year before, and we all hope there will be others from M.G.H. in the future.

This has grown to be a somewhat rambling letter. As I read it over I find I have touched upon many and diverse subjects, and feel that in doing so I send greetings to my good friends and colleagues of all the Services at the General during 1922—January 1924, and in particular to my compatriots of the West Medical Service during that time. Last, but not least, goes my respect and gratitude to the attending men from whom I learned so much and who were always so willing to instruct us house officers. The vivid lessons of medicine and medical practice by Dr. William H. Smith, affectionately known as Big Bill, his kindly interest and uprightness of character stand out as clearly now as they did twenty-five years ago. The congenial, good-natured Ward Rounds with Jerry Blake; the quietly spoken sage remarks and considerate interest of Roger Lee; the stimulus of Dr. Means, and the methodical methods of Paul White and many others—all this makes one feel glad he had the opportunity of being an MGH house officer. That is exactly how I feel. And should there be another twenty-five years, I know I should feel the same at that time.

Once again, my greetings and good wishes.

THE NEWS

No. 79 Boston, Mass. May 1949

On April 18, the Board of Trustees of the Massachusetts General Hospital announced the appointment of Dr. Dean A. Clark to head the Hospital, succeeding Dr. Nathaniel W. Faxon who, having reached retirement age, is retiring as Director after 20 years of distinguished service with the Hospital.

Dr. Clark is a native of Minnesota, 44 years old, and a graduate of Princeton University. His background includes three years as a Rhodes Scholar at Oxford University, England, where he received the degrees of bachelor of arts and bachelor of science in physiology. In 1932 he took his medical degree at the Johns Hopkins Medical School. He served an internship in medicine at the Johns Hopkins Hospital. Later, he was assistant resident in medicine and neurology at the New York Hospital, New York City; National Research Council fellow in neurophysiology at the Cornell University Medical College; intern at Phipps Psychiatric Clinic, Johns Hopkins, and intern at Trudeau Sanatorium, Trudeau, N.Y. Since 1938 Dr. Clark has been engaged in the following activities:

From 1938 to 1939 he was engaged in a survey of group medical practice and medical service prepayment plans in some fifteen cities in the East, South, and Middle West.

In 1939 he became a commissioned officer in the Reserve Corps of the U.S. Public Health Service with the rank of Past Assistant Surgeon, and for two years was engaged in studies of the organization and administration of medical services for the needy by State and local health and welfare departments in New York State and in Minnesota. In 1941 and 1942 he was engaged in surveys for the Public Health Service of medical care and health conditions in war-affected areas in the United States, such as the communities surrounding huge new Army posts and new industrial installations. In 1942-43 he served as Chief of the Hospital Section, Medical Division, Office of Civilian Defense, and Chief of the Emergency Medical Section, U.S. Public Health Service. In this period he was engaged in assisting the States to organize emergency base hospitals to care for civilians who might be injured by enemy action, in recruiting some 2,000 reserve officers for the Public Health Service to serve as the staffs of these hospitals should they be needed, and in setting up and administering arrangements to supply medical care for volunteer civilian defense workers injured in the course of training and practice of their civilian defense duties, and for United States civilians injured by enemy action here and abroad. During this period he held the rank of Surgeon, Reserve.

In 1943-44 Dr. Clark served as the first Chief Medical Officer of the Federal Office of Vocational Rehabilitation where he was responsible for planning, organizing, and administering the medical services for civilians in need of rehabilitation for employment, these medical services having been newly added to the rehabilitation program in 1943 by Act of Congress. At this time he held the rank of Senior Surgeon, Reserve.

In 1944-45 he served on loan to the National American Red Cross as Medical Survey Officer for a committee established by President Basil O'Connor to advise the National Red Cross on medical and health programs it might undertake after the war. Later in 1945 Dr. Clark served for a time as Assistant Chief of the Division of Public Health Methods, U.S. Public Health Service, and during this period accepted a commission as Surgeon in the Regular Corps of the U.S. Public Health Service.

Since August 1, 1945 he has been on leave of absence without pay from the U.S. Public Health Service, serving as Medical Director of the Health Insurance Plan of Greater New York, with the Public Health Service rank of Senior Surgeon in the Regular Corps. During these three years Dr. Clark has been responsible for the planning, development, initiation, and administration of the medical services of HIP.

During 1941-48, Dr. Clark lectured or conducted courses on medical economics and the distribution of medical care in various colleges and universities. At present he is Associate Professor of Public Health Practice at Columbia University and Lecturer in Medical Economics at the University of California, School of Public Health.

Dr. Clark is a Fellow of the New York Academy of Medicine, Fellow of the American Public Health Association, and Fellow of the American Medical Association. He is the author of various articles on neurophysiology, neurology, and psychiatry, and the distribution of medical services.

Dr. Clark will assume the active direction of the Massachusetts General Hospital as soon as he is released from his present responsibilities in New York. During the interim he will study with the trustees and the staff the many problems that confront the voluntary hospital in providing medical service to the community.

With the three-fold responsibility of care of the patient, education, and research the modern teaching hospital is one of the most vital instruments of society. The balance that must be maintained, in order to preserve these functions in accord with the great traditions of the institution, require a quality of judgment for which Dr. Clark's broad experience has prepared him.

The dedication of a newly-renovated Out-Patient Department at the Boston Lying-in Hospital, as a memorial to the late Dr. Franklin S. Newell (*SS* 1896), noted obstetrician and educator and a member of our Staff since 1914, has been made possible by contributions from Dr. Newell's many friends and patients. Dr. Thomas R. Goethals, chairman of the fund-raising program, has announced that the $400,000 campaign has been oversubscribed by more than $19,000.

Dr. Channing C. Simmons (*ES* 1900), former Surgeon-in-Chief of the Collis P. Huntington Memorial Hospital and an Honorary Surgeon on our MGH Staff, was awarded a citation and medal at a luncheon rally of the American Cancer Society in Boston on April 12. He was cited as "a leader who has taught hundreds of young doctors to become interested in cancer and to treat it with new and radically different methods."

The rally was held in the interest of the Society's current month-long campaign to raise $650,000 in Massachusetts as the State's part of the total national goal, to make possible a continued fight against cancer through research and education.

Another, in a long list of honors, has been conferred upon Dr. Marius N. Smith-Petersen (*Or.* 1916), until recently Chief of our Orthopedic Service and now a member of our Board of Consultation. A few weeks ago Dr. Smith-Petersen received the following letter:

7 Melbourne Place
Edinburgh 1.
14th February, 1949

Dr. M. N. Smith-Petersen
266 Beacon St.
Boston, Mass.

Dear Sir,

It is my honour to inform you that on Friday, 11th February, you were elected to Honorary Membership of this Society. This honour is conferred on gentlemen eminent in any branch of Science bearing upon Medicine, whom members of the Society consider worthy to join a number among whom are Oliver Wendell Holmes and Professor Harvey Cushing, and nearer home Lord Lister and Sir John Boyd Orr. We are proud to include you in their ranks, and send you our greetings and admiration.

I am, Sir,
Your obedient servant,
(signed) David S. Alexander
Hon. Secretary,
Royal Medical Society, Edinburgh

Dr. Reginald Fitz (*EM* 1911), Assistant to the Dean of Harvard Medical School, has been made President of the American College of Physicians. He succeeds Dr. Walter W. Palmer (*EM* 1911) who has retired.

A very special tribute was recently paid Dr. George R. Minot (*EM* 1913), Professor Emeritus of Harvard Medical School and, with two other scientists, winner of the 1926 Nobel Prize for the discovery of liver extract as a means of combatting pernicious anemia. At a dinner given for him at the Harvard Club, he was presented with a bound volume of scientific articles written in his honor by research colleagues throughout the world.

SOCIAL SERVICE AFFAIRS V

(*Conclusion of the article by Miss Barbour*)

TEACHING

Teaching has been a responsibility for many years, but has increased with the deepening understanding and use of social facts in care of the patient by all entrusted with that care.

In 1909, the principle was declared that training for hospital social work be given only in affiliation with schools of social work. That year nine students were accepted from the Boston School of Social Work. For 1948-1949 there are thirteen students here in training, representing Boston College, Boston University, Simmons, and Smith Schools of Social Work.

In 1913, the department was requested to cooperate in eight lectures to medical students on social aspects of medicine. This teaching has developed through the years, with additional lectures and class sessions on the case conference basis.

Monthly medical-social teaching conferences with 4th year students on the wards have continued. When Dr. William W. Beckman, who was the medical teacher in this joint project of the Harvard Medical School and the Massachusetts General Hospital, resigned in June to become Assistant Dean at New York University Medical School, his wise and active leadership was keenly missed. Dr. Means appointed Dr. John P. Monks to reassume this teaching duty which Dr. Monks had done prior to the interruption of the war. Dr. Monks has already made a deep impression upon students in this part of teaching. Most of the students work hard and faithfully on their case studies. The give-and-take of this teaching is reflected in the social part of clinical work-up of patients during the student's clerkship on the wards. Students welcome opportunity to discuss skills of interviewing, the relevance and evaluation of social data, the development of the doctor-patient relationship, the influence of the doctor's attitude on patients, the training of professional attitudes, and knowledge of community resources for care of the patient. These are some of the subjects of discussion in these conferences, based on problems which are raised by the students' own case studies. Miss Barbour, Chief of Social Service, and Miss Kellogg assist Dr. Monks in the monthly teaching project. Students gain background for the project from their attendance at weekly medical-social ward rounds, in which Residents ask them to present cases in which they (the students) have done the work-up. Dr. Edward L. Young, Chairman of the Social Service Advisory Committee, has been helpful in his frequent attendance at teaching conferences. Many visitors from our own and from other hospitals, and from other countries have come to observe and share experience in this method of medical education. I am sure Dr. Monks, Dr. Beckman, and Dr. Means agree, as do students, that this emphasis in medical education should have far wider extension into the medical curricula, and at earlier periods in the student's training.

In a special teaching session which Dr. Walter Bauer conducted in December at the hospital with 1st year Harvard Medical students, we arranged a miniature ward conference for amphitheatre demonstration of the hospital team engaged in care of the patient. Dr. Morton N. Swartz, Assistant Resident in Medicine, and Miss Kellogg assisted him. Two patients from the ward were presented in a "live clinic", with a round-up of the medical-social-emotional aspects of their illnesses. Dr. Bauer's impression, in which we agreed, was that this integrated method of teaching, with early stressing of the patient as an individual and some of the arts of medical care, is effective.

In 1912, selected pupil nurses from the Training School received three months' experience in the department. In 1916, lectures were requested for student nurses. Now general lectures, morning teaching clinics, and discussion with individual students on their case studies are the coordinated teaching plan for the department workers and the Nursing School staff.

Lectures to occupational therapy, dietary, and theological students are given during each year.

In 1930, the Richard C. Cabot Education Fund was presented to the hospital to provide opportunities for staff education, seminars, and a part-time educational director. Special study opportunities have been available under the income from this Fund.

Also in 1930, the Richard C. Cabot Library Fund was presented by the American Association of Medical Social Workers. The Richard Cabot Social Service Library, just off Treadwell, is available to all members of the hospital and clinical staff and students.

Education and observation for many social workers and doctors from other countries have been carried on. In the past year, two United Nations Fellows from China spent over a month in the department, and two social workers from England were here under the auspices of the Rockefeller Foundation.

RESEARCH

The third function of the hospital—research—has for years been an integral part of the department's activities, but, as with the hospital, it is beginning to see great expansion, with workers specifically assigned for this purpose. Earliest research projects of the Social Service Department were investigations of social and industrial conditions of working girls made in 1911. In 1913, Dr. David L. Edsall asked for our cooperation in studying 147 cases of lead poisoning. A worker was appointed to secure details of occupation on all male medical patients. "Occupation card" was added to male medical records.

Within recent years medical social workers have been requested to apply their services, special skills, knowledge, and training to medical research projects. This request is an acknowledgment that even in strictly academic medical research, social and emotional factors must be included in order more nearly to approach valid and useful results.

In the past year three full-time and three part-time workers have been assigned definitely to research projects and their salaries paid from special grants. At the request of Dr. Kenneth A. Evelyn, Mrs. Jean Waldstein was assigned as a full-time worker with the research group which is studying diseases involving the autonomic nervous system, with special follow-up study of those patients who had been treated by sympathectomy for hypertension.

Under the United States Public Health Grant to the Pediatric-Psychiatric Services, one part-time and two full-time workers have been hired. One part-time worker, under the Macy Foundation Grant, is working with Dr. Cobb and Dr. Finesinger.

Mrs. Ruth Abrams is now giving half time under a grant from the Massachusetts Division of the American Cancer Society. This study, under direction of Dr. Finesinger and with cooperation of clinicians, is an attempt to understand patients' reactions to diagnoses of cancer, and to study what doctors, nurses, social workers, and families can learn in the management and helping of patients with this diagnosis.

Going on from day to day in regular clinical practice, staff workers and students are analyzing and studying various problems in relation to special medical and social problems. There is still much research to be done on our own methods of social study and treatment in relation to illness, if our services are to be more effective.

The medical social worker can both contribute to, and benefit from, assignment to medical research projects. She can contribute her service and experience in interviewing techniques, in interpretation to patients, and in collection of useful social and personal data. She can help make evaluations as to the efficacy of treatment from the point of view of its success in making the individual a more satisfied, useful, social being.

She can benefit, on the other hand, from learning the standards of accuracy and objectivity demonstrated in a well-run medical research program. She can acquire for, and apply to, her own work certain statistical methods of evaluating the efficacy of social treatment. She can learn much about the importance of complete and accurate social recording for practice, as well as for research purposes.

Josephine C. Barbour,
Chief of Social Service

At the March meeting of the Medical Staff, Dr. Marthe Vogt of the Department of Pharmacology, University of Edinburgh, spoke on "The role of hormones and metabolites in the regulation of adrenal cortical secretion".

OFFICIAL NOTICES

Finance of hospital services rendered for research

An aim of the Hospital is to be a leading center of Medical Research. Current research projects range from laboratory work, with or without live subjects, on the one hand, to the statistical analysis of clinical records on the other. Between these extremes lie many projects which in varying degrees require certain of the Hospital's ordinary services to patients for which the Hospital must expect payment from some source.

It does not seem proper to ask a patient individually to pay for hospital services rendered him primarily for the benefit of a research project. While the Trustees intend to use part of our income from capital and gifts for research, we are obliged to record the amount so spent as accurately as possible and to separate it from the amount spent for ordinary patient care. Failure to do so either increases the costs we must ask all patients or the third parties financing them to pay, or overstates the amount of Free Service furnished the community.

In this connection the attention of the Staff is directed to the following administrative matters:

1. The M.G.H. Special Research Fund

One of the Trustees' mechanisms for assisting with research is the M.G.H. Special Research Fund. This is a segregated portion of our General Fund intended to aid Staff members who do not have outside research funds at their disposal. Applications for grants from this Fund may be made to the General Executive Committee.

2. Clinical services to patients: Return visits, X-ray and laboratory examinations

The authority to grant Free Service to any Service patient undergoing examination, study, or other procedures in any part of the Hospital's premises has been delegated to Admitting Executives. In each instance she must ask the patient to pay according to his means. If he is unable to pay the full amount, the full charge for each item of service is made at regular rates and the uncollectible portion written off as Free Service.

If it is not proper to ask the patient himself to pay, i.e., if the service is primarily for investigation, the doctor ordering the service must arrange a credit of research funds in advance either from funds at his disposal or through application to a grant by the General Executive Committee from the Trustees' Clinical Research Fund, and advise the proper Admitting Officer, Cashier, or Charge Clerk to charge the service against it. The determination of the propriety of charging the patient rests with the doctor.

The return of any patient on an ambulatory basis to the premises of the Hospital is a Clinic Visit. It incurs an Out-Patient Admission Fee, no matter where the consultation may take place; a clinical note must be entered in the record, regardless of the additional special examinations and records which may be made elsewhere. In theory, each such patient should enter through the Admitting Office of the Out-Patient Department. In practice, for the convenience of patient and investigator, that office may arrange for direct entrance through the White Building door upon request.

(The foregoing does not concern the private ambulatory patients of Staff members granted the privilege of seeing such patients within the Hospital. Laboratory, X-ray, Pharmacy, and Operating Room services are available to these patients in the Baker Memorial at private ambulatory rates.)

3. Review of Unit Records

During 1948, 25% of the total number of records pulled by the File Section of the Record Room were for use by Staff members doing research from records either in the Reading Room or in their own offices in the Hospital. The cost of this service, approximately 8¢ per record, has been borne by the Hospital.

4. Registration of research

Each clinical research project conducted in the Hospital must be registered with the General Executive Committee.

The cooperation of each member of the Staff is requested on each of these points. Particularly we wish to avoid embarrassment and inconvenience to patients who come to the Hospital and find themselves delayed by administrative details which could have been prearranged.

PHOTOGRAPHY CHARGES

Effective May 1, 1949, there will be an extra charge of 25% (with a $1.00 minimum) on all *rush* orders given to the Photography Department. A Rush Order is one which the Photographer is asked to deliver within 24 hours of receipt.

This charge has been recommended by the Committee on Photography and Medical Illustration. The Department has been receiving an increasing number of requests for rush service, which disrupts the routine of the organization and increases expenses. Care and planning on the part of those wishing photographic work will allow the Department time to furnish quality service.

N. W. Faxon, M.D.,
Director

SOMETHING BORROWED

We are on our way to a new streamlined procedure for handling laboratory requisitions, reports, charges, etc. This new procedure which has been very successful at the Hartford Hospital in Connecticut, should get under way in the General Hospital, the Baker Memorial, and Phillips House within the next few weeks. The details of our adaptation of this plan have been developed by Assistant Director Haase. In very brief terms, this is how we hope things will work out.

When a patient is admitted, an addressograph plate with the patient's name, address, unit number, and other vital information will be sent to the floor. Whenever any laboratory work is requisitioned for this patient, by using the correct plate in the Addressograph Printer, in one motion all of the necessary identifying information will be applied to a newly designed requisition form. One copy of the requisition will be placed in the record as a "tickler" until the report is received.

All this sounds complex, but in practice we will have reduced the number of forms necessary and will have introduced a means of checking on the progress of laboratory work. We hope this will save time for the doctors and yield better results than our present system.

N. W. Faxon, M.D.,
Director

* * *

THE EDWARD PEIRSON RICHARDSON LECTURE

The first of the Edward Peirson Richardson Lectures in Medical Science was delivered by R. S. Pilcher, M.S., F.R.C.S., Professor of Surgery at University College Hospital, London, in the Bigelow Amphitheater at 5 P.M. on Friday, April 8, 1949. Immediately preceding the lecture a tea was given in the Trustees' Room in honor of the Richardson family and Professor Pilcher, and a portrait of Dr. Richardson by Raymond P. H. Neilson was presented to the hospital. Both the lectureship and the portrait are gifts of Dr. Richardson's sons. It is hoped that the many devoted friends of Dr. "Ned" Richardson who are still inside and outside the hospital will agree that a most appropriate memorial has been chosen. The portrait, an excellent likeness, hangs in the surgical amphitheater at the right of the speaker's platform, on the side opposite the bust of Dr. Henry J. Bigelow. The lectureship, which will enable the hospital from time to time to invite distinguished medical scientists to visit us, perpetuates that living quality of Dr. Richardson.

Professor Pilcher spoke on Bronchiectasis, recounting his surgical experiences with 100 children with this disease. His self-criticism was exemplary. His accomplishments are the more remarkable when it is realized that the work was carried out through the war years, the first cases having been operated upon in 1938.

That Professor Pilcher should have given the first Edward Peirson Richardson Lecture recalls an historic coincidence regarding the founding of the full-time surgical system in two hospitals long bound in close association. It will be recalled that Dr. Richardson was the first full-time surgeon at the Massachusetts General Hospital, having been appointed in 1922 as Chief of the Third Surgical Service and Associate Professor of Surgery at the Harvard Medical School. In the same year, the Rockefeller Foundation selected the University College Hospital Medical School in which to found the first full-time surgical unit in England. Mr. Choyce was selected as the first Professor and Wilfred Trotter was the second. Professor Pilcher succeeded Mr. Trotter in 1937. Dr. Churchill, who succeeded Dr. Richardson in 1931 as the second full-time Professor of Surgery at the Massachusetts General Hospital, introduced Professor Pilcher.

Regarding the association between the University College Hospital (the U.C.H.) and the M.G.H., ether was responsible. Dr. John Collins Warren wrote to his friend Mr. Liston at the U.C.H. of that event of October 16, 1846. In consequence of that letter, the first use of ether for surgical anesthesia on the other side of the Atlantic was at the U.C.H., in December of 1846. Ever since, there have been frequent communications and exchanges between the two hospitals, Mr. Pilcher being the latest.

Oliver Cope, M.D.

On the afternoon of March 21, Ward 4 in the Bulfinch Building was named for its chief benefactor, Mr. Edward Mallinckrodt, Jr.

The program opened in the Ether Dome, where an assemblage of invited guests and members of the hospital Staff listened to addresses given by Dr. Means and Mr. Mallinckrodt himself. Mr. Francis C. Gray, Chairman of our Board of Trustees, presided.

This was followed by the unveiling of a bronze plaque which had been placed upon a wall in the newly-named ward. The plaque bears the following inscription:

> MALLINCKRODT — WARD IV
>
> This ward in which certain patients can be made the subject of prolonged study both to their own benefit and that of others was opened November 4th, 1925.
>
> The impetus given to clinical investigation by David Linn Edsall had much to do with its founding.
>
> On March 21st, 1949, in gratitude for his many benefactions to this ward, it was named for Edward Mallinckrodt Jr.

The occasion ended with a tea in the Medical Staff Room, given by the Ladies' Visiting Committee, with Mr. and Mrs. Mallinckrodt as guests of honor.

Because Dr. Means is the "father" of Ward 4, we have secured from him this short history of the ward.

The advance of scientific knowledge depends upon research. In the field of medicine, research is of two main types. On the one hand, questions are asked of nature in the form of planned experiments set up in laboratories of physiology, biochemistry, immunology, etc., and on the other, advantage is taken of experiments which nature herself offers for solution in the form of patients with various diseases. Study of the latter is called clinical research, or clinical investigation. It requires facilities for the prolonged hospitalization of patients whose cases are to be made the subject of intensive study, and at the same time, adjacent laboratories in which chemical, physical, or bacteriological determinations can be made.

In 1924 an opportunity presented itself to provide such facilities at the Massachusetts General Hospital. At that time the late Dr. David L. Edsall, then Chief of Medicine, obtained a grant from the Rockefeller Foundation to reconstruct and enlarge the Bulfinch Building. Dr. Edsall's successor, Dr. J. H. Means, to whom was entrusted the planning of these alterations, saw to it that there was included a small ward — ten beds — to be used exclusively for research purposes. This ward received its first patient on November 4, 1925. It has been known as "Ward 4", but on Monday, March 21, it was named the "Mallinckrodt-Ward 4" for one of its chief benefactors, Mr. Edward Mallinckrodt, Jr. of St. Louis. The numeral "4" is retained because for nearly a quarter of a century the ward has had a distinguished career under that appellation. In it, pioneer work of a variety of types has been accomplished.

The first use to which the ward was put was the study of lead poisoning. This was then an important industrial hazard. Under the leadership of Dr. Joseph C. Aub, all the important facts of the matter were learned in a relatively short time. How lead gets into the body, what becomes of it, and how it exerts its injurious action was made clear through observations on Ward 4's patients and related studies in animals. The fundamental principles of the prevention and cure of lead poisoning were discovered. As a result, industrial lead poisoning has largely been eliminated. The National Lead Institute financed these studies.

Because of certain similarities between lead and calcium, Dr. Aub's investigations on the former led quite naturally to studies on the latter. In contrast to lead, calcium is a normal constituent of the body. The bones, for example, are largely made of calcium phosphate. The quest, therefore, broadened to include diseases of the bones, and new investigators joined it — Walter Bauer, Fuller Albright, and others. Relationships between bones and endocrine glands became apparent. In the years that have followed, Albright's studies have clarified many problems of diseases of the skeleton and of the endocrines. Diagnosis has been made more precise, methods of treatment have been developed. Most conspicuous among them are the recognition and diagnosis of hyperfunctioning tumors of the parathyroid glands. These organs regulate calcium and phosphorus metabolism, and when they are overactive, the skeleton melts away, the victim shrinks in stature, and his kidneys become ruined by the excess of calcium passing through them. But the condition can be cured by the surgical removal of the parathyroid tumor.

The kidney involvement in hyperparathyroidism led Albright into extensive studies on kidney stones, to the treatment of which he has made significant contributions; and the bony involvement led Bauer into a formidable attack, now of many years' duration, on the pathology of joints and the diagnosis and treatment of chronic joint disease.

Other groups of investigators have made use of Ward 4 for research in various directions. Means and his collaborators have explored the problems of the thyroid. Of late years, extensive use has been made of radioactive iodine in the pursuit of these objectives. The tracing of iodine through the body by labeling is effective in the study of the thyroid, because this gland has a specific avidity for this element. Radioactive iodine also turns out to be useful in the treatment of certain thyroid disorders, because by means of it, radiation can be placed exactly where it is wanted — in the thyroid.

Ever since the ward started, Dr. Chester M. Jones and his colleagues have investigated problems of the liver and digestive tract, and these studies have borne fruit in better methods of both diagnosis and treatment, too numerous to mention. Very recently an exciting advance has been made in the use of certain chemicals known as Tweens, to improve the absorption of fat in certain chronic intestinal disturbances which go by the name of sprue.

At the present time the limelight in medical research is held by cancer and heart disease, and one finds that Ward 4 is playing its part in both these areas. What its future activities will be cannot be foretold, but it is safe to say that so long as problems of disease remain unsolved, and so long as support is generously given, the Mallinckrodt-Ward 4 will continue as active and productive as it has been in the past.

The Board of Trustees, at their meetings on March 18 and April 1, voted to promote:

Dr. William A. Dickson from Clinical Assistant to Assistant to the Children's Medical Service;

Dr. Gordon S. Myers from Clinical Fellow in Medicine to Assistant in Medicine.

To appoint:

Dr. Louis I. Skirball as Assistant Physician to the Children's Medical Service;

Dr. David Stafford-Clark as Assistant Resident in Psychiatry from July 1 to December 31;

Dr. Robert G. Tyson as Assistant Resident on the Children's Medical Service, beginning July 1.

At their meetings on March 16, 23 and 30, and April 6, the General Executive Committee voted to promote:

Dr. Lester J. Bienvenu to the position of First Assistant Resident in Dermatology, beginning July 1;

Dr. Roy W. Leeper to the position of Resident in Dermatology, beginning July 1.

To appoint:

Dr. Henry J. Kowalski as Clinical Assistant in Medicine;

Dr. Herbert K. Magill as Clinical Assistant in Orthopedic Surgery for the period April 1, 1949 to April 1, 1950;

Dr. Andries Querido as Clinical and Research Fellow in Medicine;

Dr. Edgar J. Schoen as Research and Clinical Fellow on the Children's Medical Service;

Dr. Bartlett H. Stone as Clinical Assistant in Surgery, assigned to Gynecology, for the period of one year beginning March 1;

Dr. Anne Wight as Clinical and Research Fellow in Surgery, as of April 1.

The Committee also agreed that the appointment of Dr. Lincoln D. Clark be changed from July 1, 1949 to January 1, 1950.

Two new appointments have been made to plan for and provide better care of hospital equipment. Mr. James Kilcoyne, with his assistants, is now in charge of the appliance room. Miss Rae Simmons, formerly Operating Room Supervisor in the White Building, is responsible for the standardization of equipment on the wards.

Mr. Burnett Reese, a graduate of McLean Training School for Nurses in 1933, has been appointed Assistant Supervisor in charge of orderly service. Mr. Reese has had considerable experience as a head nurse, and as a Chief Petty Officer with the United States Navy from 1942 to 1946.

An important visitor to the School of Nursing during April was Miss Joan Loveridge, who has recently been appointed to the office of Matron and Superintendent of Nursing, St. Bartholomew's Hospital, London, England.

The enlarged Curriculum Committee of the School of Nursing met for the first time on April 12 to review and suggest revisions for the curriculum for the diploma program. New members of the committee include: Mr. Ernest H. Wilkins, President Emeritus of Oberlin College, as Consultant from General Education, and Drs. Myles Baker, Benjamin Castleman, Donald King, Fiorindo Simeone, and Lamar Soutter for the Medical Staff. The representatives from the faculty of the School of Nursing are the Misses Ruth Sleeper, Katherine Hardeman, Norma Larson, Sylvia Perkins, Elinor Stanford, and Jessie Stewart.

The Nursing Service is cooperating with Mr. John Murphy, Head of Pharmacy, in a plan to introduce liquid narcotics throughout the hospital.

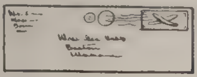
Miss Barbara A. Vadala has been appointed Assistant Ward Instructor in the General Hospital. She will be on the wards to work with and teach the students during the evening period. Miss Vadala graduated from Simmons College School of Nursing and has been employed as a staff nurse on White 7.

* * *

Every once in a while Dr. Clay comes out with a surprising and dry-as-a-covered-bridge bit of original wit. The following example of such is well worth repeating.

While a group of us were having tea one day with Dr. and Mrs. Faxon, someone asked if anybody could identify a flock of spring birds that had been feeding for days on the Bulfinch lawn. After several unsatisfactory suggestions had been given, Dr. Faxon rose and went to get his bird book. He returned with a rather dilapidated volume, and explained its condition by saying that his English setter had chewed the covers off when he was a puppy.

Dr. Clay raised his eyes from his teacup and said in his quiet, slow way, "Well, what could you expect? He was a bird dog, wasn't he?"



Brief bits:—

Dr. Edwin F. Cave (*ES* 1926 & *Or.* 1928), Visiting Orthopedic Surgeon at M.G.H., has been appointed Consulting Orthopedic Surgeon at the Nantucket Cottage Hospital, Nantucket.

Dr. Edwin M. Cole (*r.p. N* 1932 & *r.p. Psychi.* 1934), Associate Neurologist on our Staff, is conducting a lecture course at M.G.H. on "The neurological aspects of language disabilities". This is one of the activities of the Veterans Language Clinic, which is continuing to give very good service to veterans who are disabled in speech.

Dr. Oliver Cope (*WS* 1930), Visiting Surgeon at M.G.H., has been promoted by Harvard University to the office of Associate Professor of Surgery at the Harvard Medical School.

Dr. Clifford J. Straehley, Jr. (*WS* 1947) is to be assigned in the ETO. He will send us his future address as soon as he knows it himself.

Dr. Henry R. Viets, Neurologist at M.G.H., has been made President of the American Association of the History of Medicine for 1948-1950. He will give the Garrison Lecture for 1949 at the Lexington, Kentucky, Meeting in May. Dr. Viets is also Chairman of the Council on Scientific Assembly of the American Medical Association. He is planning to attend the UNESCO meeting in Paris in June as a representative of the A.M.A. He is also planning to attend the Fourth International Neurological Congress in Paris in September, where he will present the work of the Myasthenia Gravis Clinic of Massachusetts General Hospital.

Dr. James C. White (*WS* 1925), Chief of our Neurosurgical Service, has been elected a "correspondant étranger" of the Société de Chirurgie de Lyon, and a "member of honor" of the Société de Neuro-chirurgie de la Langue Française.

* * *

The two sessions of the 1949 Summer School of Pastoral Care at M.G.H. will be held June 6 - July 15 and July 18 - August 26.

From a folder describing the courses, recently published by the Institute of Pastoral Care, Andover Hall, Francis Avenue, Cambridge 38, Mass., sponsor of the Summer Schools at Boston State Hospital, Massachusetts General, Worcester State Hospital, and University Hospital at Ann Arbor, Michigan, we quote the following paragraphs:

> During the first two weeks of each session, there is a program of half-time, volunteer orderly service. Such an experience enables the clergyman to know hospital routine, to become acquainted with patients from the basis of service, and to develop emotional control when confronted with unpleasant situations. . . .
>
> Tested methods of pastoral counseling are explored and clinical experience is provided under the supervision of clergymen who have training and experience in both the parish ministry and in more specialized aspects of the ministry. Actual parish problems are discussed and the relationships of psychosomatic medicine, psychiatry, clinical psychology, and other branches of the healing professions are considered in lectures and seminars. The study of the spiritual resources of illness and the art of ministering to the sick constitutes an essential part of the course.
>
> Daily classes deal with clinical material, parish problems, and clinical theology. Students observe nearly every clinical phase of hospital experience, and attend lectures on medical, surgical, psychiatric, and social service subjects. Most of the time, however, is devoted to supervised calling on the wards and to the recording of these calls for evaluation and interpretation. Reading reports are required during the training periods, and books are suggested for study after completion of the course. . . .
>
> At each training center the Protestant Chaplain will serve as Director of Clinical Pastoral Training and will be assisted by Course Associates. Many of the guest lecturers will be selected from the hospital staffs and affiliated medical schools. Competent religious leaders will be invited to share in the program at each center. . . .
>
> Theological students will be given preferential consideration for admission to the first session at the Massachusetts General Hospital, and ministers and other professional workers with three or more years' full-time experience will be given similar consideration for the second session. . . .

For further information regarding eligibility for enrollment, academic credits, scholarship aid, hours of daily sessions, local preaching assignments, and cost of the courses, communicate with Rev. James H. Burns, Massachusetts General Hospital, Boston 14, Mass.

MASSACHUSETTS EYE & EAR INFIRMARY

An Institute on Eye Care, to give the health workers of Greater Boston an authoritative review of ways to safeguard the good eyesight of this community, was held at the New England Mutual Building, April 13 and 14. The two-day program was arranged by the Massachusetts Division of the Blind, Department of Education, and the Massachusetts Division of Maternal and Child Health, Department of Public Health, with the assistance of the Massachusetts Eye and Ear Infirmary.

Invitations were sent to all public health workers in local city and state agencies, the Visiting Nurses' Association, family societies, Red Cross, children's agencies, vocational and veterans' rehabilitation programs, Catholic and Jewish welfare agencies, and all volunteer agencies in this area interested in aiding the blind. This was the second conference to be held in Boston for the purpose of promoting better eye care, the Institute in April having an even broader program than the first one held in 1947 at the Massachusetts Eye and Ear Infirmary.

Several members of the Infirmary staff took part in the program. Dr. Henry A. Mosher, Senior Clinical Assistant in Ophthalmology, outlined the structure and function of the eye; Dr. Virgil G. Casten, Surgeon in Ophthalmology, pointed out the "Fallacies and misconceptions regarding eyes"; and Dr. Hugo B. C. Riemer, Consulting Surgeon at the Infirmary, spoke on "What constitutes legal blindness", in his capacity as Supervising Ophthalmologist for the Massachusetts Division of the Blind. Dr. Albert E. Sloane, Assistant Surgeon in Ophthalmology and in charge of the Vision Room, discussed "The new picture in Ophthalmology"; and Dr. Sumner D. Liebman, Clinical Assistant in Ophthalmology, outlined "Causes of blindness in adults". Mrs. Eunice W. Wilson, Director of Social Service, was chairman for the final session, and Dr. Brendan D. Leahey, as a member of the Executive Committee for the Boston Eye Bank, outlined the procedures in transmitting eye tissue for the corneal graft operation.

The regular spring meeting of the Board of Managers and Corporation of the Infirmary was held on April 13 in the Ear, Nose and Throat Clinic. As this is the 125th year since the Infirmary first opened its doors to patients, the meeting was an informal observation of this anniversary which makes the hospital the second oldest of its kind in the country.

The Medical Staff was invited to attend

Dr. Dean A. Clark, newly-appointed Director of the Massachusetts General Hospital

the meeting as special guests of the Managers and Corporation.

After a short business meeting which consisted of a recommendation to the Board of Managers that after the first three months of training, residents at the Infirmary receive $500 per year, Dr. Faxon introduced Dr. Frederick H. Verhoeff, Consulting Chief of Ophthalmology, and Dr. Harris P. Mosher, Consulting Surgeon in Oto-Laryngology, who gave their reminiscences on the Infirmary and pointed out its development in recent years. Dr. LeRoy A. Schall, Chief of the Ear, Nose and Throat Service, and Dr. David G. Cogan, Director of the Howe Laboratory of Ophthalmology, outlined the aims of the hospital today, after which two representatives of the Resident Staff — Dr. James M. Sams, from the Oto-Laryngology Department, and Dr. Henry F. Allen, from the Ophthalmology Department — gave their views on what the Infirmary means to the young specialist in eye, ear, nose and throat medicine.

Dr. Harris P. Mosher will be the Guest of Honor at the 82nd Annual Meeting of the Otological Society, Inc. in New York City, which is being held May 18 and 19.

Dr. Philip E. Meltzer, Surgeon in Oto-Laryngology with the Infirmary's Winthrop Foundation and President-elect of the American Otological Society, Inc., is to read a paper on "Surgical procedure — directed toward the alleviation of hearing impairment in children" at the same meeting.

Dr. John E. McKeigue graduated from his residency in Oto-Laryngology on March 31, and is going to be associated with Dr. Charles I. Johnson and Dr. Harold G. Tobey at 403 Commonwealth Avenue, Boston.

Dr. Richard B. Pippitt, whose residency in Ophthalmology was finished on April 30, is to be associated with Dr. Trygve Gundersen, 101 Bay State Road, Boston.

Dr. LeRoy A. Schall, Dr. Philip E. Meltzer, and Dr. Werner Mueller, Assistant Surgeon in Oto-Laryngology, will attend the Examiners Meeting of the American Board of Oto-Laryngology in New York City, May 10-14.

New addresses:—

Major Cecil F. Baxter, MC, AUS (*WS* 1944), 110th Station Hospital, APO 777, New York, N.Y.
Dr. Ching Tung Liu (*r. NS* 1946), Veterans Hospital, Canandaigua, N.Y.
Dr. Charles W. Robertson (*P* 1942 & *ES* 1943), 152 Robbins Road, Watertown, Mass.

Mrs. Frank A. Parker, cystostomy nurse on White 10, passed on to us this letter from Dr. Y. Y. Liu (*clin. fel. U* 1947-48). The letter bears the address 11 Huai Shu Kai, Chengtu 3, Szechuen, China, and reads in part:

> I got the letter containing the photograph you took on White 10 roof and was so glad to see those familiar faces. It made me very homesick for M.G.H. It is a very valuable picture, indeed — especially because it is a colored one.
>
> I wonder if you had another Christmas party this year in the Staff Room, like the one we had last year when I was there on White 10. Our daughters had a three-day holiday at Christmas and they came home, of course, but as we were busy packing at that time we did not have a very swell time. We sent cards to friends, however.
>
> The house we originally used was to be pulled down by the new owner, and on New Year's Day we moved to a new place. It has four rooms and a yard, situated nearer the hospital where I work, and we like it very much. I have one room for my clinic, and I am using things I got from your country when I was at M.G.H. They are verv handy, indeed.
>
> The hospital work has not been very heavy during these last months because of the season — cold winter. We call this winter, but we did not have ice or snow at all. It seldom reaches freezing cold here.
>
> I have a good place to work and in the past three months I have had three prostate cases — all hypertrophy — and had good results after enucleation. I have also had a case of radical cystectomy for ca of the bladder which I did in two stages. The patient went home last Friday.
>
> Conditions in China are growing from bad to worse. There seems to be no peace in the near future and the financial condition is terrible. Inflation grows worse one day after another and everybody is worrying about making a living. I am glad I can have a small practice besides my hospital work because the salary there is almost nothing. I am sending this letter by a friend in order to save something. Each ordinary letter to the United States in new currency G.Y. costs $80, which is worth 10 eggs here; and Air Mail would be G.Y. $320, which equals 40 eggs. You can imagine the struggle we Chinese stand in. My salary from the Hospital is only enough to send 10 to 15 Air Mail letters to the States. But I am happy I am home with my family in this difficult time. Otherwise, my wife would not be able to carry on the home. I am happy, too, that all in our family are healthy.
>
> I have not had a letter from my father for two years. His place in Manchuria was taken by the Communists long ago.
>
> Greetings to M.G.H., and to White 10 especially.

THE NEWS

No. 80 Boston, Mass. June 1949

PSYCHIATRIC SERVICE AFFAIRS

Nineteen forty-eight was an active year, but with Dr. Finesinger taking most of the responsibility in the laboratories and much on the wards, and with Dr. Lindemann running the Out-Patient, the Chief has had little to worry about. Also, there has been an active group of younger psychiatrists eager to work, and five on fellowships who quickly began to pull their weight. The Child Psychiatry Unit has gone ahead extremely well under the leadership of Dr. Lucie J. Jessner. Many fellows have applied for training and she has been able to take on eight — and at one time, nine. This makes a busy and interested group in the Burnham.

As usual, our main problem on the ward is the treatment of hysteria (31 cases), mixed psychoneurosis (27), reactive depression (23), and anxiety states (14). Consultations in the General Hospital have apparently dropped from 644 to 468, but this drop is more apparent than real, because psychiatrists given special assignments have taken up a portion of the consulting work, so that the seeing of many cases is no longer counted as "consultation". The total number of patients seen in the Out-Patient changed but little, the referrals from the various departments being 519 adults plus 185 children, making a total of 704—an average of 58 a month. As in former years, the vast majority of referrals accepted for treatment has come from other departments of the hospital. Less than 10 percent of the patients were accepted directly from the community.

In the Out-Patient Department we have become increasingly aware of the necessity of determined efforts in the direction of preventive psychiatry. A contact which had been established with the Department of Social Relations at Harvard University served as a starting point for the development of an enterprise for a concerted attack on this problem, sponsored jointly by the Department of Social Relations, the Department of Psychiatry of the Medical School, and the School of Public Health. Four members of the staff of the clinic (Dr. Lindemann, Dr. Brewster, Dr. LeMoyne White, and Dr. Van Amerongen) have joined hands with the social anthropologist, Dr. Aberle, and the social psychologist, Mrs. Rosenberg, to develop a service and research agency in a suburban community, for the purpose of studying psychiatric referrals with close scrutiny of the family and neighborhood setting in which they occur. Through a five-year grant from the W. T. Grant Foundation, it has become possible to make a detailed study of the social factors which contribute to the development of psychogenic disorders. A steering committee, consisting of Dr. Hugh Leavell of the School of Public Health, Dr. Walter Bauer of the M.G.H., Dr. Samuel Stouffer, head of the Laboratory of Social Relations, and Dean Francis Keppel, School of Education, are planning with us the policies of this community study. The type of information gained through psychiatric study of the problems in the several families of this suburban community gives us new data and insight.

The past year has been a full one in research activity. Dr. Finesinger's major effort has been in preparing the background for intensive studies on the psychotherapeutic process. Since psychotherapy is initiated in the interview, we have been working on methods for studying language as used by the doctor in doing treatment, and by the patient in response to the words of the doctor. We have completed and are now using an automatic speech analyzer to measure the amount of talk by the doctor and the patient, and the specific arrangement of units of speech throughout the interview. These mechanical aspects of speech are related to the content and the emotional situation of the patient. The work on the effects of anoxia on the behavior of patients and control subjects is continuing. One paper has appeared and four others are in press. The emphasis has been on the effects of low oxygen on performance of subjects, as measured by psychological tests, visual acuity, and the response to flicker fusion. With Dr. Brazier, we have also continued the investigation of the effects of low oxygen upon the electroencephalographic records and upon changes in the electrical field of the brain. Collaborating with Dr. Beecher, she has made some important contributions to the physiology of sleep by showing the shifting of the electrical field when the subject falls asleep. In some of the oxygen studies differences between patients and control subjects have been demonstrated. The effect of carbon dioxide is also being studied.

Clinical investigations have been expanded by increasing collaboration with other hospital departments. With the help of a grant from the Massachusetts Cancer Society we have begun a study of the emotional problems of the patient with cancer, in collaboration with the Huntington Hospital, the Vincent Hospital, and the Social Service Department.

With the support of a grant from the U.S. Veterans Administration to the Orthopedic Department we are aiding in a study on disabilities due to fractures of the wrist. The group in Child Psychiatry is engaged in a study of the emotional disturbances following tonsillectomy, the relation of emotions to nutrition, and gastro-intestinal disorders.

One of our perennial concerns is the evaluation of our therapeutic work. Two studies are nearing completion, which will give us an answer. A follow-up study on patients with anxiety neurosis who have been treated on our wards has been completed. A similar study of patients with hysteria is in progress. These studies have already made contributions to the methods of assessing the status of patients. We hope they will throw light on our therapy and result in more carefully directed methods of treatment.

Stanley Cobb, M.D.,
Chief of Service

Massachusetts General is one of three Boston hospitals to receive large grants from the Lou Gehrig Memorial Fund, an adjunct of the National Multiple Sclerosis Society. The amount allotted to the Massachusetts General Hospital will be used for the myelin degeneration study.

The old chestnut tree on the Bulfinch lawn has never, within our memory, been as lovely as it has been this spring. We thought that you MGH-ers who have trekked to distant parts, but who once knew and loved the old tree, might like to know that neither age nor nature's worst tempests have succeeded in marring its beauty.

The Board of Trustees, at their meeting on April 29, voted to appoint:

Dr. S. Ramachandra as Intern on the Dental Service for one year, beginning July 1;

Dr. Charles V. Robinson as Assistant in Research Biophysics, as of March 1.

At their meetings on April 20 and 27, the General Executive Committee voted:

To promote Dr. Paul L. Sweet to the position of Assistant Resident on the Dental Service, beginning July 1;

To extend the appointment of Dr. William P. J. Peete as Clinical Fellow in Surgery from May 1 to November 1.

To appoint:

Dr. Jarrel G. Burrow as Clinical Assistant on the Dental Service, beginning July 1;

Dr. Timothy B. Counihan as Clinical and Research Fellow in Medicine;

Dr. Robert Dierickx as Graduate Student Assistant in Surgery;

Dr. Arthur B. French as Clinical and Research Fellow in Medicine;

Dr. Charles Mentha as Research Fellow in Surgery;

Dr. Carlo A. Montagnani as Research Fellow assigned to the Blood Bank for one year, beginning March 1;

Dr. Walter W. Point, III, as Clinical and Research Fellow in Medicine for one year, beginning July 1;

Dr. Robert E. Staff as Clinical Fellow in Physical Medicine for six months, beginning July 15.

OFFICIAL NOTICES

At a recent meeting of the General Executive Committee a member of the staff brought up the question of adjusting professional fees for persons of marginal income group who were admitted to the Baker Memorial, citing a specific instance of a patient having an income of $3500, Blue Cross and Blue Shield membership, who was operated upon for tonsillectomy. Blue Shield payment for tonsillectomy is $35, the Baker maximum is $100. This patient was requested to pay the additional $65 which he could ill afford to do; in fact, he would not have been a Baker patient if it had not been for his Blue Cross - Blue Shield membership. The Baker Memorial news letter of March 8 carries a notice from the Baker Memorial Staff Committee whereby such a situation could be adjusted:

"If the Admitting Office feels that the patient's financial condition warrants a reduction, they will so notify the surgeon. If the surgeon feels that the maximum fee is out of proportion to the service rendered, he should notify the Admitting Office as to the fee that should be charged."

The machinery, therefore, exists for the adjustment of these conditions and it is hoped that the admitting officers, physicians, and surgeons will bear this procedure in mind in cases of this sort so that they can be equitably adjusted.

Ferdinand Haase, Jr., M.D.,
Assistant Director

Since April 20 all narcotics have been dispensed in liquid form. While this makes no difference with most of them, codeine is more soluble as codeine phosphate and this is the form in which we are providing it. We would appreciate all staff members writing for codeine phosphate, rather than for the codeine sulphate which we formerly provided.

Charles L. Clay, M.D.,
First Assistant Director

SCOLIOSIS CLINIC

The Scoliosis Clinic is held every Friday morning in the Orthopedic Out-Patient Department. Patients with deformities of the spine, due either to lateral curvature or to juvenile epiphysitis, are admitted from the regular Orthopedic Out-Patient Department or directly from referring physicians.

In this connection, it is very encouraging to note that the number of referrals from School Physicians is steadily increasing. The early detection of the presence of scoliosis makes the treatment much more effective.

After examination in the Clinic, a program of treatment is outlined and the exercise portion of this program is carried out under the supervision of the Department of Physiotherapy. When support is indicated, the proper brace is constructed in our own brace shop.

Scoliosis is much more common in girls than in boys, roughly in the proportion of 8 to 2. Lateral curvature, with a deviation of the spine to the right in the dorsal area and to the left in the lumbar area—the so-called right dorsal-left lumbar curve—also is much more common than the left dorsal-right lumbar curve, and roughly in the same percentage of 8 to 2.

In the last several years, we have been evaluating the results of past treatment with reference to the use of exercise, supports, and spinal fusion. Investigations are under way to correlate the relationship between the development of scoliosis and the rate of growth. We know, for example, that the curve increases most rapidly during the period of rapid growth which takes place at the onset of puberty.

We have at present a yardstick which tells us when spinal growth stops, but we have no ruler to tell us when a particular patient is coming into the period of rapid growth. We are making every effort to find such a ruler.

If a given patient, while under treatment, shows a progressive increase in the curve, fusion operation may be advised and this patient is admitted to the Orthopedic Ward, where surgery is carried out after maximum correction of deformity has been obtained. Recumbency following operation is carried out for a period of six months. The patient is then allowed up in a brace and is returned to the care of the Scoliosis Clinic. Protection of the back is maintained for a period of one year from the time of operation. When X-ray studies show that the fusion is solid, a vigorous program of exercise is carried out, so that the individual can return to normal activity without restriction.

The Clinic runs at a fairly consistent level from year to year, averaging around 400 cases.

Paul L. Norton, M.D.,
Chief of Scoliosis Clinic

* * *

FRANKLIN SPILMAN NEWELL

Dr. Franklin Spilman Newell, Honorary Surgeon at the Massachusetts General Hospital, died in Boston on March 3. He was born in Roxbury in 1871, attended the Roxbury Latin School, and graduated from Harvard College in 1892 and from the Harvard Medical School in 1896. He finished his term as House Pupil on the South Surgical Service at the Massachusetts General Hospital the same year, and as House Physician at the Boston Lying-in Hospital in 1897. He entered practice as the assistant of the late Dr. Edward Reynolds, a member of the Massachusetts General Hospital staff, and was appointed to the staff of the Boston Lying-in Hospital and the Gynecological Service of the Boston City Hospital, serving through the various grades up to the position of Chief of Staff in both institutions. He resigned from the Boston City Hospital in 1916 and from the Boston Lying-in Hospital in 1930. Dr. Newell joined the teaching staff of the Department of Obstetrics of the Harvard Medical School soon after graduating from the Boston Lying-in Hospital and became Professor of Clinical Obstetrics in 1918, resigned his position in 1930, and was elected Professor of Clinical Obstetrics, Emeritus, the same year. He was Consultant in Obstetrics at the Massachusetts General and Beth Israel Hospitals, and a trustee of the Boston Lying-in Hospital. He was a fellow of the Massachusetts Medical Society and the American Medical Association, a life fellow of the American Gynecological Society, a senior fellow of the Obstetrical Society of Boston, a former fellow of the American College of Surgeons, a member of the American Gynecological Club, and a senior member of the Boston Surgical Society. Of the many professional honors accorded Dr. Newell, he valued most highly the presidency of the American Gynecological Society which he held in 1926.

To the Boston Lying-in Hospital Dr. Newell brought the attitude of a trained surgeon. He introduced the use of rubber gloves for pelvic delivery, and he improved the technique and broadened the indications for cesarean section. With the late Dr. E. Granville Crabtree he founded the Urological Clinic, and in collaboration with Dr. Burton E. Hamilton he established one of the first cardiac maternity clinics in the United States. He was among the earliest in this country to alleviate the pains of labor in the first stage by the systematic use of nitrous oxide and oxygen. As an obstetrician he possessed skill, courage, and unfailing judgment; as a gynecologist he was a direct and rapid operator who knew what to do and what to avoid, and his patients profited in consequence.

Dr. Newell belonged to the old school of joint practitioners and teachers who treated their younger colleagues with friendship and consideration. Few men in medical Boston in the last four decades have been held by their juniors in such respect, admiration, and affection. He taught the priceless humanistic aspects of practice by example. He allowed nothing to interfere with his obligation to his patients; their welfare was always foremost in his mind. Of a forthright nature, he detested pretense in others, and his professional and personal life was marked by honor and by honesty.

F. C. I.

* * *

Mr. James ~~John~~ B. Noyes, a trustee of the State Street and Old Colony Trust Companies and a former member of the Boston Transit Commission, died on April 30. His wife, Mary Bartlett Noyes, who died in 1936, was a great-granddaughter of the Reverend John Bartlett who is entitled to the credit for taking the first effective step which resulted in the founding of the Massachusetts General Hospital.

As you may remember, John Bartlett was appointed Chaplain of the Boston Almshouse on Leverett Street in 1807, where he became deeply impressed with the hardships suffered by the insane and the sick poor, due to lack of hospital accommodations. A letter, written in 1839 by Mr. Bartlett, gives a picture of the miserable conditions which aroused his interest and spurred him on to action. The letter reads, in part:

> There were generally from 10 to 20 insane in the house, and although the care was taken of them which the circumstances of the house would afford, yet there was no proper place for their confinement and rest; a 20-foot building, with several cells opening into a long entry, in each of which cells was a board cabin or berth, with loose straw, and a pail for necessary purposes, was their only accommodation. The violent were confined in strait-jackets, and the filth and wretchedness of the place were dreadful. At that time there were no places of refuge for the insane in Massachusetts except in a few private houses in the country, owned and managed by doctors. The mode of managing the insane then was most cruel, and unfavorable to recovery. Whipping, etc. was often resorted to (not at the Almshouse, but in these country places). The physicians at the Almshouse were humane, good men, but the subject of insanity they did not appear to understand; or rather, no facilities were afforded them for the employment of those moral remedies which Pinel and others had so successfully applied in France. This wretchedness of this class of patients and their miserable condition in the Almshouse moved my feelings exceedingly. I gave my mind intensely to the study of the causes and remedies of mania in its various kinds. I went to Philadelphia and New York, examined the hospitals there, read Pinel and all the accounts I could procure of the asylums in France and England. I became deeply convinced of the importance of a similar asylum in Massachusetts. What prompted me to action was, several persons of respectability seized suddenly deranged, and brought to the Asylum, were put in these cells. Among them, a Capt. Jones seized suddenly on Change violently deranged. He was a stranger, commander of a vessel, and instantly put into a strait-jacket, and locked up in one of these cells.
>
> I sat down at my desk and wrote from 15 to 25 billets addressed to some of the wealthiest and most respectable gentlemen of Boston, requesting them to meet at Conant Hall on the Monday evening following (March 8th, 1810), to take into consideration the importance of adopting some measures for the establishment of a Hospital for the insane.

These gentlemen did meet. They became interested. Action thus passed into the hands of men of great local influence. The famous circular letter of Drs. Jackson and Warren was issued. Money was subscribed, and the Massachusetts General Hospital was incorporated in 1811.

A framed copy of John Bartlett's "billet", written on March 9, 1810, and his photograph hang in our Archives Room.

In her will, Mrs. Noyes directed that, subject to a life interest, her trustee "expend $10,000 for the benefit of the McLean Hospital at Waverley" and subject to the same life interest, her trustee shall "use the balance of the principal for the erection of at least one wing of a Nurses' Home in connection with the Massachusetts General Hospital, to be named in honor of my said great-grandfather, Rev. John Bartlett."

Through the terms of Mrs. Noyes's will, the Massachusetts General Hospital becomes the legatee of the Noyes estate, valued at $500,000.

* * *

Brief bits:—

Dr. Edward B. Benedict (*WS* 1926), Endoscopist at M.G.H., participated in the Symposium on the Relationship of Gastric Ulcer to Gastric Cancer, at the James Ewing Society of the Memorial Hospital in New York City on January 14; on February 10, he delivered a lecture on "Endoscopy — Its indications and limitations" before the Pentucket Association of Physicians, at Haverhill, Mass.; in April he talked on "Limits of endoscopy in the diagnosis of cancer" at the George Washington University School of Medicine, in Washington, D. C., and on "The use of the operating gastroscope" at the New York Gastro-enterological Association, in New York City. Recent publications by Dr. Benedict include: "Endoscopy as related to malignant disease of the stomach", *Journal of the National Medical Association,* 40: 250-253, 1948; "An operating gastroscope", *Gastroenterology,* 2: 281-283, 1948; with Dr. Richard H. Sweet (*ES* 1928), Visiting Surgeon at M.G.H., "Benign stricture of the esophagus, with special reference to esophagitis, hiatus hernia, esophageal ulcer, and duodenal ulcer", *Gastroenterology,* 11: 618-627, 1948; "Gastritis", *Current therapy,* pp. 76-78, W. B. Saunders Co., Philadelphia & London, 1949.

Dr. Edward F. Bland (*EM* 1929), Physician at M.G.H., is to make a tour in June of the Army hospitals in occupied Germany, Austria, and Trieste, as Consultant for the Surgeon General of the U.S. Army.

Dr. Richard Chute (*ES* 1929), Associate Visiting Urologist at M.G.H., left in May for a similar tour in the Pacific Area.

Information has come to us, over a circuitous route, that Dr. Willard Dalrymple (*M* 1947) is a Captain in the U.S. Army and has been in Oahu, Hawaii, for about a year. He hopes to be discharged from military service in July, and has an appointment at the West Roxbury Veterans' Hospital.

Dr. Jacob E. Finesinger, Psychiatrist at M.G.H., has been appointed a member of the Division of Medical Sciences of the National Research Council, representing the American Psychiatric Association. Dr. Finesinger has been appointed Professor of Psychiatry and Head of the Department of Psychiatry at the University of Maryland Medical School, in Baltimore. He will take over his new duties on a full-time basis the first of January.

It came to our ears recently that Lt. Frederick C. Goetz, MC, AUS (*M* 1947) is awaiting orders to go to Japan.

Dr. Francis M. Ingersoll (*WS* 1939), Assistant in Surgery at M.G.H., will attend the meeting of the American Society for Study of Sterility, to be held at Atlantic City on June 6.

Dr. Donald S. King (*EM* 1920), Physician at M.G.H., will make a tour in June of the Army Hospitals in the Pacific Area, as Consultant for the Surgeon General.

Dr. Joe V. Meigs (*ES* 1921), Chief of Gynecology at M.G.H., attended the American Gynecological Society meeting at Hot Springs on May 16, where he and Mrs. Ruth Graham, formerly of the Vincent Memorial Laboratory, gave a paper on "The value of the vaginal smear". At the June 6 meeting of the American Society for Study of Sterility, at Atlantic City, Dr. Meigs will give a paper entitled "The surgeon surveys the sterile pelvis". On June 21, Dr. Meigs will leave for Europe. He is to visit France, England, Scotland, Sweden, and Norway. He will attend the Twelfth British Congress of Obstetricians and Gynecologists, to be held in London, July 6-8, where he will present a paper on endometriosis and one on cancer of the cervix. He will also discuss a paper on vaginal smears to be presented by Dr. J. E. Ayre of Montreal.

Dr. Fred A. Simmons (*WS* 1935), Assistant Surgeon at M.G.H., is Chairman of the Program Committee for the June 6 meeting of the American Society for Study of Sterility, and will be a participant in the Round Table discussion on male sterility.

Dr. Somers H. Sturgis (*ES* 1933), Assistant Surgeon at M.G.H., is Chairman of Public Relations for the same meeting, and will open the discussion of a paper by Dr. S. R. M. Reynolds on "The problems in uterine physiology and their interpretation".

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. Edwin B. Dunphy, Chief of Ophthalmology, will attend the meeting of the American Ophthalmological Society at Hot Springs, Virginia, June 1-4, where he will give a paper on "Ocular conditions associated with idiopathic hyperlipemia". He will also be present at the American Board of Ophthalmology examinations in New York, June 11-16.

Dr. LeRoy A. Schall, Chief of Oto-Laryngology, will sail for Europe on June 21, accompanied by Mrs. Schall. He will attend the 4th International Congress of Oto-Laryngology in London, July 18-23. Dr. and Mrs. Schall will land in Italy, where Dr. Schall will give several lectures. From Italy they expect to journey to France and from there to England, returning August 1.

Two papers on retrolental fibroplasia will be given by members of the Infirmary Staff at the Section on Ophthalmology of the American Medical Association meeting at Atlantic City on June 9. Dr. Parker Heath of the Eye Pathology Laboratory will speak on "The retrolental fibroplasia syndrome: A study of its pathology", and Dr. Merrill J. King will speak on "A clinical study of 200 cases of retrolental fibroplasia".

At the same meeting, on June 8, Dr. David G. Cogan and Dr. W. Morton Grant of the Howe Laboratory will take part in a symposium on ocular injuries.

A "bon voyage tea" was given on May 17 at the Nurses' Home for Miss Dorothy M. Tarbox, Superintendent of Nursing, who left on May 20 aboard the *Queen Mary* for the International Council of Nurses Convention in Stockholm, June 12-16. Miss Tarbox will visit friends in England, Scotland, Norway, and Sweden, returning June 21 from Gothenburg on the *Gripsholm.*

Dr. Alfred Kant (*Oph.* 1948) is opening an office at 129 Clinton Street, Watertown, N. Y.

Recent appointments at the Infirmary are Dr. William Stone, Jr. as Senior Clinical Assistant, and Dr. Donald H. Chickering as Fellow in Ophthalmic Pathology.

Dr. Harris P. Mosher's interesting and amusing reminiscences, given at the spring meeting of the Board of Managers and Corporation of the Infirmary, are well worth publishing. Dr. Faxon secured this transcription for us.

> I have been asked to speak of the old days of the Infirmary, to which I belong.

Years ago—I no longer like giving dates—after finishing a surgical house officership at the Massachusetts General Hospital, followed by one at the Boston Lying-in, I settled at the Boston end of Beacon Street, near Brookline, hoping for a practice in general medicine and surgery. This was slow in coming and I switched to ear, nose and throat, as this was a surgical specialty and I had gotten an inkling of it in the throat Out-Patient Department of the Massachusetts General Hospital. Then I went to Germany for a four-months' graduate course in ear, nose and throat. I spent part of my time in Berlin, but where I learned the most was at Halle, on the River Saale, perhaps a hundred miles south of Berlin. Halle was where the mastoid operation was born, at the hands of Schwartze. It was also Handel's birthplace. Schwartze had been dead about three years, but his assistant and successor, Grunert, was carrying on his clinic.

I escaped marrying my landlady's daughter, through no fault of mother or daughter, but I had left a better prospect behind me in America.

The men I came in contact with at the Infirmary were Dr. Jack, Dr. Crockett, Dr. Hammond—but, especially, Dr. Plummer. Dr. Samuel Jason Mixter, from the Massachusetts General Hospital, the father of the Drs. Charles G. and W. Jason Mixter, was Consulting Surgeon for the Infirmary and did the neck surgery, such as tying the internal jugular vein. I helped Dr. Hammond tie the first jugular vein done by a member of the Infirmary Staff. Halfway through the operation, he was on the point of fainting, but soon recovered and bravely finished the operation. I became interested in lye strictures of the esophagus. Dr. Mixter had always handled these cases, but generously handed them over to me.

All my life I have stood helpless before cancer of the esophagus. Within the past few years, the thoracic surgeons, with their chest approach to these growths, have added the first real hope in treating these tumors. Naturally, the treatment of such cases has swung back to the Massachusetts General Hospital.

What I have to say from now on concerns two striking personalities of my time at the Infirmary. One was a large man, the other a small one. I am speaking of physical characteristics, only. The first man was Dr. Plummer, the other is Dr. Verhoeff. Dr. Plummer has been dead many years. You have just had ample evidence that Dr. Verhoeff is very much alive. [Dr. Verhoeff had preceded Dr. Mosher with his own reminiscences.]

Dr. Verhoeff and I have played opposite each other, as they say in the theatre, for many years—especially at the annual dinners of the alumni of the Infirmary. Each has made the other the butt of most of his remarks and the subject of feeble jokes. Dr. Verhoeff was, and is, always positive—and at times, I am. Dr. Verhoeff hails from Yale and Johns Hopkins. During the First World War, on an inspection trip in France, I came upon the building of the Johns Hopkins's Hospital Unit. Over the door of the castle-like structure was the inscription: "God Made Us What We Are". To me, this explained a lot.

You just heard Dr. Verhoeff say, in his talk which preceded mine, that he liked to argue. At lunch in the House Officers' dining room, I never could quite make out whether we went there to eat or to debate.

House Officers' stories should be taken with a grain of salt. Dr. Verhoeff was long a constant and expert tennis player. A favorite story is that any House Officer who beat Dr. Verhoeff at tennis risked his promotion in doing so. Another legend is that at the bedside and in the operating room, Dr. Verhoeff was a past master in the use of vocal anesthesia.

Dr. Plummer gave me my first chance at the Infirmary, but I do not think highly of him for that alone. He was a rugged individual in mind and body, and in action. He had the broad, unpadded shoulders of the athlete. He did not need, like most of us, Clipper Craft clothes. He had a massive jaw and a big fist. He was clean-shaven, and his hair was closely cropped. His surgery was excellent, and up-to-date for those times. He was fond of testing the puny right arms of the flinching House Officers. I took care not to let him test mine.

He looked the part of the professional wrestler and boxer. For a while, he was Muldoon's wrestling partner, and was a lifelong friend of John L. Sullivan. He had his office in Charlestown, off City Square, where one end of the new bridge is to be anchored. His skill and kindness gave him a large following, and his waiting room was always crowded. If any patient, by accident or design, mentioned "John L.", as he was generally called, Dr. Plummer was off at once with stories about him, regardless of the rest of his patients, who either waited an hour or two or went home—but always forgave him.

He took a daily bath, all year round, off the beach in South Boston. Only a solidly frozen harbor prevented his daily swim.

He often carried a loaded cane. Why—with his skill in defense, which included jujitsu—I could never understand.

His ward visits were picturesque, because one or two local boxing celebrities often trailed along behind him. Once, a half-etherized patient broke loose and had almost made the hospital window, to jump for freedom. It was child's play for Dr. Plummer to subdue him and get him back on the etherizing table. No one else in the hospital had the physique to do it.

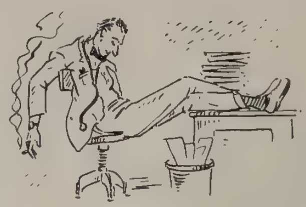
It was a great surprise to me to find that he was one of Boston's first Greek scholars. Once a week he went to Cambridge to see Professor Felton, then Head of the Greek Department at Harvard. Naturally, Dr. Plummer was greatly interested in Greek athletes, and was working on a paper about them, but died with it unpublished.

In his later years, he had a farm in Maine at a convenient distance from Boston. I never could make out that much farming was done there, but he liked the life—especially the animals. He had a pair of oxen, and one day I asked him how he used them. He answered, "I like to see them silhouetted against the sunset sky."

By some members of the staff, there was a raising of eyebrows at Dr. Plummer's striking personality. He had the courage to be himself at all times—a thing which many of us would not dare to do. Those who lifted their eyebrows, I rated then, and still do, far below him as a man.

Dr. Edward M. Plummer

Dr. Robert Trotter started his residency in Ophthalmology on April 1, after being associated with Dr. David G. Cogan in the Howe Laboratory of Ophthalmology as a Fellow in Ophthalmic Research for nine months; and Dr. Hugo Angelini of Clinton, Massachusetts, started his residency in Oto-Laryngology on April 1.



You probably looked for, and were disappointed that you did not find, a second contribution to the newly-launched House Staff column in your last copy of The News. Explanation: there was too little time between the announcement of the new section in the April issue and the deadline date for the May number—too little time for the preparation of an article by any one of our busy House Staff. We trust there will be no further interruptions in the schedule, for, as you read the following article and remember Dr. Rodkey's write-up on China, you will see that we were correct in our presumption that our House Staff has something of significance to say.

To the Editor:

The sketch by Dr. Grillo that heads your new department in The News deserves close examination. There are small details of it not to be passed over unappreciatively. I wonder why Dr. Grillo has his fellow wear a bow tie. The tie-wearing and the non-tie-wearing divisions of the House Staff are notably distinct, if not clearly understood by all observers. This is illustrated by an incident that occurred not long ago in our Emergency Ward. A young lady technician in one of the hospital laboratories cut her finger on a piece of broken glassware. When she presented herself at the E.W. desk she said she had been directed by her superior to request that the injury be treated by "one of the boys without a tie".

Let us back to the picture. A critical evaluation of the pose has been made by some of the staff. One of the critics believes the fellow does not doze, but patiently awaits X-ray reports to be processed.

On the other hand, it seems to me that the young doctor in the drawing does not sleep, but he does dream, half awake. There is a great difference between dreaming asleep and dreaming awake. The former is not reproachable, whereas the latter —which requires more delicate circumstances—has been scoffed at, and its devotees teased by the Philistines. Even Aldous Huxley, who once knew better, classes it poorly: "gossip, daydreaming, and mere self-expression, intrinsically unedifying." It is put in its better light in the closing chapter of *Walden*. "If you have built castles in the air your work need not be lost; that is where they should be. Now put the foundations under them. . . ."

Of course, daydreaming must have its proper time. I think there is only one time for really good daydreaming—during those long minutes that follow the lying down in bed and precede the coming of sleep. A minute is an hour of ideas. Sometimes sleep will overtake one amid those ideas, and sleeping dreams will grow from those of the half-awake. But that is less pleasant than suddenly to be alert, to stop short the free-winging thought, to be swiftly conscious, but for a brief second, that one's mind has been awake while one's body has slept; and then to plunge quickly into dreamless slumber.

Those thoughts-before-sleep are the forms and the perfections, the Entelechy, the may be; for when sleep climbs from the limbs to the brain, we become liberal arbiters.

The morning is clean; the body is rested; and the mind is emptied of the conqueror's schemes, the artist's triumphs, the engineer's plans. The maidens are not so fair in their mirrors as they were in their mind's half-asleep eyes. Sometimes one's head aches.

Elia wrote, understandingly: "Let the most romantic of us, that has been entertained all night with spectacle of some wild and magnificent vision, recombine it in the morning, and try it by his waking judgment. That which appeared so shifting and yet so coherent, while the faculty was passive, when it comes under cool examination shall appear so reasonless and so unlinked, that we are ashamed to have been so deluded; and to have taken though but in sleep, a monster for a god."

There it is—in Dr. Grillo's daydreaming House Officer with the bow tie. The temptation to daydream has won him.

Leonard D. Rosenman, M.D.,
(*ES* 1943 & 1*st asst. r. in S*)

P.S. Your invitation to the House Staff to use these pages has been accepted. Do you agree with Cervantes? "For I am not ignorant of the Temptations of Satan; and of all his Imps, the Scribbling Devil is the most Irresistible."

L. D. R.

Recent gifts to the Archives Department:—

From Dr. Francis M. Ingersoll—a copy of the *Columbian Centinel*, Boston, Mass., Dec. 3, 1817. There is an article on page 1, appealing for funds for the recently incorporated Massachusetts General Hospital.

From Mrs. Samuel Mixter—Dr. Joseph P. Oliver's diploma as Medical House Pupil at Massachusetts General Hospital, 1871. Dr. Oliver was Mrs. Mixter's great-uncle.

From Springer's Flower Shop, Washington Square, Brookline—flowers, once a week, for the Archives Room. When Mr. Springer made his generous offer, it was with the stipulation that there should be no publicity connected with it. He said he didn't expect it and didn't want it. He simply wished to make a friendly gesture for an old acquaintance and for the hospital. However, without Mr. Springer's knowledge until he sees this in print, we decided to tell you who is responsible for the lovely flowers that now grace the table in the Archives Room.

We have always felt that, with attention and pride being understandably directed to the Bulfinch Building, another of our fine old structures has too often gone unnoticed. We are speaking of our Paint Shop, no less—that old brick building which extends along North Grove Street from Cambridge Street to the south end of our Parkman Street parking-lot.

As far as we can find out, it was built in 1810 by Samuel Parkman, a merchant in Boston; and Dr. Washburn, in his *History of the Massachusetts General Hospital*, gives us the story of the building in these words:

"At the time of the death of George A. Parkman, son of Dr. George Parkman . . . , many of the small buildings in the section close by the Hospital had been accepted from his estate in lieu of money bequeathed. By purchase and exchange a large tract bounded by Parkman, North Grove, and Cambridge Streets was secured. When the last of the small buildings upon this area were razed shortly after the close of the War, all that was left standing was the old Market House at the northeast corner of Cambridge and North Grove Streets, and the old wooden house on the southeast corner of Parkman and North Grove Streets. The latter building had been used as the Cement Shop, a storehouse for X-ray records, and then a paint shop. A little later, to increase the parking-yard area, the paint shop was moved to the Market House and the wooden building just mentioned was torn down.

"At different stages of its career the Market House had been a Catholic church (said to be the second of that denomination in Boston), a market house, a picture-frame factory, and in its early days had contained a dance hall used by the youth of Boston's élite when the neighborhood of Allen Street was the 'Court end' of the City. The handsome cupola and weather vane on this building are attributed to Bulfinch. Legend says they were moved there from another building long since destroyed. What this building was and where located is unknown. Unfortunately, it was necessary to cut off forty feet of the Market House when Cambridge Street was widened."

In our Archives file there is a picture of the building as it was before the widening of Cambridge Street, and it is interesting to note that the triangular overhang (or whatever the architects' term for it might be) on the building today, at the corner of Cambridge and North Grove Streets, is an exact reproduction of the corner as it was on the building before the forty feet were cut off.

Dr. Barney, who is particularly interested in our Archives Department and in all matters concerning the traditions of the Hospital, has been browsing about recently inside the Paint Shop. He tells of the enormous beams and other interesting features regarding its construction; and we were delighted when he made the suggestion that an appropriate plaque, giving the history of the building, be placed upon its outside wall. In this way, the old structure will at last receive the attention it so well deserves.

Massachusetts General Hospital has had fourteen directors during the one hundred twenty-eight years of its existence. From 1821 to 1858 the chief executive officer was known as the Superintendent. The title was then changed to that of Resident Physician, and not until 1922 was the term Director adopted.

Captain Nathaniel Fletcher was the first Superintendent of M.G.H. He was a seafaring man who had been supercargo and master of vessels out of Newburyport, in the employ of Moses Brown. His name is on the old list of members of the Marine Society of Newburyport, which he joined in 1807.

If you are surprised that a mariner should have been chosen as the chief administrator of the hospital, Dr. Washburn's chapter on "Administration" in his *History of Massachusetts General Hospital* will serve to orient you to early 1800 conditions. Dr. Washburn says:

> It is a far cry from the day when it was often the case that a physician who was a poor practitioner, a parson who was not a success in the pulpit, or almost any business man with no special training was good enough to be a hospital superintendent. This never did apply to the Massachusetts General Hospital, whose executive officers have always been carefully selected according to the conception of the job at the time. Today it is the rule that hospital administrators go through long periods of training before they can aspire to head important hospitals. This training is usually by apprenticeship, and the position of Assistant Director in our important hospitals is in demand for this purpose. There are also courses in hospital administration given in certain universities and under the auspices of the American Hospital Association. . . .
>
> The early hospitals of our country were patterned after the voluntary hospitals of England. There it was and, in some cases, still is the custom for trustees actually to take a direct part in the details of administration. So in the early rules of the Trustees we find that the twelve Trustees "divide themselves into six Visiting Committees, each to consist of two Trustees and each to serve for two months." The Visiting Committees met once a week at the Hospital. They made "rules and terms for the admission of patients", and admitted and discharged patients at their discretion. Amongst other duties the Visiting Committees "are to visit wards and rooms once every week; shall inquire into the conduct of the Officers and Attendants; examine whether economy be preserved and whether the entries, wards, apartments, beds and linen be clean, well aired and in good order; whether the food be of good and proper quality; and whether the directions of the Acting Physician and Acting Surgeon and their Assistants respecting the patients be carefully, punctually and humanely executed." The Visiting Committee were to do all these things themselves, and records show that they did try faithfully so to do. Thus, at the beginning the Hospital had many managers—each member of the Board, and the Superintendent and the Apothecary. . . .
>
> In spite of this divided authority and multiplicity of bosses and duties, and the small pay, Captain Nathaniel Fletcher—and twenty-one other applicants—sought the job of Superintendent.

Captain Fletcher had been successful as a mariner, and had acquired what was considered in those days a comfortable amount of money, most of which he in-

No. 17 in a series of Staff photographs
Dr. Charles S. Kubik—Chief of Neurological Service

vested in real estate and shipping. Then came the Embargo Act and the War of 1812, during which he lost all of his savings. He sailed various vessels out of Boston, and when he was in command of the ship *Arrow*, in 1812, he was captured and carried into France.

Dr. Washburn's paragraph on Captain Fletcher's incumbency reads:

> Captain Fletcher was made Superintendent of the Hospital on April 1, 1821, five months before it opened, in the "meridian of his life", as one of his letters of recommendation puts it. His wife, the former Betsy Rowe of Newburyport, was made Matron. Their quarters, and those of their successors until 1891, were in the centre of the Bulfinch Building, on the third floor of that structure, with rooms on the second floor in the middle of that building on the north side of the corridor and their parlor on the south side. All these second-story rooms were a part of the Treadwell Library of later date. Captain Fletcher died in office on May 1, 1825.

Our Archives file contains several interesting manuscripts concerning Captain Fletcher. A letter from Moses Brown, dated 1818, highly recommends Captain Fletcher to anyone who needs a shipmaster. Letters from several outstanding citizens recommend Captain Fletcher for the position of Superintendent of M.G.H. and for Mrs. Fletcher for the position of Matron. One letter of recommendation contains this paragraph:

> His wife, I understand, is a healthy woman and very capable to take care of the sick. As to his family, he says he will make such a disposition of them as shall be consonant with the wishes of the Trustees—those of his children that would be useful he would keep with him—the others he would send into the country to live with his friends.

Further information regarding Captain Fletcher's family is furnished in a letter he wrote to the Trustees on April 20, 1822. Apparently, there were six children, three of whom lived at the hospital. In his letter he says that one of them—a son aged fifteen years—is "useful to the institution, to go errands and do many other things where it would take of a man". Three other children were boarding with friends in Quincy, and in this letter to the Trustees, Captain Fletcher asks permission to have another child with him. He writes: "I should wish one of them to come home and live and take turns. That would make them more contented." The Visiting Committee minutes of April 25, 1822 show that his request was granted.

Another letter from Captain Fletcher to the Trustees, written in 1824, says that his salary of $600 a year is not sufficient, and asks for an increase. The letter reads:

> My duty, care, and responsibility is very great, for I am employed from morning till 10 and 11 o'clock at night. Also, my wife's duty is very great, and my son is employed at writing most of his time. An additional sum to my salary would be but small to the Institution but of great benefit to myself and family when I am past labour. I am obliged to economize in all my expenses, and when the quarter comes about, my $125 is all expended for clothing, taxes, schooling and board for my children, etc.

The hospital records show that he was granted an increase of $100 a year.

Captain Fletcher died in office. Our files contain the receipted bill for making his casket. The charge for the casket, with plate and trimmings, came to $28.18.

Visitors to our new Blood Bank quarters will notice a rectangular-shaped window with a single pane of dark red glass, high up on one of the walls of the main room. Dr. Faxon tells us that it has been left there since the time when our Photographic Laboratory occupied this location —a time which Dr. Faxon remembers very well. The window was in the laboratory darkroom.

Important events, concerning Massachusetts General Hospital, that occurred in the month of June during the earlier part of the nineteenth century:

June 12, 1817—By a resolve passed by the Legislature, it was provided that the stone for the hospital should be hammered and fitted for use by the convicts in the State Prison. The work thus done was estimated at over $30,000.

June 6, 1824—A cold and warm salt-water bathing-house was ordered to be erected at the hospital.

June 20, 1825—General Lafayette, with his son and several other distinguished gentlemen, visited the hospital. They were conducted through the several wards and other parts of the building.

June 23, 1844—Plans for two wings for the Bulfinch Building were reported in progress and a Building Committee was appointed.

June 27, 1847—The new east wing was completed, and contributors and the public were invited to visit it. On July 16 the wing was opened for the reception of patients.

June 16, 1858—A second request from Miss Sarah W. Salisbury that she be admitted to the hospital for the study of Medicine was again refused. It was not until June of 1867 that the first female student was admitted.

* * *

A gentleman recently phoned to offer snake venom service for the following kinds: spitting cobra, black-necked cobra, yellow cobra, Egyptian banded cobra, night adder, puff adder, and black mamba.

While it is the administration's duty to inform staff members of this facility, we also intend to restrict its use to those who can show evidence of suitable provocation.

C. L. C.

THE NEWS

MASSACHUSETTS GENERAL HOSPITAL 1811

No. 81 Boston, Mass. July and August 1949

ORTHOPEDIC SERVICE AFFAIRS

Since our last report of Orthopedic Service Affairs in THE NEWS of July 1947, the Visiting Staff remained essentially unchanged until February of this year, at which time Dr. George W. Van Gorder, who for twenty years has been a member of our Visiting Staff, joined Dr. Smith-Petersen in the rank of Consultant. This event was celebrated by a dinner given to Dr. Van Gorder by the Orthopedic Visiting and Resident Staff of the hospital. He was presented with a portrait of himself which will some day be hung with others of the MGH family in our Orthopedic Conference Room on White 5.

It would be difficult to estimate the number of medical students, residents, and postgraduate surgeons who have benefited from Dr. Van Gorder's extraordinary teaching ability. Clarity and ease of presentation, without reference to notes and with obvious complete grasp of the subject being presented, make his lectures and demonstrations models to be emulated. He has always been particularly interested in the management of fractures, and the present enviable position of the Fracture Clinic at the M.G.H. is due in no small part to his efforts. He has also been in charge of the Amputation Clinic, and scores of amputees have been sympathetically and expertly cared for by him. Fortunately, he—like Dr. Smith-Petersen—continues to come to our Orthopedic and Fracture Rounds and participates in the discussion of our case problems. Russell traction cases rarely pass through the door without comment or criticism from G. V-G! The resident who can present a patient with Russell traction correctly applied has passed a difficult test with flying colors.

It is becoming increasingly obvious that fractures treated on the public wards are not a satisfactory cross section of fractures as they occur in the general population, and that it is essential to include industrial accident and private patients if a good teaching clinic is to be maintained. All fracture cases treated in the Baker Memorial Division are used as teaching cases and are called back at the end of a year for end-result study. The Visiting Staff has welcomed the use of these cases. The pros and cons of various methods of treatment are discussed with our accustomed freedom, and the anatomic, functional, and economic end-result is carefully evaluated. Each member of the Resident Staff has a tour of duty in the Baker Memorial, and there is no longer a separate Baker resident. Orthopedic Rounds on Wednesday mornings and Fracture Rounds on Friday mornings continue to be extremely well attended. The Amphitheatre on 3A is no larger than is necessary to accommodate our staff and visitors.

Various clinical research problems continue to occupy a considerable portion of the time of our Visiting Staff. Drs. Armin Klein, Robert J. Joplin, and John A. Reidy have been engaged, for a number of years, in the study of end-results of treatment of slipped upper femoral epiphyses. A method of treatment has been evolved which is definitely superior to previously-recommended procedures. In fact, the results are so good that the accuracy of our end-result study has been questioned. Previously-used methods gave a high incidence of aseptic necrosis of the head of the femur, and limited motion in the hip often occurred. The method now recommended, in the case of patients with minimal slipping of the head of the femur, consists of insertion of a three-flanged nail through a lateral approach, followed by immediate mobilization and relatively early weight-bearing. In those cases where the head of the femur has slipped more than 1 cm., the head is replaced by open operation and is fixed with a three-flanged nail, again followed by early mobilization and weight-bearing. A series of over fifty consecutive cases treated by this method have had excellent anatomic and functional results, with no case of aseptic necrosis of the head of the femur.

During the past year, a study on unequal growth of the lower extremities in poliomyelitis, which has been in progress for over ten years, was finally brought to a close. Drs. Allan J. Stinchfield, Jack Reidy, and the writer of this article, have been able to work out a correlation between the inequality in muscle power and the relative length of the two extremities. It is possible to predict, with a fair degree of accuracy, in children who have had poliomyelitis before the age of ten, the amount of shortening that can be expected. Individual cases show variations of considerable magnitude from the average, but the method of prediction, which is the first of its kind to have been worked out, should prove to be of value in estimating the time at which epiphyseal arrest should be done, in order to equalize leg length.

There are a number of research projects under way at the present time, on which a report will be made at a later date.

The Orthopedic Conference Room on White 5, which was originally designed for our Wednesday morning Staff Rounds, is now being used for small conference groups, third year teaching seminars, etc. It is hoped that this room will eventually be more attractively furnished and be equipped with suitable tables, chairs, filing cases, etc., so that it can be used for reading and research purposes, as well as for conferences.

Joseph S. Barr, M.D.,
Chief of Service

At the annual meeting of the Vincent Club, held at 0 Marlborough Street on May 17, it was voted to give thirty-three thousand dollars this year to the Vincent Memorial Hospital—twenty-eight thousand to be paid over immediately, and five thousand at a later date.

Miss Sarah S. Reed, II as President, Miss Pamela A. Whitney as first Vice-President, and Mrs. George N. Chamberlain, Jr. as second Vice-President will continue in office another year. There were elected Mrs. Atherton Loring, Jr. as third Vice-President, Mrs. Thomas H. Lanman as Treasurer, Mrs. Carl J. Gilbert as Assistant Treasurer, and Mrs. William H. O'Brien as Secretary.

Members-at-large who will serve on the Board of Managers for the ensuing year are Mrs. James Todd Baldwin, Mrs. Malcolm Bancroft, Mrs. Charles F. Choate, Mrs. George A. Parson, Mrs. John B. Reece, and Mrs. George P. Sturgis.

The Nominating Committee, under the chairmanship of Mrs. Charles F. Hovey, includes Mrs. E. Mauran Beals, Jr., Mrs. Arthur H. Brooks, Jr., Mrs. W. Denison Brooks, Mrs. Forrester A. Clark, Mrs. William B. Long, Jr., Mrs. Carleton Pike, Mrs. Philip H. Theopold, and Miss Sarah E. Thorndike.

* * *

At the Massachusetts General Hospital Research Meeting, held on May 6, Dr. Robert S. Schwab spoke on "New drugs in the treatment of Parkinson's disease", and Drs. Oliver Cope, E. B. Gordon, J. F. Hopkirk, and M. Ingebretsen discussed "The pathologic distribution of water and electrolytes in patients, following perforated duodenal ulcer".

At a special Massachusetts General Hospital Research Meeting, held on May 23, W. F. H. M. Mommaerts, Ph.D., of the Department of Biochemistry, Duke University School of Medicine, spoke on "Fundamental problems in muscular and cardiac biochemistry".

OFFICIAL NOTICE

The Blood Bank needs voluntary donors. As the improvements in medical and surgical care advance each year, more and more people require blood, sometimes in large amounts. For many patients donors are unobtainable, or only in small numbers, and cash replacement is impossible.

For this reason, and to provide a wider margin of reserve for emergencies, the Blood Bank requests all who wish to donate blood to call Extension 261 between the hours of 9 A.M. and 5 P.M. for an appointment. The Bank is open Monday, Tuesday, Thursday, and Friday, from 1 P.M. to 4:30 P.M.; Wednesday, from 3 P.M. to 7 P.M.; and Saturday (except during July and August), from 8:30 A.M. to 10 A.M.

All persons between the ages of 18 and 60 may give if the Blood Bank physician finds them fit after a history, an abbreviated physical examination, and a hemoglobin test have been done.

THE GIVING OF YOUR BLOOD MAY SAVE A LIFE.

IT WILL BE OF GREAT ASSISTANCE TO SOME PATIENT.

IT WILL BE A REAL SERVICE TO THE HOSPITAL.

Lamar Soutter, M.D.,
Director of the Blood Bank

Our new X-ray Research Laboratory at Massachusetts General was dedicated on June 2. As principal speaker on that occasion, Dr. Paul D. White made the following remarks:

"In 1914, thirty-five years ago, there was opened in the basement of the Skin Ward, old Ward G, the first laboratory in this hospital for the study of heart disease. This was made possible by a generous friend of the hospital, a patient of Dr. William H. Smith, Mr. Francis Skinner, Jr., who contributed a fund for the purchase and installation of one of the earliest electrocardiographs set up in this country. As the years have passed since that day, a number of other public-spirited benefactors of cardiovascular research have added their names to our honor roll through their individual contributions to research grants and fellowships, apparatus and construction, embodied in our so-called most useful and elastic Cardiac Research Fund. It is a great pleasure to welcome several of these individuals here today and to express to them our great appreciation of their aid, without which our own labors would have been in vain. I would like to emphasize here and now my firm belief in the essential value and need of private contributions to help us doctors in our attack on medical problems which is the first step in the proper treatment and, still more important, in the prevention of disease. Public aid from Congress and the Public Health Service, and help from the larger associations, funds, and foundations are of the greatest importance, of course; but while seeking such help we must not lose sight of the vital worth of private contributions, which not only are a great source of satisfaction to those of our individual citizens who can afford to claim such a stake, but are also of the greatest aid to us in adding to the fluidity of our research funds. We do hope you will continue to aid us, both in general and in particular.

"As our cardiovascular researches and facilities have grown through the years, far outstripping the original technique of electrocardiography, one after another new procedure has been added to our armamentarium. Several of the most important have had to do with the use of roentgen or X-rays, and although we of the old Cardiac Laboratory have been using our own fluoroscope in our researches for many years, we have urgently needed new space and apparatus to develop our research and routine clinical contributions by the skilled use of catheterization of the heart, contrast injection studies of the heart and great vessels, and electrokymography. A team composed of internist (Gordon S. Myers), surgeon (J. Gordon Scannell), and radiologist (Stanley M. Wyman) has already become expert in this field and will carry on in the new laboratory. There is here an illustration of the healthy and promising collaboration of various medical fields, both in research and in the care of patients.

"Happily, a year and a half ago, there came to our rescue Mrs. Louisa Brown who has most generously contributed a large sum for the building on the second floor of the White Building, adjoining and as a new unit of the X-ray Department of the hospital, this beautiful two-room laboratory which is being officially opened today. I am happy to say, also, that this laboratory will serve other X-ray research needs as well as those concerned with diseases of the heart and blood vessels. It is a pleasant foretaste of the new Research Building now contemplated for this hospital."

A tablet, bearing the following inscription, has been placed upon the door of the laboratory:

THIS LABORATORY
WAS MADE POSSIBLE BY
A GENEROUS FRIEND
IN RECOGNITION OF THE
CONTRIBUTIONS TO CARDIOLOGY BY
PAUL DUDLEY WHITE, M.D.

The Board of Trustees, at their meeting on June 10, voted to appoint:

Dr. Benjamin A. Barnes as Third Assistant Resident in Surgery, beginning August 1;
Dr. Ernest S. Crawford as Third Assistant Resident in Surgery, beginning July 15;
Dr. Robert B. Dodd as Assistant Resident in Anesthesia, beginning January 1, 1950;
Dr. Louis F. Johnson, Jr. as Assistant Resident in Anesthesia, beginning July 1, 1950;
Dr. George H. Lawrence as Third Assistant Resident in Surgery, beginning July 15;
Dr. George D. Ludwig as Third Assistant Resident in Surgery, beginning July 15;
Dr. Isaac V. Manly as Third Assistant Resident in Surgery, beginning July 1;
Dr. Edward P. Richardson as Assistant in Neurology and Neuropathology.

At their meetings during May, and on June 1, 8, and 15, the General Executive Committee voted:

To promote:

Dr. Gordon L. Block, Jr. to the position of Resident in Urology, effective July 1;
Dr. Robert B. Higgins to the position of First Assistant Resident in Urology, effective July 1;
The following Surgical Interns to the position of Third Assistant Resident:

Dr. Sigurd B. Gundersen, Jr.
Dr. Talmage W. Nielsen
Dr. Paul S. Russell, Jr.
Dr. Paul Talalay
Dr. Roger E. Wilcox

To continue the appointments of:

Dr. Arthur S. Keats as Assistant Resident in Anesthesia for one year, beginning August 1;
Dr. Albert Michel as Assistant Resident in Anesthesia for six months, beginning September 1.

To appoint:

Dr. Lytle D. Atherton as Second Assistant Resident in Urology, beginning July 1;
Dr. Samuel C. Capps as Clinical Fellow in Pathology for one year, beginning July 1;
Dr. Melvyn J. Gardner as Clinical Fellow in Psychiatry for six months, beginning July 1;
Dr. Buford Hall, Jr. as Clinical and Research Fellow in Medicine, assigned to Cardiology, beginning July 1;
Dr. Joseph L. Koczur as Clinical Fellow in Physical Medicine for the period July 1, 1949 to April 1, 1950;
John R. Reid, Ph.D. as Research Fellow in Psychiatry;
Dr. Frank C. Wheelock, Jr. as Clinical Fellow in Surgery for the month of July;
Dr. Lysle H. Whitmer as Clinical and Research Fellow in Medicine, beginning July 1, to work with Dr. Walter Bauer;
Dr. James G. Wood as Clinical Fellow in Radiology, as of October 1.

The General Executive Committee also voted:

To change Dr. Charles Mentha's title from Research Fellow to Clinical and Research Fellow in Surgery;
That Dr. Edward J. Sennett's status be changed from that of Resident in Radiology to Clinical Fellow in Radiology for one year, beginning July 1.

* * *

PULMONARY CLINIC

The Pulmonary Clinic, which meets once a week, is concerned for the most part with chronic lung disease. The establishment of such a special clinic was recommended by the General Executive Committee and authorized by the Trustees on June 20, 1925. Dr. Donald S. King became Chief of the Clinic in May of 1931. I joined his staff the following month and worked under him until, in the spring of 1942, he left with the 6th General Hospital for active military duty. I was then asked to take over.

The conditions most commonly encountered in the Clinic are pulmonary fibrosis and emphysema, bronchiectasis, neoplasm, tuberculosis, and lung abscess—in about that order. We accept cases referred by sanatoria and other hospitals where they have had a medical work-up. From within the M.G.H., the Nurses' Training School and the Staff Clinic utilize us in a consulting capacity; other patients must have been seen previously on the wards or in the medical clinic. There is a close liaison with Thoracic Surgery, whose out-patient clinic meets at the same time. The distinction of our thoracic surgeons has resulted in many patients being sent to the M.G.H. for possible operation. Most of these people pass through our Clinic, notably patients with bronchiectasis and with demonstrable masses or suspected neoplasms.

An aging population provides us with the problem of degenerative disease—chiefly pulmonary fibrosis and emphysema, an irreversible process in which our function is to attempt to protect the individual from the intercurrent respiratory infections which accelerate the progress of his disease. The effect of prophylactic doses of sulfonamides on cutting down these infections has been studied for the past few winters. A group of patients with fibrosis and emphysema who have had recurrent episodes of winter infections necessitating repeated hospital admissions have been carried from September to June on small daily doses of one of the drugs—usually sulfamerazine—with careful observations of blood counts and urine for evidences of toxicity. One man who was admitted yearly from 1942 to 1946 with pneumonia has now gone through three winters, 1947-1949, without a single disabling infection, and as a result has been able to return to gainful employment.

Bronchiectasis is a prevalent disease. If limited in extent, it may be eradicated surgically. Bronchography, under the supervision of Dr. Lowrey F. Davenport, is utilized in mapping out the normal and diseased areas. Much bronchiectasis is associated with infection of the sinuses, and Dr. Robert L. Goodale has worked with us closely for years in evaluating this aspect of the disease. Appropriate treatment of sinusitis, prior to chest surgery or in association with the medical management of those patients whose bronchiectasis is not amenable to operation, has proved to be of great value.

The problem of cancer looms increasingly large, and that is particularly true of bronchial cancer. Bronchoscopic examinations by Dr. Edward B. Benedict and Dr. Davenport are carried out where neoplasm is suspected. Recently, cytologic studies of the sputum, performed by the Vincent Laboratory, have given added diagnostic assistance.

The status of tuberculosis in the community is, as we all know, changing. The Pneumothorax Clinic, which was opened in 1934, was discontinued in 1945. While it was in operation, it provided the opportunity to follow a small group of patients through this phase of their treatment and to help them in making the transition from sanatorium life to resumption of normal activity. We are still seeing a number of these individuals in the Pulmonary Clinic for prolonged follow-up. Several of the young women have since married, have had healthy children, and have themselves remained well. Chest survey films are now made of all patients admitted to the hospital, and under the auspices of the Staff Clinic all employees are also X-rayed. Many communities and industries also have adopted this practice. In these films the chief problem is that of appraising the asymptomatic disease or process uncovered. The young population is increasingly tuberculin negative. As a corollary to this, the problem of primary tuberculosis in the adult is coming to the fore. The Nurses' Training School, well aware of this, X-rays and tuberculin tests all entering students. Those with suspicious X-rays are referred to us and those whose tuberculin reactions become positive in the course of their training are followed by us. Close observation of these nurses is teaching us more about this disease.

The introduction of chemotherapy in the treatment of lung abscess has resulted in apparent medical cure of many patients whose disease would formerly have required surgical drainage or removal. We follow these individuals closely after their discharge from the medical wards.

The Pulmonary Clinic is carried by a group of clinicians, all of whom are part-time workers at the hospital. We have no funds of any sort, and no fundamental investigation in pulmonary disease is being carried out.

Helen S. Pittman, M.D.,
Chief of Pulmonary Clinic

* * *

ERRATUM

In reporting the death of Mr. James B. Noyes and the gift to the Massachusetts General Hospital of $500,000 which, through the terms of Mrs. Noyes's will, is to be used toward the building of a Nurses' Home, to be named in honor of her great-grandfather, Rev. John Bartlett, Mr. Noyes's first name was given in the June issue of THE NEWS as John, instead of James.

* * *

WARREN LIBRARY

It is of interest to note that Warren Library is more than just a permanent collection of books in a hospital. Ever since its founder, Dr. John C. Warren, left a fund "for the purchase of religious and moral books" to be given to patients upon dismissal from the hospital one hundred eight years ago, the Warren Library has continued to be a distinct and separate adjunct of the M.G.H. which has worked closely with the doctors in the treatment of patients.

The program of the original founder was followed until 1880, at which time the Warren family consented to the purchase of a permanent collection of books to be loaned to patients during their stay in the hospital. This proved to be so popular that by 1882 the service and scope of the library was extended to include not only patients, but "all others connected with the hospital in any way, with the privilege of exchanging books as often as desired".

By 1904 the library had grown to such proportions that, for the first time, a full-time librarian was engaged. And for the first time in any hospital anywhere in the world, as far as is known, bedside library service to patients was begun. After six years of bedside service, it was apparent that a conveyance of some sort was needed to carry the books to the patients. Thus, in 1910, Dr. Washburn designed the book cart which was to be used at M.G.H. This cart was later adopted by the American Library Association as a model hospital book wagon. Dr. Washburn's model is still in use in many hospital libraries today.

GROWTH: From the original collection of Dr. Warren's books which were kept in the Superintendent's Office a hundred eight years ago, Warren Library has grown to over five thousand volumes, with its own repository in the basement of the Bulfinch Building. It is staffed now by three librarians and numerous volunteers.

From gifts to out-going patients, our service has grown to include patients in all parts of the hospital and the ever-increasing family of MGH staff. With the advent of the paper-bound book, and especially since the impetus given to the reading of books by the last war, even the heretofore necessarily neglected contagious wards are now being given bedside library service.

In connection with Bibliotherapy, the Warren Library has recognized the fact that there are people who just don't take to books and reading. And in order to reach these non-readers, the help of the movies, radio, music, and recently of television, has been enlisted in a series of programs to bring these patients into the friendly surroundings of the library itself and thus, perhaps, in a subtle way, to interest the non-reader in books.

The Warren Library has always co-operated with the Psychiatric Department in the treatment of the mentally disturbed. It is our belief that the psychiatric patient must, if he is fully to recover, associate with the mentally healthy on an equal social basis. We believe that the library has much to offer by holding parties and get-togethers, at which all patients may participate in a relaxed and painless way. The Warren Library is always ready to cooperate in the best tradition of its history.

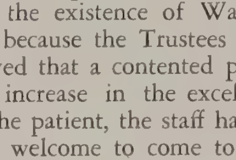
SERVICE: Probably most of you are already familiar with the theories of Bibliotherapy, but for the few who are not a brief word of explanation will, perhaps, give a better understanding of our aims. Bibliotherapy, so says the medical dictionary, is "the employment of books and the reading of them in the treatment of nervous disorders". In a broader sense, it is the fitting to a patient of a book that is sufficiently interesting to him to make him forget his troubles—at least, temporarily—and allow the body to heal, unhindered by extra emotional pressures. The realization that this is possible is being brought more pointedly to our attention with each new stride in the field of psychosomatic medicine.

It is our belief, also, that the actual "fitting process" is of therapeutic value. For here a friendly person—and, to the patient, one disassociated from the hospital—brings to him a bit of the familiar in the form of books and a little extra time for conversation. This person brings, also, the freedom in an almost "choiceless environment" to choose whether he will read or not. And perhaps that very opportunity to refuse may be a factor in returning to a discouraged patient a feeling of self-importance that will be helpful in the process of recovery.

The success of any attempt in Bibliotherapy is dependent not only upon an adequate supply of books and willing bibliotherapists, but also upon the interest and cooperation of the doctors, nurses, and social service workers who come in contact with the hospital patients. Much of this library's success and growth is due to this very same interest and very tangible help from all the professional staff.

Because MGH patients are the primary reason for the existence of Warren Library, and because the Trustees have always believed that a contented personnel means an increase in the excellence of service to the patient, the staff has always been made welcome to come to, and to use, the facilities of the library. Comfortable chairs, and tables full of magazines and newspapers are provided in the library for use of patients and staff alike. The library is open every day except Saturday from 8:30 to 5, and on Saturday from 8:30 to 12, for the circulation of books to the staff. There is no limit to the number of books a staff member may borrow at one time, and no "short term" loans. For the convenience of the staff, the library is cataloged, classified, and arranged as is your public library. Off-duty staff members are welcome, as long as seats last, to come to Wednesday afternoon movies and to watch the television.

Kathleen Sergott,
Librarian, Warren Library



Our second Superintendent was Nathan Gurney, who served the M.G.H. from June 12, 1825 to November 13, 1833. Mr. Gurney came from Abington, Massachusetts, where he had been a Selectman and an Overseer of the Poor for about twenty years. He had also been sent as a representative to the General Court whenever his town sent one.

Our Archives file contains several letters recommending Mr. and Mrs. Gurney to the positions of Superintendent and Matron, respectively, and the minutes of the Visiting Committee say that on July 1, 1825, the Gurneys "took possession of the Hospital . . . and the keys of the building were delivered to them, with the inventory of the furniture."

Mrs. Gurney died at the hospital on March 7, 1829, after a brief illness.

A letter from Mr. Gurney to the Trustees, dated February 20, 1830, reads:

> Holding an Office under the authority of the Board of Trustees of an Institution which has been raised to its present elevated rank among similar Institutions in the Country, by the constant *care, watchfulness* and *exertion* of the Board, therefore, every possible change in any of its internal arrangements may in some degree effect its interests. Having during the considerable time I have been connected with the Institution, been treated by the Board with the greatest respect and kindness (for which I ask permission to tender my grateful acknowledgments) I however have it in contemplation to change my present situation, and to connect my self [sic] with a Lady of this City, and therefore deem it proper to make you acquainted with this intention and to request the favour of the Board that a Committee may be appointed, with whom I may confer, and learn their views, perhaps, better than by submitting any specific proposition.

Apparently Mr. Gurney did not receive a prompt reply from the Trustees, for another letter from him to the Board, dated March 21, 1830, reads as follows:

> In a late communication, I intimated to the Board an intention of changing my present situation, and uniting my self [sic] with Mrs. Elizabeth Fennelly of this City. I was not so explicit in my views at that time, as I should have been, had there not been some uncertainty existing, whether she would be willing to reside in the Hospital, on account of the adverse opinion of some of her friends. Since that time, however, she has come to the conclusion, that she is willing to remove there, and enter upon the duties of that situation, provided she has the approbation of the Board, the opinion of some of her friends to the contrary notwithstanding.
>
> You will permit me, therefore, to enquire whether such a connection would be satisfactory to the Board, so far as the interests of the Hospital are concerned.
>
> If such a course does not comport with the views of the Trustees, it would be pleasant to me, if a verbal intimation could be given instead of spreading it upon their records.

The Trustees must have given him their blessing, for, according to Bowditch, the wedding was celebrated in fine style on March 21, 1830. The House Physicians officiated as groomsmen, and many of the patients were present. "It was a gay scene — one seldom witnessed in a Hospital."

On September 7, 1833, Mr. Gurney sent a letter of resignation to the Trustees, which they accepted with regret.

The last two items in our Gurney file are a letter from him to the Trustees, written in November of 1833, asking for remuneration for two of Mrs. Gurney's carpets which were left on the floors of their "parlour and chamber" in the Bulfinch Building at the request of the Visiting Committee, and a receipt for $6.00 for "certain carpets", signed by Gurney.

Following his resignation, Mr. Gurney became an Alderman of the City of Boston. He died here in 1850.

Our third Superintendent at Massachusetts General Hospital was Dr. Gamaliel Bradford, IV, son of one of the original Trustees of the Hospital.

Dr. Bradford was born in Boston in 1795. He graduated from Harvard College in 1814, and studied medicine at the University of Edinburgh in 1819 and 1820. He practised medicine in Boston until 1827, when he gave up practice and was in business until 1833. He then became Superintendent of the hospital, which position he held until his death in 1839.

Dr. Bradford contributed to several newspapers and magazines, and was actively interested in the anti-slavery cause and in the temperance movement. He was a member of the Massachusetts Society of the Cincinnati, and of the Massachusetts Historical Society. He married Sophia, daughter of Colonel Nathan Rice of Hingham. Their children were Frances, Gamaliel V, and Sarah.

In 1839, following Dr. Bradford's death, the Trustees' Report characterizes him as "a man equally remarkable for strict integrity of purpose, and great independence of judgment."

In our Archives file of Bradford papers are two letters written by him, applying for the position of Superintendent at the Hospital, and his bond for $5,000. A letter from Nathaniel I. Bowditch, Secretary of the Board of Trustees, to Henry Andrews, Treasurer of M.G.H., says that on December 6, 1835, the Trustees voted "that the sum of one hundred dollars be paid to Dr. Bradford for the present year and that hereafter the salary of the Superintendent be raised from five hundred to six hundred dollars" per year.

Other papers of a business nature and a very interesting photograph of Dr. Bradford are in our files.

The fourth Superintendent of the Massachusetts General Hospital was Captain Charles Sumner, whose service was a short one—December 17, 1839 to November 21, 1841.

The Sumner folder in our Archives file contains only a photograph of the Captain, and a letter from his daughter which gives us all the information we have concerning him. The letter reads:

"The Captain Charles Sumner, who was Superintendent of the Mass. General Hospital was my father. He took the position probably while waiting for a ship. The Captains in my father's time were very unlike those of today, as they did the business for the firms for whom they sailed. My father was not a college man, but he was a man of education & culture. He could have made a fortune like many of his friends, but would not smuggle opium into China. . . . He was a cousin of the Senator Charles Sumner."

Colonel John Marston Goodwin was the fifth Superintendent of the Massachusetts General Hospital. His term of service, like that of his predecessor, Captain Sumner, was a short one—March 21, 1841, the date on which Captain Sumner resigned his position, to November 2, 1845.

Our Archives file contains many interesting manuscripts concerning Colonel and Mrs. Goodwin, including a copy of the Colonel's military record, taken from the Roster Books of the Massachusetts Militia officers, and papers having to do with his previous appointment as Steward at the "McLean Asylum for the Insane". Copies of these papers and of letters written by Colonel and Mrs. Goodwin have been set up in print, ready for publication in this issue. Lack of space necessitates withholding them until later.

MASSACHUSETTS EYE & EAR INFIRMARY

At the recent annual meetings of the National Ear, Nose and Throat Societies, Dr. LeRoy A. Schall, Chief of our Oto-Laryngology Service, was elected President of the Broncho-Esophagological Society, Vice - President of the American Board of Oto - Laryngology, and Vice-President of the American Laryngological Association.

Dr. Philip E. Meltzer (*Aural* 1919) was elected President of the American Otological Society, while Dr. Kenneth Day (*Oto-Lar.* 1924) of Pittsburgh was elected Vice-President, and Dr. Gordon D. Hoople (*Oto-Lar.* 1926) of Syracuse was elected Secretary-Treasurer.

At the examination of the American Board of Oto-Laryngology, held recently in New York, Dr. David W. Brewer (*Oto-Lar.* 1948), Dr. J. H. Tom Rambo (*Oto-Lar.* 1948), and Dr. Eugenio Ramero Diaz (*Harvard Postgraduate in Oto-Lar.* 1948) of Cordoba, Argentina, passed the examinations for certification.

The Infirmary's first course in Orthoptics, the study of defects of ocular motility and binocular vision, was completed on June 4 by the following three college graduates: Miss Caroline Densmore of Wellesley College, Miss Carolyn King of Bryn Mawr College, and Miss Marian Rich of Mount Holyoke College. The course is given jointly by the Massachusetts Eye and Ear Infirmary and the Simmons College School of Orthoptics, because of the great demand for these technicians in ophthalmologists' offices.

The weekly Pathology Conferences, presided over by Dr. Parker Heath and attended by doctors from many of the Boston hospitals as well as by the Infirmary's own staff, have been discontinued for the summer months. Dr. Heath will conduct the Lancaster Courses in Basic Ophthalmology, under the auspices of the Ophthalmological Study Council, from June 25 until September 10, at Westbrook Junior College in Portland, Maine.

Dr. V. Everett Kinsey, Dr. W. Morton Grant, and Dr. David G. Cogan of the Howe Laboratory, and Dr. Parker Heath of the Eye Pathology Laboratory attended a meeting of the Association for Research in Ophthalmology in Philadelphia on June 6 and 7.

Dr. Charles I. Johnson gave two papers on May 9, at San Antonio, Texas, on "Intracranial complications of otogenic and rhinogenic diseases" and "The role of the roentgen ray in diagnosis of otolaryngological problems".

Dr. Philip E. Meltzer gave a paper at the meeting of the American Otological Society, held in New York City on May 19, on "Surgical procedures directed toward the prevention of hearing impairment in children".

Mrs. Eunice Wilson, Director of Social Service at the Infirmary, and Miss Beth Eaton, Social Service Worker, will attend the National Conference of Social Work, June 13-20, in Cleveland, Ohio, where Mrs. Wilson will read a paper on "Case work approach to the handicapped child and his parents".

The Board of Managers accepted with regret the resignation of Dr. Philip Mysel, Surgeon in Oto-Laryngology since 1947, and Dr. Lloyd J. Duest, who has served since 1941 as Clinical Assistant in Ophthalmology. Dr. Vincent J. Kelly has been promoted to the rank of Surgeon in Oto-Laryngology to fill the vacancy left by Dr. Mysel.

Dr. Levan Garron completed his fellowship in Eye Pathology on June 1 and has returned to his home at 206 Linda Avenue, Piedmont, California.

Dr. David G. King began his residency in Oto-Laryngology on June 1.

Dr. James M. Sams completed his residency in Oto-Laryngology on July 1 and will return to his home in Johnson City, Tennessee.

Miss Jean Whitelaw, from Toronto, visited the Infirmary June 6-11, observing our methods of working with the preschool blind child. Miss Whitelaw, a representative from the Canadian National Institute for the Blind, plans to visit agencies for blind children in New York City, returning to Boston to attend the summer school for blind babies and their parents at Perkins Institution.

New addresses:—

Dr. Charles C. Derrick (*P* 1940 & *EM* 1942), 25 Maple St., Springfield, Mass.

Dr. Ethel Fanson (*gr. asst.* 1942), 73 El Nido Ave., Pasadena 10, Cal.

Dr. Gilman W. Haven (*dn. s. McL*), 29 Bay State Road, Boston, Mass.

Dr. Robert D. Mattis (*Oph.* 1942), 4474 Westminster Place, St. Louis 8, Mo.

Brief bits:—

Dr. Bradford Cannon, Assistant Surgeon at M.G.H., recently attended the meetings of the American Board of Plastic Surgery and the American Association of Plastic Surgeons, held in Ann Arbor, Michigan. He and Mrs. Cannon and their five children went by car, camping out on the way. They reported that at the honeymoon spots at Niagara Falls, nobody was fooled. Dr. Cannon spent a pleasant and instructive afternoon with Dr. Donald N. Sweeny, Jr. (*WS* 1941) in Detroit.

At the meeting of the American Orthopedic Association, in Colorado Springs, Dr. Edwin F. Cave (*ES* 1926 & *Or.* 1928), Visiting Orthopedic Surgeon at M.G.H., delivered a paper on "The patella", which is to be published later.

At the meeting of the California Medical Society, held in Los Angeles on May 8-11, Dr. Chester M. Jones (*EM* 1919), Physician at M.G.H., gave three lectures—"What's new in Gastroenterology", "Nutritional aspects of anastomotic surgery", and "Gastro-intestinal allergy". At Williams College, on May 16, Dr. Jones talked to the undergraduates on "A career in medicine".

Dr. Terry E. Lilly, Jr. (*ES* 1943) is a Resident in Surgery at the Philadelphia General Hospital. His new address is 5402 Baltimore Ave., Philadelphia 43, Pa.

We have been told that Dr. George F. Odland (M 1947) was released from military service on July 1. He has an appointment as Research Fellow in the Department of Anatomy at Harvard Medical School, beginning the first of September.

Dr. Eugene A. Osius (*WM* 1923) spent a few days at M.G.H. recently, reminiscing with old friends and studying some of our new techniques. If Dr. Osius's visit with Dr. Faxon, which we were in on, is a fair criterion, a good time must have been had by all who came in contact with Dr. Osius while he was here.

Dr. Edward P. Richardson, Jr. (*M* 1943) returned home last January, after a "most wonderful" fifteen months in England, spent partly in Neurology at the National Hospital, Queen Square, London, and partly in Psychiatry at the Maudsley Hospital, London. He is now at M.G.H. again, serving as Assistant in Neurology and Neuropathology. Dr. Richardson has promised us a write-up of his London experiences for an early issue of THE NEWS.

Dr. Howard B. Sprague (*EM* 1924), Associate Physician at M.G.H., has been chosen President-elect of the American Heart Association, to succeed Dr. Harold M. Marvin in 1950.

Dr. Howard P. Wood (*EM* 1948) has moved to Philadelphia, where he will be serving a Residency in Psychiatry at the Pennsylvania Hospital. His address is Pennsylvania Institute, 111 North 49th St., Philadelphia 39, Pa.

We had a most interesting interview a few weeks ago with a patient on White 6. He was Avram Dorion, who was Assistant Director and who plays the leading role in the first of a series of documentary films that are to come out of the new State of Israel. Here is a summary of what Dorion told us:

Before entering the motion picture industry, he had spent some time in central Europe and had been a soldier for four and a half years in the Jewish Brigade in Palestine, while that country was under the British protectorate. He said there were 30,000 Jews in the British Army at that time.

This first motion picture, mentioned above, is called "Dream no more" and, as the title suggests, shows the development of the State of Israel from the embryonic dream to the present actuality. The picture had been completed with the exception of certain shots that needed to be taken in Jerusalem. Dorion, who was living at that time in Tel Aviv, made the hour-and-a-half trip to Jerusalem in an armored car, for the record showed that 90% of all who had attempted that journey had been killed. Although he was attacked by the Arabs on the way, he managed to reach Jerusalem.

Dr. Judson A. Smith, Obstetrician
No. 18 in a series of Staff photographs

On February 22, 1948, the very morning after he had finished the last of the pictures, four huge trucks loaded with dynamite, which had been brought during the night into the square upon which his host's apartment fronted, were exploded. Every building within a wide area was demolished and every living creature killed, except Avron Dorion. He was picked up a while later by members of a first aid squad who had rushed to the scene, and was taken to the Haddassa Hospital—his body lacerated and riddled from head to foot. For nine months he was kept alive by artificial feeding, and eight surgical operations were performed for the removal of pieces of glass and other foreign materials which had been driven deep into his body by the explosion.

Because of the persistent inability to swallow, it was believed that the esophagus had been severed, and the Israeli Government arranged for him to come to the Massachusetts General Hospital in order that Dr. Richard H. Sweet, Visiting Surgeon on our staff, might take over his case. Dorion said that several of his countrymen had already been sent by the government to Dr. Sweet, whose name was therefore well known and was held in a very special kind of high regard over there. Examination here at M.G.H. revealed that the esophagus was not severed, but had become so distorted from the inflamation caused by his injuries that he was unable to swallow. At the time we talked with him he was on the road to recovery, but as we looked at him and saw the cruel evidences of the extent and seriousness of his wounds, we marveled that he was still alive.

After a period of convalescence, he is planning to visit Hollywood to study our American techniques in the art of motion picture making before he returns home. When we asked him if, in addition to the directing of pictures, he will continue to appear on the screen, he said, "Yes—I expect to and hope to. Make-up can do wonders toward covering up my scars, you know."

Dorion said that he, like many who have gone from other countries to settle permanently in Israel, has changed his name to one of pure Hebrew origin. He had already chosen Dorion as a stage name before his accident occurred, and because of the significance of the meaning of the name, his whole family has now adopted it. "Dorion means 'a present' or 'a gift'," he said, "and my life being saved, after what happened, seems like nothing short of a present to me."

This very interesting letter has come from Lt. Thomas H. Green, Jr., MC, AUS (*WS* 1947).

Although my wife and I eagerly await the coming of each month's News, I am ashamed to say that this is the first letter I've written since leaving the M.G.H. last June, to serve two years in the Army. Now that we are temporarily living on foreign soil, the arrival of the latest issue (one was forwarded to us just the other day) is an even greater event. At any rate, I don't wish to postpone any longer sending our thanks for all the pleasure we've derived from each copy.

Until this past March we were stationed at Fort Ord, California, situated on the Monterey Peninsula, about one hundred miles south of San Francisco. Any of you familiar with that region know what a beautiful spot it is; and, as the Station Hospital located there was a very active one, we spent an enjoyable eight months from all standpoints.

In March, on rather short notice, and along with most of the other medical officers in the same group, we received overseas orders. In our case it meant Germany, and we barely had time enough to pack up and make the trek to New York before sailing. We had a very pleasant and uneventful voyage, and landed in Bremerhaven on Easter Sunday morning.

In this first month in Germany I have run across a great many HMS graduates, and a number of MGH-ers, as well. Nearly all the surgeons were sent initially to the 98th General in Munich, and there I found a couple of classmates finishing their two-year hitch. In addition, Cecil Baxter (*WS*, vintage 1944, I believe) had only recently departed from the 98th, and John Sosman was about to leave and must by now be on his way to the M.G.H. to start a residency in X-ray. Incidentally, they were still talking about the visits paid them by Dr. Cope and Dr. Beecher, at the 98th. Cliff Straehley (*WS* 1947) arrived in Munich shortly after I did, and we spent about two weeks there. We were subsequently reassigned — Straehley was sent to Giessen and I came back to Bremerhaven, both as Chiefs of Surgery at the respective Station Hospitals.

A week ago the OB Consultant from the 97th General in Frankfort flew up here to see a patient, and he turned out to be Major George Rafferty, HMS '29 and formerly at the Boston City Hospital. With him was Bill Brewster, currently an anesthetist at the 97th, but planning to start a residency in Anesthesia at the M.G.H. in October. So it appears to be a small world over here, too!

The 319th Station Hospital here in Bremerhaven is housed in the former German Naval Hospital and, as might be expected, is a very nice place in which to work — fine equipment, imposing red brick modern buildings, beautiful grounds, etc. We average about 300 patients, which should keep 7 medical officers moderately busy during the coming year. In addition, there are a few German physicians working here — most of them well trained, conscientious, and eager to learn American ideas and methods.

You have undoubtedly heard in detail about postwar Germany from Dr. Cope, Dr. Beecher, and others who may have been over, so I won't attempt to describe the little I have seen of it, except to say that Germany is a very beautiful country and every bit as picturesque as we had imagined. There remains plenty of evidence of the war, particularly in the larger cities, but it is amazing what has been done in the way of reconstruction in a few years. The people seem healthy, cheerful, and reasonably prosperous, for the most part — at least, in the American Zone. Of course, the lifting of the blockade is the most recent event of general interest over here, although it took place quietly enough. The Air-Lift had certainly grown to be something of tremendous importance, from both economic and political standpoints. I had no real idea of the magnitude of the operation until I stood on the Autobahn across from the Rhein-Main Airfield near Frankfort one day and saw the sky literally dark with hundreds of planes flying to and from Berlin on the shuttle.

Our address until June 1950 will be:

319th Station Hospital
APO #69
c/o Postmaster
New York, N. Y.

and we certainly will welcome future issues of The News, and any letters that might be written.

THE NEWS

No. 82 Boston, Mass. September 1949

FREDERIC A. WASHBURN

> "The noble acts which he did and his greatness, they are not written: for they were very many."

From 1897 to 1934—a period of thirty-seven years—Dr. Washburn was connected in one position or another with the active direction of the Massachusetts General Hospital. From 1934 to 1949 he served as an honorary member of the Hospital Committee of the Trustees.

Great personalities build great institutions and, conversely, great institutions attract great men and women. Such institutions acquire personalities as real as those of individuals. If the personality of the institution is one of high idealism it repels the weak and insignificant and retains only those personalities worthy of its own ideals. Thus, to be associated for so long a period with such an institution as the M.G.H. speaks well of the character of that individual.

Dr. Washburn was a master of organization and detail; calm, judicial, keen, thoughtful, and farsighted; unswerving in integrity, with high ideals and committed whole-heartedly to the welfare and development of the M.G.H. The growth of this institution during the present century and its standing among the great hospitals of the world is due in no small degree to the personality and achievements of Dr. Washburn.

He was thought by many to be an austere and unfriendly person, due mainly to his military bearing and reserved manner. Acquaintance uncovered a man of many sympathies, kindly, friendly, and humorous. He demanded of his associates unswerving loyalty and integrity and in return gave unswerving friendship and support. Exacting of others, he was even more severe and critical of himself. His intimate friends affectionately called him "Gen" and his associates "Colonel", in reference to his really distinguished military service. To all others he was Dr. Washburn. He was universally respected and admired.

Dr. Washburn was born in New Bedford in 1869. He graduated from Amherst College in 1892 and was awarded an honorary M.A. degree in 1928. He received his medical degree from Harvard in 1896 and was immediately appointed as House Officer on the South Surgical Service at the M.G.H., graduating in 1897. He served as Assistant Resident Physician for part of 1899 and from 1903 to 1908 when he became Resident Physician and later Director (the same position under a new name), serving until his retirement in 1934. In 1915 he was appointed Director of the Massachusetts Eye and Ear Infirmary, filling a dual post in the two institutions until his retirement.

His distinguished military career began as Surgeon and First Lieutenant with the 6th Massachusetts Volunteers, serving in the Porto Rico Campaign of 1898-99, and then as Assistant Surgeon and Captain with the 26th U. S. Volunteers in the Philippines from 1899 to 1903. As Major, he organized and commanded Base Hospital No. 6 during World War I until promoted to Colonel and placed in charge of all United States hospitalization in Great Britain, for which he received the Distinguished Service Medal from the American Government and the Order of St. Michael and St. George from the British.

Under his wise and skillful direction the M.G.H. expanded in many ways: Orthopedic Ward I in 1907, Walcott House, a new nurses' home, in 1913, the combined Wards A and F in 1915, the Moseley Memorial Building in 1916, the Phillips House in 1917, the remodeling and fireproofing of the Bulfinch Building in 1924 and 1926, the Connecting Building with the Massachusetts Eye and Ear Infirmary in 1927, and, finally, the Baker Memorial in 1930, represented the major physical improvements carried on under his direction.

He instituted a new administrative organization with representative Medical, Surgical, and General Executive Committees, and a staff organization with Service Chiefs, to obtain continuity of policy in the treatment of patients and in medical research, resulting in better care for patients and a tremendous stimulation to the scientific spirit of research.

Probably the greatest achievement of Dr. Washburn's civilian career was the founding of the Baker Memorial Hospital for the care of people of moderate means with hospital charges at cost and a limited professional fee. This project attracted wide support on his contention that "The Phillips House is for the rich, the General Hospital for the poor, but there is no haven of medical care for those of moderate means."

Following his retirement, by reason of reaching the age limit for Director as fixed by the Trustees, he was appointed Commissioner of Institutions for the City of Boston, serving in that capacity for two years. He then became Director of the Cambridge Hospital, now called Mount Auburn Hospital, from 1937 to 1946 when he retired from active hospital administration.

He left the impress of his personality and ability as an administrator upon all the institutions with which he was connected: the Massachusetts General Hospital, Massachusetts Eye and Ear Infirmary, Cambridge Hospital, and the Long Island Hospital of Boston. He was President of the American Hospital Association in 1913, and in 1932 was made a member of the Council on Medical Education and Hospitals of the American Medical Association, serving for several terms. For a number of years he was President of the Medical Superintendents' Club, composed of the administrators of the leading hospitals of the United States and Canada, and of the Hospital Superintendents' Club of New England. A member of the Massachusetts Society of Mayflower Descendants, he was at one time its Governor.

Dr. Washburn died at his home, 190 Bay State Road, on August 20, 1949. His has been a distinguished career. "He was a good man and just."

N. W. F.

⁂

Professor Ian Aird of the Postgraduate Medical School of London will deliver the next Edward P. Richardson Lecture on November 3. His subject will be "The surgery of gastro-duodenal haemorrhage".

⁂

Dr. Clemens E. Benda, Assistant in Psychiatry at M.G.H., is a member of a team which, under the auspices of the Unitarian Service Committee, left on June 29 for a two and one-half months' study tour in Germany. The Committee has established an Institute for Child Education and Care in Voehl, Hessen, where three seminars, of three weeks' duration each, will be held so that German delegates may learn American methods of child education and psychiatric care in the way of organizing child guidance clinics, psychiatric out-patient clinics, and the handling of juvenile delinquency. At the same time, the team intends to study psychiatric conditions of the youth in Germany.

Dr. Benda will attend the International Neurological Congress in Paris, September 5-10.

Two more members of our staff—Dr. Duncan E. Reid, Assistant Obstetrician, and Dr. Hermann B. F. Seyfarth, Assistant Dental Surgeon — were sent to Europe this summer by the Unitarian Service Committee. They conducted courses in Germany to bring displaced physicians, dentists, and pharmacists up to date in their fields.

STAIGE DAVIS BLACKFORD

Dr. Staige Davis Blackford (*EM* 1927), professor of the practice of medicine at the University of Virginia, died July 17, 1949, at the University Hospital, following a heart attack which had occurred two weeks before. He is survived by his widow, Lydia Fishburne Blackford, and by a son and a daughter.

Dr. Blackford belonged to a family long prominent in Virginia and the South in education and in medicine. Throughout his life he was a leader. He was prominent in student affairs during his undergraduate days at the University—as captain of the football team, as president of his class in medicine. After further training at the Massachusetts General Hospital, he returned to a teaching career at his *alma mater,* where he served on the faculty for twenty-one years. At the time of his death he was Chief of Gastro-enterology at the medical school. He was the author of numerous publications in the field of internal medicine and had made notable contributions in connection with tularemia. He was a Fellow of the American College of Physicians, a member of the American Clinical and Climatological Association, and a trustee of the Episcopal High School.

During the first World War, Dr. Blackford served with the University of Virginia section of the Army Ambulance Service and was decorated by France with the Croix de Guerre. In World War II, he was instrumental in organizing the 8th Evacuation Hospital, with which he served as Chief of Medicine in the North African and Italian campaigns, and received at the hands of General Mark Clark the Legion of Merit. Members of the 6th General Hospital will vividly recall the warm welcome they received from Dr. Blackford and the 8th Evacuation Hospital on their arrival in Casablanca in February 1943.

To the undersigned, Dr. Blackford's passing brings to a close an association and friendship of college days, cherished through medical school, internship, and World War II. The University of Virginia has lost a distinguished son, the M.G.H. a loyal alumnus.

E. F. B.

MAYO HAMILTON SOLEY

The Massachusetts General Hospital takes a sustained and lasting interest in the careers of her sons and daughters. She takes maternal pride in their accomplishments. When one is tragically snuffed out at the height of creative achievement, as was, on June 21 last, Mayo Hamilton Soley (*EM* 1935), her heart is full of sorrow.

Dr. Soley's career was a brilliant one. Following his internship here, he went to the University of California, where he remained on the full-time staff until 1948, when he became Dean and Professor of Medicine at the Medical College of the State University of Iowa.

At California, Dr. Soley steadily rose from the rank of Assistant in Medicine to that of full Professor of Medicine. His activities there were largely in the fields of teaching and clinical investigation. He was a well-grounded and competent internist and a stimulating teacher. In research, his field of special interest was the thyroid. He founded and developed in the University Hospital an excellent thyroid clinic, modeled somewhat after ours here, with which he was familiar. Closely associated with the great school of nuclear physicists at Berkeley, he was a pioneer in the use of radioactive iodine in the study of thyroid physiology and pathology, and in the care of patients. A distinguished bibliography records the results of his studies.

At Iowa, he was but getting started in the solution of many and tough academic problems with which he was well qualified to deal, but fate decreed that he should succumb. A host of friends mourn his going.

It is to be hoped that the lesson may be learned from his sacrifice that our leaders need consideration, as well as do the problems with which they struggle.

J. H. M.

* * *

At the annual meeting of the American Electroencephalographic Society, held at Atlantic City in June, Dr. Mary A. B. Brazier, Research Fellow in Psychiatry at M.G.H., was re-elected Treasurer, and Dr. Robert S. Schwab, Associate Neurologist on our Staff, was re-elected Secretary of the Society.

Dr. John W. Cass, Jr. (*WM* 1931), Assistant Physician on our Staff, and Dr. Herbert H. Howard (*WS* 1914) have been named as two of a five-man executive board for Boston's Long Island Hospital.

The Board of Trustees, at their meetings on June 24 and July 22, voted to appoint:

Dr. Lawrence J. Barrows as Assistant Resident in Neurology, beginning July 1, 1950;

Dr. Albert Cohen as Assistant to the Children's Medical Service;

Dr. Walter S. Kerr, Jr. as Assistant in Urology, beginning September 1;

Dr. Janet W. McArthur as Assistant to the Children's Medical Service;

Dr. Vernon H. Mark as Second Assistant Resident on the Neurosurgical Service, to begin July 1;

Dr. Benjamin F. Miller as Associate Physician to the Children's Medical Service;

Dr. Thomas W. Moran as Second Assistant Resident in Pathology for one year, beginning July 1;

Dr. Bertram Selverstone as Assistant in Neurosurgery, beginning July 1;

Dr. Iwao Uyeda as Intern on the Children's Medical Service, beginning June 15;

Dr. Louis Weinstein as Assistant Physician to the Children's Medical Service.

In addition to appointments already reported, the Trustees, at earlier meetings, voted to appoint:

Dr. Robert A. Fishman as Assistant Resident in Neurology for a period of six months, beginning July 1, and further to appoint him as Resident in Neurology for six months, beginning January 1, 1950;

Dr. John E. LeDonne as Third Assistant Resident in Dermatology, beginning July 1;

Dr. Donald W. S. Stiff as Resident in Radiology for one year, beginning July 1.

At their meetings on June 15, 22 and 27, and July 13, the General Executive Committee voted:

To accept the resignation of Dr. Eda A. Polcari as Clinical Assistant in Medicine;

To extend the appointment of Dr. Richard G. Nilges as Assistant Resident in Neurosurgery from July 1 to September 30.

To promote:

Dr. Roy V. Buttles to the position of Resident in Pathology, beginning July 1;

Dr. Dorr F. Hallenbeck, Jr. from Assistant Resident to Resident in Psychiatry for six months, beginning July 1;

Dr. William J. James from Assistant Resident to Resident on the Neurosurgical Service from July 1 through December 31;

Dr. Joseph Leighton from First Assistan Resident to Resident in Pathology, beginning July 1;

Dr. Hugh A. MacMillan from Second Assistant Resident to First Assistant Resident in Pathology, beginning July 1;

Dr. Winfield S. Morgan, III, from Second Assistant Resident to First Assistant Resident in Pathology, beginning July 1.

To appoint:

Dr. Sadegh Amini as Clinical Fellow in Dermatology for one year, beginning July 1;

Dr. Thornton Brown as Clinical and Research Fellow in Orthopedic Surgery, beginning October 1;

Dr. John D. Crawford as Clinical and Research Fellow on the Children's Medical Service for one year, beginning August 1;

Dr. Elmer F. Franseen as Clinical Assistant in Orthopedic Surgery for one year, beginning August 1;

Dr. Kenneth Fremont-Smith as Research Fellow in Anesthesia for one year, beginning July 1;

Dr. Emile Gautier as Clinical and Research Fellow on the Children's Medical Service for one year, beginning September 15;

Dr. Robert D. Griesemer as Clinical Fellow in Dermatology, beginning July 1;

Dr. Dora Chao Hsi-Chih as Clinical and Research Fellow on the Children's Medical Service for one year, beginning July 1;

Dr. Julio F. Morató-Manaro as Clinical and Research Fellow on the Children's Medical Service for one year, beginning September 1;

Dr. Charles H. Read, Jr. as Clinical and Research Fellow on the Children's Medical Service for one year, beginning September 1;

Dr. William E. Reynolds as Research Fellow in Medicine for one year;

Dr. Donald O. Rudin as Research Fellow in Anesthesia for one year, beginning July 1;

Dr. Edwin A. Smith as Clinical Fellow in Dermatology for one year, beginning July 1;

Dr. Ramon Suarez, Jr. as Clinical Fellow in Medicine for one year, beginning July 15;

Dr. Isaac M. Taylor as Clinical Fellow in Medicine, to visit in the Medical Out-Patient Department during the summer months;

Dr. William H. Timberlake as Clinical Fellow in Neurology for one year, beginning July 1;

Dr. Isabelle Valadian as Clinical and Research Fellow on the Children's Medical Service for one year, beginning September 1.

The following promotions in the Surgical Resident Staff became effective July 1:

Dr. Glenn E. Behringer to Second Assistant Resident;

Dr. James M. Davis, Jr. to Second Assistant Resident;

Dr. W. Sterling Edwards to Second Assistant Resident;

Dr. Sheridan S. Evans to First Assistant Resident, to begin August 1;
Dr. Hermes C. Grillo to Second Assistant Resident;
Dr. Robert S. Shaw to Second Assistant Resident;
Dr. William D. Shorey to First Assistant Resident;
Dr. Blair van H. Thatcher to First Assistant Resident;
Dr. Earle W. Wilkins, Jr. to First Assistant Resident.

Commencement exercises were held in the Samuel Eliot Memorial Chapel on May 11 for the graduating class of the McLean Hospital School of Nursing. The Invocation was given by Rt. Rev. Robert P. Barry. Mrs. Robert Homans announced the members of the graduating class. The ceremonies included an address by Dr. George MacEchnie, Dean of Sargent College, Boston University; songs by the Glee Club, directed by Homer Whitford; and presentation of the Wetherill Award by Dr. Wood to Mr. John Wentworth and Mr. Robert Belyea. The award is given to the two students who have most consistently shown a spirit of thoughtfulness for others throughout their course of study, or have most noticeably developed this characteristic while in the school.

The Class of 1949 has presented a most useful and lasting gift of a sundial to the hospital, and also a donation of money to the Annabella McCrae Scholarship Fund.

A topectomy was performed recently at this hospital by Dr. Lawrence Pool of New York, assisted by Dr. H. Thomas Ballantine, Jr. of the Massachusetts General staff. The operation consists of resection of cortical tissue from the frontal lobes of the brain, for treatment of mental illness.

The total number of admissions of patients during the year was 305. There were 326 patients discharged — only 16% of them not improved. New treatments and therapy have shortened the average period of hospitalization, thus increasing the rate of admissions, also reflecting a decrease in chronic types of illness.

Recently opened at the McLean Hospital are a Beauty Salon and a Coffee Shop, for both patients and employees. The Coffee Shop serves light lunches, as well as sodas and sundaes.

One of the most inspiring events of the year was the dedication of a very beautiful stained glass window in the Samuel Eliot Memorial Chapel on November 28. This window was made possible by the generous gifts of patients, relatives, and friends of the hospital.

MASSACHUSETTS EYE & EAR INFIRMARY

The Committee on Ophthalmology of the National Research Council has chosen Dr. David G. Cogan, Director of the Howe Laboratory of Ophthalmology and Associate Professor of Ophthalmology at Harvard, and Dr. S. Forrest Martin, Assistant Surgeon at the Eye and Ear Infirmary, to conduct a survey of individuals who were exposed to the atomic bomb explosions at Nagasaki and Hiroshima. The project is to last three months, beginning September 3, when Dr. Cogan and Dr. Martin will fly to Japan.

To quote from a letter from the National Research Council:

"Additional impetus has been given to this study in recent months because of the finding of cataracts in a number of individuals who were and are working with cyclotrons and other radiant energy producing processes. . . .

"The background of the Atomic Bomb Casualty Commission briefly is as follows: In November 1946, the President of the United States, at the request of the Secretary of the Navy, directed the National Academy of Sciences – National Research Council to conduct long-term investigations of the medical and biological effects of the atomic bombings in Japan. The Council established the Committee on Atomic Casualties, of which Dr. Thomas M. Rivers of Rockefeller Hospital is the chairman, and the Committee in turn took over the Atomic Bomb Casualty Commission in Japan, which consisted of several individuals who were already working in Kure and Hiroshima. The Commission felt its way along cautiously during 1947, and it was not until 1948 that the operations and facilities began to expand rapidly. Studies are now being conducted in the three cities, Hiroshima, Nagasaki, and Kure (the latter being a control city), the studies in Nagasaki being fairly restricted at the present time. . . . The Commission works in cooperation with the Japanese National Institute of Health and operates as an agency accredited to the Supreme Commander for the Allied Powers, although in actuality it is not a part of the Occupation Forces.

"In general, it is the plan of the Commission to examine as carefully as possible, by both clinical examinations and laboratory examinations, individuals and their offspring of both exposed and control populations."

Dr. Cogan and Dr. Martin expect to return during the early part of December.

Dr. Parker Heath, Director of the Eye Pathology Laboratory, was elected President of the American Ophthalmological Society at its meeting in June.

Dr. Henry F. Allen completed his residency in Ophthalmology on July 31. He will open an office at 200 Beacon Street.

On September 30, Dr. Albert K. T. Ho completes his residency in Oto-Laryngology and will return to his home in Honolulu, T.H., where he will set up his practice.

Recent appointments are Dr. Robert J. Brockhurst, who began his residency in Ophthalmology on July 1, and Dr. Nathan Nachlas, who began his residency in Oto-Laryngology on September 1.

Dr. J. H. Tom Rambo (*Oto-Lar.* 1948) has been appointed to the Staff of the Endaural Hospital in New York City. This hospital is affiliated with the Julius Lempert Research Foundation, Inc.

Contracts for the building and reconstruction at the Infirmary have been let to the Sawyer Construction Company. The work began in August.

The Infirmary has had several visitors from other lands during the last few months:

Dr. H. C. Sun of the Chuloo Medical School, Tsinan, Shantung, China, visited the Infirmary on June 23.

Dr. G. Bietti of Pavia, Italy, visited us on July 8. On July 21, Dr. Bietti gave a lecture on "The present state of chemotherapy in eye tuberculosis", to which the members of the Ophthalmic Staff were invited.

Dr. H. G. Enzenberg, from Sydney, Australia, came to the Infirmary from the Lempert Research Foundation, Inc., where he met Dr. Tom Rambo, who advised him to visit the Infirmary. Dr. Enzenberg was interested in the fenestration operation.

Dr. Felix E. Logans, from Bogota, Colombia, observed at the Infirmary for a week in July.

Dr. Octavio Machado, from the Azores, will be observing in the Infirmary clinics from July until November 1. He also attended the Lancaster Lectures in Portland, Maine.

Operative techniques were observed by Dr. Simons of Indiana on July 28.

In the interest of expediting the get-acquainted period, we have decided to publish short biographical sketches of the new members of the House Staff. It seems to us that valuable associations—

both social and professional — may be started much more quickly as a result of the data disclosed. Therefore, we are planning to publish as many such sketches as possible each month until the entire new section of the House Staff has been covered.

Since the biographies will be brief, we have coined a new word for them. From now on, they will appear under the heading

BIOGLETS

Dr. Clyde Owens Brindley, Intern in Medicine — home address, Temple, Texas; A.B., University of Texas, 1938; M.D., Duke Medical School, 1943; Intern, Duke Hospital, 1943-44; U. S. Army, January 1944-December 1946: 3rd Army Artillery in Belgium, 85th Engineer Battalion in France and Germany, and 42nd Infantry Division in Germany and Austria; biochemical research, Johns Hopkins, 1947, and at M.I.T., 1948-49.

Dr. Ernest Stanley Crawford, Third Assistant Resident in Surgery — born in Evergreen, Alabama, May 12, 1922; A.B., University of Alabama, 1943; two years, University of Alabama Medical School; two years, Harvard Medical School; M.D., 1946; Intern, general surgery, M.G.H., 1946-47; U. S. Navy, July 1947-July 1949: General Surgical Service, Portsmouth Naval Hospital, Portsmouth, N. H.; married July 3, 1949.

Dr. George Albert Culver, Assistant Resident in Anesthesia — born in Lampasas, Texas, 1922; B.A., University of Texas, 1942; M.D., University of Texas Medical School, 1945; Intern, Gorgas Hospital, Ancon, Canal Zone, 1945-46; U. S. Army, 1946-48: Brooke General Hospital, Fort Sam Houston, Texas; Fellowship in Physiology and Pathology, University of Rochester School of Medicine and Dentistry, Rochester, N. Y., 1948-49.

Dr. Robert Allen Fishman, Assistant Resident in Neurology — born in New York City; home, Forest Hills, Long Island; U. S. Navy, 1943: Newport, R. I.; A.B., Columbia University, 1944; M.D., University of Pennsylvania, 1947; House Staff, Medicine, New Haven Hospital, 1947-49.

Dr. Adolf Loftsgaard Gundersen, Intern in Surgery — born in La Crosse, Wisconsin, October 25, 1925; Harvard University, June 1943-June 1945; M.D., Harvard Medical School, June 1949; married June 1948.

Dr. John Edward LeDonne, Third Assistant Resident in Dermatology — born in Boston, Mass.; B.S., Tufts College, 1943; M.D., Tufts College Medical School, March 1946; Intern, Internal Medicine, Boston City Hospital, April 1, 1946-June 30, 1947; upon completion of internship, U. S. Naval Reserve Medical Corps: Chelsea, Mass., Bethesda, Md., Marine Barracks, Quantico, Va., and fifteen months as Senior Medical Officer aboard the light cruiser *U.S.S. Spokane,* visiting many ports in the Mediterranean area.

Dr. Kenneth Powell Nash. Assistant Resident in Psychiatry — born in Glendale, California, July 9, 1915; A.B. in Bacteriology and pre-medicine, University of California, 1939; M.D., University of Maryland, 1943; Intern, Huntington Memorial Hospital, Pasadena, California; U. S. Army, January 1944-January 1947: Fort Ord, California, Mason General Hospital, New York, Camp Barkeley, Texas, Baxter General Hospital, Spokane, Wash., Surgeon General's Office, Washington, D. C., Chief of Psychiatry, McCornack General Hospital, Pasadena, California; Resident in Neuropsychiatry, V.A. Brentwood Hospital, Los Angeles, 1947-January 1949; member of the Staff, January-July 1949.

Dr. Frederick William O'Brien, Jr., First Assistant Resident in Radiology — born in Brookline, Mass., April 16, 1923; moved to Boston at the age of two; A.B., Holy Cross, February 1943; M.D., Tufts College Medical School, 1946; Medicine, Boston City Hospital, for fifteen months; U. S. Navy: two years in Radiology at U. S. Naval Hospital, Great Lakes, Illinois, where the Chief of Service was Capt. John P. Wood, who was Graduate Assistant in the MGH X-ray Department under Dr. Holmes; married; one child — Frederick W., III.

Dr. David Stafford-Clark, Assistant Resident in Psychiatry — born in Bromley, Kent, England, March 17, 1916; graduated, London University and Guy's Hospital, January 1939; House Surgeon and House Physician, Guy's; House Surgeon, Emergency Medical Service, September 1939; Flying Officer and Squadron Leader (Medical), Royal Air Force, December 1939-December 1945: service in England, France, Belgium, Holland, and on air-borne operations, medical parachutist, 1944; veteran postgraduate training: Resident, Internal Medicine, Guy's, 1946; Psychiatry, Maudsley Hospital, London, 1946-48; Neurology, National Hospital, Queen Square, London, 1948; Nuffield Traveling Fellowship, visiting France, Spain, Portugal, Belgium, Switzerland, Austria, Germany, Czechoslovakia, Hungary, and the United States, 1949; married 1941; four children.

We enjoyed a bit of good-natured give-and-take with Dr. Fishman the other day. "What is that very modern building over there?" he asked, pointing out through the window to the Bulfinch. And that was the start off. You see, Dr. Fishman has come from one of the two general hospitals in the country which antedate M.G.H.

When another Gundersen came to M.G.H. in July, we became aware of what we believe to be a unique record for any one family in the United States. Both of Dr. Adolf Gundersen's grandfathers were doctors. Of his father's generation, numbering 7 boys and 1 girl, all the boys except one became doctors, and the girl married a physician. Of his own generation, his brother Sigurd is now an Assistant Resident in Surgery here at M.G.H., and his sister has married a Norwegian doctor. Some of his uncles and cousins, which he counts by the dozens, are alumni of M.G.H., and one uncle, Dr. Trygve Gundersen, is a Surgeon in Ophthalmology on the Massachusetts Eye and Ear Infirmary staff.

But back to the question as to whether this record can be topped by any other family in the country — we really would be interested to know. There are several family names which appear many times in our MGH records and which might win out in the number of *generations* represented in the medical profession. However, as to the number of *individuals* in any one family who have become physicians, we wonder if this Gundersen record can be bettered. Whether it is or not, we can well understand why Dr. Adolf's grandmother was once given the title of "Matriarch of the Aesculapians" by a New York newspaper writer.

The Fiftieth Anniversary Meeting of the International Council of Nurses was held in Stockholm, Sweden, June 12-16, and was attended by 3,600 nurses from 41 countries — 600 of whom came from America. Miss Sleeper, who is Chairman of the Education Committee, flew over in time to attend the meeting of the Grand Council which preceded the general meetings. She has been elected to serve as Chairman of the Committee for the next four years.

The nurses of Stockholm County, prior to the convention, earned $10,000 by a two-hour sale of cakes, cookies, and coffee, to provide unforgettable hospitality. Butter, sugar, and coffee were donated by the nurses, who voluntarily went without their rations. Some of the proceeds of the sale were used to bring fifty nurses from war-torn countries to Stockholm for the meetings.

Discussions centered largely round the topic of providing adequate nursing for the various communities. Problems appeared to be similar in many countries.

The Misses Tarbox, Crotty, and Lepper, who attended the conference, made short tours through England, Scotland, and the three Scandinavian countries. Miss Lepper was entertained in Denmark and England by several nurses of those countries who have visited M.G.H. during the last two years.

Miss Anna Griffin, for eleven years Assistant in charge of the Nursing Service at the Baker Memorial, was given a party by the Nursing Service on Monday night, July 25, in honor of her retirement on August 15. The affection with which Miss Griffin is regarded by her staff and co-workers was expressed by many useful household gifts. On Sunday, August 7, a tea was given for Miss Griffin by members of the private duty group. Miss Griffin has established a home at 49 Fairmont Avenue, Wakefield.

Miss Dorothy Perkins, a graduate of the Johns Hopkins Hospital School of Nursing, and of Teachers College, Columbia University, formerly the supervisor of the Marburg Building for Private Patients at Johns Hopkins, has succeeded Miss Griffin.

Miss Margaret M. Mawn, a graduate of Simmons College School of Nursing, has been appointed to the position of Assistant Instructor in Nursing.

In preparation for the poliomyelitis season, the Misses Ruth Hanson, head nurse on White 12, and Florence Sojka, head nurse on Baker 4, were released from their duties to take a short course in the nursing of poliomyelitis patients at Children's Hospital. These head nurses have returned and are teaching members of the nursing staff some of the techniques they learned.

The position of Counselor in the School of Nursing, left vacant by the resignation of Miss Dorothy Dissell, who has embarked upon studies for a Ph.D., has been filled by the appointment of Miss Fairlie McLaughlin, A.B., who prepared at Smith and Radcliffe Colleges.

Miss Norma Larson, supervisor of

Public Health Nursing, resigned on August 31, to begin work on a Master's degree at Harvard School of Public Health.

On Saturday, August 27, Miss Joan Allen, head nurse on Bulfinch 3, became the bride of Mr. Henry Curren Reardon. Mrs. Reardon will continue as head nurse on Bulfinch 3.

New addresses:—

- Dr. John F. Bresnahan (*Asst. Res. Phys.* 1914-18), Veterans Hospital, Fayetteville, Ark.
- Dr. Richard S. Eustis (*WM* 1912 & *CM* 1913), Chesham, N. H.
- Dr. Norman P. Johnson (*EM* 1925), 65 South 10th St., Minneapolis 3, Minn.
- Dr. Merrill J. King (*s. Oph.*), 1180 Beacon St., Brookline 46, Mass.
- Dr. Vernon P. Thompson (*Or.* 1925), 1136 West Sixth St., Los Angeles 14, Cal.
- Dr. Milton V. Veldee (*EM* 1920), Hyland Laboratories, 4534 Sunset Blvd., Los Angeles 27, Cal.

Brief bits:—

- Dr. Edwin F. Alston (*P* 1944) began his residency in Psychiatry at the Veterans Administration Hospital, in Palo Alto, California, on July 1.
- Dr. Henry K. Beecher (*WS* 1934), Chief of our Anesthesia Service, will address the Pennsylvania State Society of Anesthesiologists, at Pittsburgh, on September 29. His subject will be "Acidosis and anesthesia".
- Dr. Edward B. Benedict (*WS* 1926), Endoscopist at M.G.H., delivered a lecture on "Differential diagnosis of benign and malignant lesions of the stomach by means of the flexible operating gastroscope", at the meeting of the American Gastroenterological Association in Atlantic City, on June 3. On June 6, he spoke on "The value of gastric biopsy as obtained through the flexible operating gastroscope", before the American Medical Association. In addition, he discussed the following papers given by others at the June meetings: "The role of Gastroscopy in the diagnosis of upper gastrointestinal hemorrhage of obscure origin"; "The use of a flexible tube in the diagnosis and treatment of disorders of the esophagus"; "Gastroscopy as an adjunct to photofluorography in the early diagnosis of gastric malignancy"; "The role of the esophagus in local and systemic disease".
- Dr. Edwin M. Cole (*r.p. N* 1932 & *r.p. Psychi.* 1934), Associate Neurologist at M.G.H., will attend the Fourth International Neurological Congress, in Paris, September 5-10. Dr. Cole will also visit several neurological clinics in France and England.
- Dr. Oliver Cope (*WS* 1930), Visiting Surgeon on our Staff, reports the following newcomers in his department: in the laboratory, Miss Mary Schofield and Miss Laila Chartuni; in the office, Miss Wilma Howe has succeeded Miss Page as Dr. Cope's secretary.
- Dr. Chester N. Frazier, Chief of our Dermatology Service, informs us of two notable visitors in his department recently — Dr. Leopold Arzt, Professor of Dermatology at the University of Vienna; and Dr. Nowshir Kaikobad Jungalwalla, Deputy Public Health Commissioner, New Delhi, India, a Rockefeller Foundation fellow interested in the control of venereal diseases.
- Dr. Carl W. Gottschalk (*M* 1946) is out of the Army. Until June 30, 1950, he will be a teaching fellow in the Department of Physiology at Harvard Medical School.
- Dr. William McK. Jefferies, who finished as Clinical and Research Fellow in Medicine at M.G.H. on June 30, has become Instructor in Medicine at the Western Reserve Medical School, Lakeside Hospital, Cleveland, Ohio.
- Dr. Duane H. Mitchel (*M* 1943) is practising Internal Medicine at the Arneill Clinic in Denver, Colorado. He says he is enjoying the association there with two other MGH-ers: Dr. Ira Dixson (*WS* 1930) and Dr. Hugh A. MacMillan, Jr. (*a.r.s.* 1947).
- Miss Lucy G. Morse, past Head of our Occupational Therapy Department, leaves for England in early September, to be gone for a year. She will teach in the Liverpool School of Occupational Therapy, and act as Assistant to the Director. The address of the school is Victoria Road, Huyton, Liverpool, Eng.
- Dr. Adney K. Sutphin (*WM* 1943) visited M.G.H. in August on his way through to Maine where he and his family vacation. He had a good deal to say about his new little daughter — 7-months-old Ann Candler Sutphin.
- Via the grapevine, we have learned that Dr. Milton S. Thompson, Jr. (*Or.* 1934), Chief of the Orthopedic Service at Brooke General Hospital, Fort Sam Houston, Texas, has been made a full Colonel in the regular Army.

In our report on the history and work of the Warren Library, published in our July-August issue, we gave credit for the invention of the book wagon to Dr. Washburn. He sent us a correction, which we hasten to make. It was Dr. Joseph B. Howland, Assistant Director under Dr. Washburn's administration, who was responsible for the invention.

In reply to a note from us, Dr. Howland gives additional information on the subject. He writes:

> It is true that I designed the first book cart in use at the M.G.H. It came about in this way — Miss Wiggin, the Librarian, was not well, suffered from arthritis, and it bothered me to see her plodding about with her arms full of books. I thought a light cart would help her, and so it proved. Thus the cart. It was widely copied, so apparently it met a general need.

A "first" letter is always a special treat, therefore we were delighted to hear from Dr. Edward B. Dewey (*ES* 1921).

> I am practising Surgery and Gynecology in Pasadena, California—just finishing twenty years in this location. I am married and have three boys — ages twenty, seventeen, and thirteen.
>
> All my surgery is done at the Huntington Memorial Hospital in Pasadena. My office is now in a somewhat disturbed state, for I am getting ready to move to the Thatcher Medical Center, 960 East Green Street, Pasadena. This is a very modern and beautiful building, some pictures of which have, I believe, appeared in *Life Magazine*. The complete air-conditioning will be welcome in the summertime. If any of you come out this way, please pay us a visit.
>
> For the benefit of the men in Boston and elsewhere, I take great pleasure in calling their attention to the fact that Dr. George Thorn was the spark plug of the annual convention of the California Medical Association in San Francisco in 1948, and in 1949 Dr. Chester Jones also did a wonderful job at our state convention in Los Angeles. I hope this will be a habit — to bring some Boston ability here every year.

Dr. Francis F. Foldes (*r.p. An.* 1943), Assistant Anesthetist on our Staff from 1944 to 1947, when he resigned to go to Pittsburgh, has sent us this interesting account of his activities down there.

> I have been in Pittsburgh for two years and find it a delightful city.
>
> I was appointed Director of Anesthesia at Mercy Hospital — a 730-bed hospital, with most of the beds used for surgical cases. The surgery practised here is greatly varied, and of very high caliber. Among others, we have a large chest surgical and neurosurgical service. The hospital also has a very active obstetrical service.
>
> When I took over, I was allowed free hand in reorganizing the department. I have been most generously assisted in my efforts by both the management of the hospital and the medical staff. My requests for new equipment were fulfilled, and the hospital equipped a small research laboratory for the department.
>
> The Department of Anesthesia has a teaching program for both doctors and nurses who wish to specialize in anesthesia. The department offers six two-year residencies for doctors, and a one-year course for nurse anesthetists.
>
> In the first year we had to get along with only one resident and several nurse anesthetists. This year, however, we have four resident anesthetists, five trained nurse anesthetists, and eight student anesthetists in the department. We administer between eleven and twelve thousand anesthesias yearly, take care of the preoperative medication, and are frequently consulted with regard to the postoperative care of our patients. We also do a considerable number of therapeutic and diagnostic nerve blocks.
>
> My relationship with the other anesthetists in town has been most friendly from the very first day. We try to cooperate with one another in every respect. For example, we now have a resident training program in which all the anesthesia departments in the city participate. The Pittsburgh Society of Anesthesiologists is also very active.
>
> Our research laboratory has been functioning since June 1948. I am trying to continue the investigation of lipid metabolism in various physiological states and pathological conditions. We are also doing some work on the prolongation of the action of subcutaneously injected drugs, and I am still interested in preoperative digitalization of patients with decreased cardiac reserve.
>
> Besides working in the hospital, I have been giving lectures in Anesthesia to fourth year medical students at the Pittsburgh University Medical School. Last year I was appointed Instructor in Surgery (anesthesia) at the Medical School, and this year I have been promoted to Assistant Professor. I also hold an appointment as Consultant in Anesthesia at the Deshon Veterans Hospital and the Mayview State Hospital.
>
> Last year I spent four weeks in Europe, most of it in my native city of Budapest. I flew both ways, and on my way out I spent a few days in London. In Budapest I took part in an International Medical Congress, where I gave four lectures on Anesthesia. The rest of my time was divided between visiting old friends and demonstrating modern anesthesia methods at the Budapest hospitals.

Dr. Means received this interesting letter from Dr. John G. Freymann (*M* 1947), written while he was in Berlin last June.

> I seem to be making a habit of writing from more or less beseiged cities, although I must admit that I did not get to Berlin until the blockade was officially terminated.
>
> Since my last letter from Jerusalem, I have traveled more, learned much, seen a lot, but have stayed pretty much on the periphery so far as medicine is concerned. During November and December I had a free-lance assignment to inspect the Arab refugee camps and do whatever I could for their relief. I wandered through Lebanon, Syria, Trans-Jordan, and Arab-occupied Palestine, seeing a half-million of the estimated 750,000 persons who had been driven from their homes by the Zionists. Their situation then, in December,

Frederic Augustus Washburn, M.D.
1869-1949

was desperate. Now it is probably worse, although one can only guess, since there is seldom more than passing mention in the press of this pitiful aspect of the Palestine problem. At any rate, when I saw them they were living in the open, under tents, in doorways, in warehouses, in mosques. They crowded the streets of villages — some begging, some just sitting. The weak Arab governments provided a modicum of aid (200 grams of flour a day for the more fortunate), but never enough to keep them more than barely alive.

When dealing with such primitive populations one has to change one's clinical frame of reference. When I first saw thousands of people living without adequate shelter, without latrines, without food, with inadequate, contaminated water supplies, and, of course, without any immunizations, I visualized a typhoid and/or cholera epidemic which would kill them off like flies.

Of course, they did die. The death rate was high, even as recorded, and no one knows how many were buried by their own families without report. But there never was a true epidemic. There was much talk of "animal resistance" and acquired immunity, but in my opinion the fact that typhoid — and certainly cholera — did not sweep the camps is miraculous. I think that exposure and malnutrition outbalanced the toughness of those Arabs who were strong enough to reach adulthood. But, on the other hand, I am sure that 90% of Americans living under such conditions would have died before the winter was out.

The medical supplies were pitifully inadequate. I helped Arab doctors who could reach a given camp only once every week or two weeks. The refugees formed in long lines and filed through our tent. The only supplies we had were quinine and paregoric. If the complaint was chills and the patient had a spleen: a handful of quinine tablets for the adult; an i.m. injection for the children and infants. If it was dysentery: a dash of paregoric was poured into their cup. That was all.

It is obvious that I couldn't contribute anything to relief. I wrote a report to the State Department and the Public Health Service which I am sure no one has ever read. And then I came back to Paris.

If I sound bitter and frustrated, believe me, I was — and still am.

As an antidote to the Near East, I went to Vienna for a six-weeks' course in Medicine at the Algemeines Krankenhaus. It was my first contact with real clinical medicine in over a year and I thoroughly enjoyed it, short though it was. The staff was still discussing the gems dropped by Drs. Jones and Cope the year before. The medical men impressed me as an intelligent and able group who were working hard to make up for the vacuum left by the war. Professor Chiari was a particularly outstanding example.

The hospital itself made me downright nostalgic. It was built in the same era as the Bulfinch, and the interior of the wards had the same half-antique, half-modern atmosphere. It was terribly crowded, though. The most striking difference: the nurses. Very few were young (this is strictly a professional observation), and they had the social status of menials.

The Vienna course was too short and I went back to the examination of DP's. More misery, but the care of these poor people is now in the efficient hands of the IRO, and they are being funneled out of Europe and into new homes at a most gratifying rate.

That is what I am doing in Berlin: filtering out the tuberculars and the mentally unfit. Not very interesting, but something which has to be done. It will be all over for me on the 11th of July, though, and I start home to real medicine again. My fellowship at the Mayo Clinic starts October 1.

I met Arvil J. Hinshaw (*ES* 1947) ministering to a destroyer squadron in Haifa harbor, and Cecil F. Baxter (*WS* 1944) who was Chief of Surgery at the 110th Station Hospital in Vienna.

Abstract: Proceedings Society Miscellaneous Research, 1st Edition

Stewart, James M. and Stewart, Natalie B., with the technical assistance of MacNaughton Wilkinson gratefully acknowledged.

The authors wish to report at this time that in the past nine months they have successfully synthesized an entirely new product, which will be named Nancy Byrd Stewart after the authors. While the authors lay no claim as to originality in the methods involved in its production, they do claim their results to be unique. The product is relatively small, weighing only 6 lb. 14 oz., has brown eyes and dark hair, and for the most convenient handling should be partially packaged in white absorbent cotton gauze. The authors are not yet prepared to state in full the value of their new product, but early experience indicates it to be of great potential usefulness in overcoming the food surpluses predicted by the Department of Agriculture for 1949. Its phonetic properties show promise as a substitute for benzedrine in the treatment of narcolepsy. However, difficulties have arisen in its regulation which may limit its usefulness as an alarm clock. Future reports will be made as more experience with this priceless product is secured.

Rochester, N. Y., July 26, 1949

We have given you a transcription of the communication from Dr. James M. Stewart (*M* 1946) just as it came to us, with no introductory comment on our part, hoping that you might be as confused as we were when we started to read it and that you might enjoy as hearty a laugh as we did when the meaning of the "abstract" began to dawn upon us. Dr. Stewart certainly deserves an A plus for originality!

Following the above announcement, the letter continues:

After my discharge from the Army in May 1948, I returned to my home city of Rochester for a year's fellowship in Pathology and Physiology at Strong Memorial Hospital. At present, I have just started my assistant residency at Strong.

During the past year I have seen many old Boston friends. Wade Volwiler stopped by on his way to Minnesota to see the animal research facilities at Strong. Jack Graettinger, Harvard '45, spent the night with us on his way to Chicago. The high point of reunioning was the meeting of the Society for Clinical Investigation at Atlantic City in May, where it seemed as if half of our 1945 Harvard class convened.

May I add my congratulations to many others on the continued excellence of The News. Its arrival is always welcomed and its contents eagerly read and enjoyed.

THE NEWS

No. 83 Boston, Mass. October 1949

NATHANIEL WALES FAXON, M.D.

One hundred years of Faxon history with all births boys—not a single girl in the family. Can there be any question as to the masculine qualities of the particular representative of this family who is under consideration?—especially as all his children are also boys. Nor can there be doubt that in his case these qualities are of a nature which makes for masculine friends. If you sit in his office you will note how many who enter greet him as "Nat", though not failing in the respect he so well deserves.

As his predecessor in the position of Director at the Massachusetts General Hospital, I was just back from World War I when into my office there came one day a young man I recognized as Dr. Faxon. He, also, had returned from the war and had resumed his successful practice with his father in Stoughton. After an exchange of stories of war experience, I was surprised and pleased to learn that Dr. Faxon had come to apply for the position of Assistant Director, with the expressed desire to prepare himself at Massachusetts General for a career in hospital administration.

I was well aware that his hospital training in the South Surgical Service at M.G.H., his country practice with his father, and his military training—good though brief, had given him an excellent foundation of experience for an appointment as Assistant Director where he could obtain the actual training needed for hospital administration. There was such a vacancy at the hospital, I knew the man's sterling qualities, and it did not take long for Nat Faxon to become an Assistant Director. Here he had the opportunity to head, in turn, the different branches of the House and Out-Patient Departments, and as he gradually advanced in rank and his seniors went to other hospitals as Directors, he substituted for me when I was on vacation or attending conventions. Then came the invitation to head the important teaching hospital, the Strong Memorial, in Rochester, New York.

I was vacationing on Cape Cod at the time, and down he came to consult me about its acceptance. I remember so well our long talk together at that time. He was disinclined to take such a position until he had gained more experience. However, I advised him to accept in the words of Shakespeare: "There is a tide in the affairs of men, which taken at the flood, leads on to fortune."

Persuaded largely by my advice, I like to think, he did accept and had a most successful career of good building construction, the organization of the hospital personnel, and the handling of all the many jobs which fall to a hospital administrator.

After my retirement at the age limit as Director of M.G.H. and the short administration of my successor, Dr. Faxon was called back from Strong Memorial to become Director here. That was in 1935, and he has held the position until now, when he, too, has reached the stipulated retirement age.

He has carried the hospital, with its many difficult problems, through the most trying financial crisis in its entire history. Others, more closely connected with his administration during these hard times, will tell you about them.

Good luck, Nat, with some congenial task for the advancing years. Not all fishing, you know.

F. A. W.

(The above is a transcription of Dr. Washburn's final manuscript, written only a very few days before his death. *Editor*)

THE DIRECTOR

The daily problems of a busy institution will frustrate the best of men from time to time and produce a sense of inadequacy. It has been rare to see Dr. Faxon yield to this pressure, but not long ago the inevitable happened. Some tangle of hospital details seemed impossible to unravel. I took the occasion to tell him that in my opinion his greatest strength as an administrator lay in permitting what might be called a wholesome degree of confusion. Greatness in the Director of the M.G.H. lies in this particular quality rather than in the more usual liking of an administrator for rigid and disciplinary regulations. His has been an administration by influence and example—not by authority and sanction. For a hospital is a human organization and its course must be set by men of good will who are patient in dealing with human frailties.

A similar thought was expressed far more gracefully by the President of the University of California, writing in 1909 to congratulate the new President of Harvard. He said that a great institution needs the correction of what he termed "humanistic haze"—a far better phrase than wholesome confusion. "Freedom from haze", continued President Wheeler, is likely to be identified with the "certitude of finality." "Sharp outlines suit the mountains of Arizona, but in the settled lands haze is very becoming to hilltops. Contingent reasoning represents the best logic we humans can expect to use."

Certainly Dr. Faxon has never been hazy himself, but he has kept our hilltop as it should be, enveloped in an atmosphere of changing lights and shadows in which many different people see as many different values, but in which all see its true dignity and grandeur. His reasoning has been contingent on many things: on limited financial resources, on the confines of a city block of land, but most of all on human beings with their demands and needs, their strengths and weaknesses.

Someone has described an institution as the lengthening shadow of a single man. This could never be said of the M.G.H. To those who spend the few years of their lives for and in the M.G.H., it is enough to believe that with the passing of time they may build into their own character some of the qualities that reside in the institution. Like the boy in the valley who in later years came to possess certain features of the rugged granite profile of the Great Stone Face, so Dr. Faxon has grown to reflect the human dignity and nobility of the institution he has served. In his life and work he has loved and served The Hospital; he has now come to be The Hospital.

E. D. C.

DR. NATHANIEL W. FAXON
DIRECTOR, M.G.H., 1935-1949

Dr. Faxon and I came to know each other in the 1920's when he was First Assistant Director of the Hospital and I was Secretary of the Board of Trustees. In 1922 he left to head the Strong Memorial Hospital in Rochester, New York, and we didn't meet again until he returned to become Director of our Hospital in 1935, in which year I was elected a member of the Board of Trustees. Over the ensuing fourteen years and especially during the last three when I have been Chairman of the Board, Dr. Faxon and I have seen much of each other—for my part with ever increasing respect and affection. Many a time during this period I have said, "How does he do it?" This Hospital of nearly one thousand beds (not including the Massachusetts Eye and Ear Infirmary, of which Dr. Faxon was also Director), a professional staff of 416 doctors, 562 nurses, and approximately 1700 employees, to say nothing of 563 volunteer workers and the scores of doctors who come each year from all over the world to the M.G.H. for further education and training—how does he do it and do it so calmly, so effectively, and with such wisdom and forethought? That he has done it and done it in just that way, the expansion during these fourteen years in the three functions of the Hospital—the care of patients, teaching, and research—to say nothing of the remarkable physical growth of the institution, bears eloquent testimony.

Dr. Faxon will say, with his superlative modesty, that it was his assistant directors, the heads of departments, and the staff who bore the brunt of things, but the imprint of his ability and leadership is clearly visible in all that has transpired since 1935. We all marveled at the way he kept things running smoothly while the magnificent White Building was being constructed, literally in the Hospital's lap, and again when the beautiful Vincent Memorial Hospital Building, to house the Vincent Memorial Hospital and the Burnham Memorial Wards for Children, was built. There were also many smaller physical changes made in existing structures during this time, as the need for new laboratories grew because research became of increasing importance.

With the War came the setting up of the Defense Organization within the Hospital, which prepared the way for the successful handling of the Cocoanut Grove Disaster of November 1942. This terrible catastrophe, coming as it did shortly after the staff of the Hospital had been greatly depleted by the activation for field service of the Sixth General Hospital, tested the effectiveness of the organization of the Hospital to its depths. It is indeed a tribute to Dr. Faxon's genius for administration and to the superb morale of our staff that the Hospital was able to give its all to the unfortunate victims of that disaster and still function throughout in its normal way.

During the War forty percent of our staff and one-third of our nurses entered the military service, and yet the regular activities of the Hospital steadily increased. The personnel shortage which then began has continued, and we have reason to be more than thankful to the hundreds of volunteers who then and now do such fine work for our institution. Dr. Faxon's vision and personality had much to do with the development of this great body of unselfish and devoted workers. Despite the handicaps of the war years, the Hospital continued to march forward under the leadership of its depleted but brilliant and doubly hard-working staff with Dr. Faxon at the helm—calm, effective, and resourceful. Again one wonders, "How did he do it?" But he did, and in the doing of it made sure that our teaching and research activities constantly improved and expanded, thus bringing to the sick a higher level of care and cure.

Meanwhile his profession and the community were naturally calling for Dr. Faxon's talents and ability, and therefore we find him, among many other things, serving as President of the American Hospital Association and of the Hospital Council of Greater Boston, and as a member of the Board of Directors of the Blue Cross, as well as making many appearances before our Legislative Committees on matters pertaining to hospitals. His wisdom and experience have been drawn upon in these and numerous other ways. Dr. Faxon has not flinched at the financial problems that have beset the M.G.H. as well as all other hospitals these last few years. If, currently, the sharply increasing demands for free care have presented the Hospital and his successor with a new set of problems, it must have been a great satisfaction to Dr. Faxon in February to end his last full year with the budget practically in balance.

The Massachusetts General Hospital is a great hospital—probably one of the greatest in the world, and certainly one of the most beloved and best known. It has been blessed throughout its existence by devoted Boards of Trustees, a brilliant and unselfish Staff, and by Directors of ability and vision. Perhaps at no time in its history have these three groups functioned together so effectively to improve the care of patients and to expand teaching and research as during the past fourteen years. We have been fortunate indeed to have had as our Director during this period a man of such integrity, singleness of purpose, and sterling character. Dr. Faxon leaves his active post with our lasting gratitude and our warmest affection.

F. C. G.

TO OUR DEAR FRIEND, DR. FAXON

"Once you have found him, never let him go"—and how very much we all wish this might be fulfilled.

Unfortunately, time and tide wait for no man—and the time has arrived when officially we must let one of our dearest friends of many years pass from our business and professional association to that of personal friendship.

Dr. Faxon has had an honorable and wonderful career, much of which has been passed within the walls of our hospital. He must, in his own mind, be leaving with the great satisfaction of a difficult job well done and should realize, also, that he leaves with the admiration and love of all who have been associated with him here, and with the respect and gratitude of the entire community. There is little more that one could desire. When all is done, there are only two things in life that really count—friends and reputation—and no man is more abundantly blessed with both than our dear friend.

We shall sorely miss him—his sage advice—his desire that justice shall be done to all in any decisions—a sportsman in all ways of life—a great humanitarian—a true friend of all.

Good-bye, Director Faxon—God bless you and yours.

J. R. M.

A SALUTE TO N. W. F.

In this number of THE NEWS the M.G.H. pays homage to a beloved and distinguished son. The occasion, however, is not that of the end of a career, but rather its apogee. There is no doubt whatever that our Nat will continue to contribute, as have his predecessors, to the broad field of hospitalogy. In just what manner, one cannot, at the moment, predict. One thing is certain, however, and that is that as long as he draws breath, he will continue to catch stripers and inhale stogies.

The mere mention of stogie invariably brings Nat delightfully to my mind. From a long black twisty weed a curl of smoke envelops that genial smile and describes a proper halo about that shining dome. I'm not sure whether the Pittsburgh or the Wheeling is preferred—any stogie, I fancy, if rank enough.

I am not attempting a biography of Dr. Faxon, but since I have seen him in a broad setting, I will try to catch a likeness quickly by a few strokes of the pen. I have been connected with the M.G.H. for thirty-eight years, and I entered her halls as a medical student two years before that. I have served under three directors, and can perceive, therefore, the different types of contribution which each made to the evolution of the hospital. I can even remember "Herbie" Howard, but he left as I began, to start the Peter Bent Brigham Hospital. Joe Howland, who acted as director during World War I while his chief, the late Colonel Washburn, was commanding the hospital's military metastasis in France, I knew well. Washburn, who was then invariably called "the Major", was in charge while I was an intern. He bawled me out good and plenty on one occasion, for which I did not then love him. However, he must have liked the way I took it, for later he made me his adjutant in Base Hospital No. 6, and from this developed an intimate friendship which was lifelong. He was one of the most loyal backers I ever had. The next director with whom I served was the late George H. Bigelow. Chosen for his medical statesmanship, he was off to a brilliant start when inscrutable fate tore him from us. And so we come to Nat, the third director with whom I have worked personally. All these men have been outstanding. They would not have been chosen to be directors of the M.G.H. had they been otherwise. But their talents have been of different varieties, and Dr. Dean A. Clark who comes next, and of whom we expect much, will bring yet another skill to bear on problems of ever increasing complexity.

I first encountered Nat directly after World War I when he came back to his Alma Mater as Assistant Director, or Assistant Resident Physician as they were called in those days. After an internship on the old South Surgical Service, he had joined his well-known father in general practice in the salubrious shades of Stoughton, Massachusetts. However, a yen to command developed during his tour of duty in the Army and thus early post-first-war days found him taking up his training to become a hospital administrator.

As a young full-time clinician I found Nat a delightful companion. I even lived with him, an August or two, when our wives were at the seashore, in that cozy house, corner of Allen and Blossom. Dammitall, they are going to tear it down! Those were the times of that noble experiment—the great prohibition era, and amazing were the ways which law abiding citizens discovered to procure their tipple. Nat used to make cocktails out of God knows what, that would grow hair on the chest of a brass monkey. These but whetted his appetite for proficiency in his calling. Stogie in mouth, he sat night after night pounding his typewriter. How many fingers? I don't know, but certainly not ten! What was he doing? Copying all the rules and regulations of the M.G.H. in order to inflict them later on the Strong Memorial Hospital to which he had already been invited to go as Director.

The M.G.H. gave Nat his training (the Army perhaps a bit, also). The Strong Memorial gave him his first major workout, and then it was at the M.G.H. again that he came to his full flowering. All our directors have been builders. Washburn built the Walcott House, the Moseley, the Phillips House, and the Baker. Faxon built the Strong Memorial at Rochester, New York, and since returning here he has built the White Building and the Burnham-Vincent. He almost built our new Research Building, and after years of work extracted the promise from the Trustees of a new laundry. I am thoroughly in accord with Nat on this subject of laundries, but for different reasons. He wants a new one for its own sake. I want it in order to get the old laundry out of the Bulfinch! We can use its space more directly in the cause of clinical science.

The directors, however, have built other things than buildings. Nat, for example, has been a great builder of morale. He has had the staff with him from the beginning. His geniality, his candor, his approachability have been endearing and heartening to all. The door of his office stands always open. There is no trouble about seeing Nat about anything. There is, however, often some difficulty in talking with him, not because of any unwillingness on his part, but because, as William Henry Smith called it, that rudest of instruments, the telephone, is forever interrupting. I have found that the best way is to induce him to join you, when weather permits, under the horse chestnut tree, or in some other telephoneless nook when it is inclement.

Nat has always worked very closely with the service chiefs, and thus has been an important factor in giving solidarity to the whole enterprise. Also during his administration there has developed an altogether new relationship between the staff and Trustees. In earlier days these groups were as far apart as the poles. They had nothing whatsoever to do with one another. Now, without in any way by-passing the Director, they are in intimate contact in many areas. Committees, some of them, like the Research Committee, standing committees, are made up of both Trustees and staff members working together. There can be no doubt that this intimacy between doctors and laymen has been constructive. The former are sometimes called to earth from their flights of professional fancy by the hard-headed lay Trustees. The latter gain insight into the hospital's problems by working so closely with the doctors.

The era of Washburn's administration was one of physical growth of the institution and development of the staff organization. The objective was perfection in the M.G.H. as a unit. During the Faxon era, particularly since the close of World War II, the aim has been to include the great problems of the hospital's place in the community, its relation to other units, hospitals, teaching institutions, the State, and the general public. In all this, Dr. Faxon has exercised leadership. His speeches at the Ether Centenary, the Lowell Institute, and on other occasions have set forth his views. A liberal, a progressive, he is yet no radical. Joining with enthusiasm those who protest against the stand-pattism of organized medicine, he nevertheless on election day casts a straight Republican ballot, and that with a good deal of gusto. In other words, Nat is a broad-minded, fair-minded, open-minded middle-of-the-roader, which is probably exactly what the hospital has needed during the times in which he has served. He has held together the firebrands among us, and the reactionaries, in useful cohesion. The institution has been the thing, but without a trace of dictation at any level. Good will is essential to such a consummation, and Nat has radiated it immeasurably. Financially, it is now very tough going for voluntary hospitals—indeed one does not know how in the future they are to be financed—but Nat hands the hospital to his successor as an organism full of creative urge and vigor, seeking to exert itself in the field of greatest usefulness. In his retirement, which we hope will be very active, Nat will watch the growth of seeds he has planted.

This, then, will have to serve as my very brief sketch of him and my heartfelt tribute.

J. H. M.

The Ether Day celebration this year will be devoted to a reception for Dr. and Mrs. Faxon on the evening of October 17. Supper will be served at 6:30 in the hospital cafeterias, followed by exercises in the Moseley Rotunda at 8 o'clock. There will be an opportunity to shake hands with Dr. and Mrs. Faxon after the exercises.

Everybody in the hospital family is welcome. Tickets for the supper may be obtained at the Front Desk after October 5.

* * *

Dr. Dean A. Clark assumed his duties as the fifteenth Director of the Massachusetts General Hospital on October 1. We hope to publish something from Dr. Clark in a very early issue of The News.

* * *

We are losing another of our Assistant Directors. Dr. Ferdinand Haase, Jr. has been appointed Director of the Nathan Littauer Hospital in Gloversville, N. Y. He will leave to take up his new duties later in October.

CHARLES LOCKE SCUDDER

Dr. Charles L. Scudder (*ES* 1889), formerly Chief Surgeon at the Massachusetts General Hospital and for the past eighteen years Honorary Surgeon on our staff, died at Phillips House on August 19, after a brief illness.

Dr. Scudder was born in Kent, Connecticut. He received his A.B. degree from Yale in 1882, a Ph.D. from Yale in 1883, and his M.D. from the Harvard Medical School in 1888, after which he began his practice in Boston. He will always be remembered for his vigorous enthusiasm for every kind of medical activity with which he was associated. In the early days of his practice, in middle life when he was well established in his profession, and even in his later years, he was a never-failing source of inspiration to all—young and older alike—who were privileged to benefit from his teaching or to watch his work as a surgeon.

Dr. Scudder was a noted specialist of international reputation for his contributions to the field of orthopedic surgery. He was the author of eleven publications on the subject of fracture treatments and was at work on a revision of one of his texts when he died. He was also the author of a book on treatment of tumors of the jaw.

Although Dr. Scudder had retired from active practice before World War II, he returned as a volunteer at Massachusetts General during those days of a depleted staff, to teach in our Fracture Clinic. During both World Wars he organized and directed fracture committees to improve the techniques of doctors in New England and in the Maritime Provinces. This program at one time involved more than 2,000 physicians, and Dr. Scudder traveled widely to supervise refresher courses and postgraduate training.

Dr. Scudder was a member of many medical and surgical associations, and had served the American College of Surgeons as Chairman of the regional fracture committee. He also served at the Boston City Hospital in their Out-Patient Clinic.

Dr. Scudder was married in 1895 to the late Abigail T. Seelye, daughter of Dr. L. Clark Seelye, the first President of Smith College. He leaves a son, Evarts Seelye Scudder of London, and a daughter, Mrs. Hilda C. S. Manning of Bronxville, New York.

* * *

Dr. Arthur L. Watkins, Chief of Physical Medicine at M.G.H., was named President-elect of the American Congress of Physical Medicine at the 27th annual meeting of the congress, held in Cincinnati in September. He takes office at the 1950 convention.

The Board of Trustees, at their meeting on August 19, voted:

To accept the resignation of Dr. J. Sydney Stillman as Assistant in Medicine.

To appoint:

Dr. Robert D. Heath as Assistant Resident on

the Orthopedic Service for one year, beginning January 1, 1950;
Dr. John F. Hogan, Jr. as Intern on the Children's Medical Service, beginning July 1;
Dr. Samuel Kaplan as Assistant to the Children's Medical Service.

At their meetings on August 10, and September 7 and 14, the General Executive Committee voted:

To accept the resignation of Dr. William McK. Jefferies as Clinical and Research Fellow in Medicine;
To accept the resignation of Dr. J. Butler Tompkins as Clinical Assistant in Medicine;
To promote Dr. Harry P. Makel to the position of Chief Resident on the Anesthesia Service, as of July 1.

To continue the appointments of:

Dr. Jane A. Allen as Clinical Fellow in Psychiatry, through June 30, 1950;
Dr. Alejandro P. Arellano as Clinical Fellow in Neurology, through December 31;
Dr. Gaston E. Blom as Clinical Fellow in Psychiatry, through September 30;
Dr. John C. Coolidge as Clinical Fellow in Psychiatry, through June 30, 1950;
Dr. Veronica B. Tisza as Clinical Fellow in Psychiatry, through June 30, 1950.

To appoint:

Dr. Francis G. Barnum, Jr. as Clinical Assistant in Medicine;
Dr. Franklin Carter as Clinical Fellow in Psychiatry for one year, beginning July 1;
Dr. H. Chantrenne as Research Fellow in Biochemistry, as of October 1;
Dr. John J. Cranley, Jr. as Clinical and Research Fellow in Surgery, as of July 1;
Dr. Arthur W. Culberson as Clinical and Research Fellow in Neurosurgery for four months, beginning September 1, assigned to the Peripheral Nerve Injury Follow-up Study;
Dr. William L. Davis as Clinical Fellow in Medicine;
Dr. Richard R. Evans as Clinical Assistant in Medicine, assigned to the Allergy Clinic, and with the privilege of helping care for Dr. Rackemann's patients in the Baker Memorial and the Phillips House;
Dr. Richard E. Goldsmith as Clinical Fellow in Medicine, assigned to the Thyroid Clinic;
Dr. Richmond Holder as Clinical Fellow in Psychiatry for the period September 1, 1949 through June 30, 1950;
Dr. Irving H. Itkin as Clinical Assistant in Medicine, assigned to the Allergy Clinic;
Dr. Clara R. Johns as Clinical Fellow in Psychiatry, beginning October 1;
Dr. Alexander Leaf as Clinical and Research Fellow in Medicine, to work with Dr. Albright;
Dr. Harold J. Lehmus as Clinical Fellow in Medicine;
Dr. William J. Shriber as Clinical and Research Fellow in Physical Medicine for the period September 1, 1949 through August 31, 1951;
Dr. Earl Stadtman as Research Fellow in Biochemistry, as of September 1;
Dr. D. Vernon Thomas as Clinical and Research Fellow in Anesthesia;
Dr. Byron H. Waksman as Research Fellow in Neuropathology, beginning September 1;
Dr. Henry Wermer as Clinical Fellow in Psychiatry, as of September 6;
Dr. Masao Yatsuhashi as Clinical Assistant in Surgery, with the privilege of caring for Dr. Langdon Parsons's patients in the Baker Memorial and the Phillips House.

* * *

ACTIVITIES OF THE CORONARY RESEARCH PROJECT OF THE CARDIAC DEPARTMENT

During May and June, the enlarged staff of the Coronary Research Project conducted an intensive study of the morphological and biochemical aspects of maleness at the State Training School, Winfield, Kansas. Much new data was collected on the castrate status in man before the project disbanded.

In addition to Dr. Menard M. Gertler (*clin. & res. fel. M.*) and Dr. Stanley M. Garn (*res. fel. M*), the group was augmented by Dr. Veikko O. Hurme, Mrs. Naomi C. Turner, M.Ed., three graduate students, and Miss Marian Gardner, R.N., of Winfield. Dr. Hurme made gingival biopsies, Mrs. Turner made salivary redox analyses, and the graduate students provided professional assistance to the anthropometry, electrocardiography, serology, and stomatology in progress.

During the three-weeks' stay, the group succeeded in performing a variety of studies on 74 castrate individuals, 25 preoperative, and 65 non-castrate individuals. Intelligence quotients ranged from 65 down to 13, according to the records; nevertheless, unusually good cooperation was obtained. Anthropometric examinations and somatotype examinations were made on all, physical examinations and electrocardiograms on most, while eosinophil counts, gingival biopsies, redox studies, and step tests were made on selected and more cooperative subjects with intelligence quotients above 30.

Evidence of the pressure of the work may be gained from the fact that in one 3-hour working period venipunctures were successfully completed on 83 individuals. There were 84 venipunctures in all—one idiot extended two arms.

The stay was arranged by Prof. J. B. Hamilton of Long Island Medical School, and expedited by Dr. Charles Hawke, Medical Director of the Institution. The Commonwealth Fund of New York, and Mr. Dorsey Brown of Louisville, Kentucky, provided financial assistance.

In addition to other activities, a series of 100 teaching Kodachromes were taken to illustrate developmental anomalies, and electrocardiograms taken to illustrate the various forms of kyphoscoliotic heart disease. Two major speaking engagements were filled by Dr. Gertler and Dr. Garn—one at the County Medical Society, at the Winfield Country Club, on the subject "Coronary artery disease", and one at the staff meeting of St. Mary's Hospital.

Stanley M. Garn, Ph.D.
Menard M. Gertler, M.D.

* * *

The Association of Medical Illustrators met in Boston October 3-6. The President, Ralph Sweet of the University of California Medical School, San Francisco, welcomed the members at a business meeting on Monday, October 3, at the Hotel Lincolnshire. In the afternoon, ten members gave talks on administration of their departments. In the evening, an exhibit of members' work was held at the Peter Bent Brigham Hospital, following addresses by Dr. Robert M. Green and Dr. Francis D. Moore.

On October 4 and 5, the following lectures were given: Mr. Brank Stewart of the Louisiana State University School of Medicine, New Orleans, demonstrated the use of the air brush. A representative of Bourge, Inc. described a new color printing material—Colotone and Solotone. Mr. William B. McNett of the Blakiston Co. of Philadelphia gave a talk on color press work. Master Sergeant Antonio M. C. Cortigas of the Armed Forces Institute of Pathology, Washington, D.C., presented, by an actual casting, his method of casting a model with plastic resin material.

At the Massachusetts General Hospital, the Ladies' Visiting Committee gave a tea to the members of the association. Then followed a tour of the Department of Photography and the School of Medical Illustration, which latter is directed by Muriel McLatchie Miller.

The annual banquet was held at the Hotel Lincolnshire on the evening of October 5. Dr. Reginald Fitz gave the Brödel Memorial Lecture.

The sessions closed on October 6 with a business meeting and an election of officers. The association meetings were held at the Hotel Lincolnshire, the Bellevue Hotel, and the Massachusetts General Hospital.

* * *

Brief bits:—

Dr. Byrl J. Kennedy (*M* 1946) finished his work here as a Clinical Fellow in Medicine on August 31. He has gone to Canada to work as a Damon Runyan Research Fellow. His address is Royal Victoria Hospital, University Clinics, Montreal 2, Canada.

Dr. Ralph H. Luikart, Jr. (*M* 1944 & *a.r.p. D* 1948) has moved to 1525 State St., Santa Barbara, Cal. He says he will send us a bit about his changes and progress as soon as he gets settled in his new office. He adds, "I sure enjoy THE NEWS."

DREAMS

Men pursue phantoms in their dreams,
And so are given back
The waking hours in which they are pursued.
Stirred and tormented by elusive visions,
Disturbed by Spring's keen lance and Autumn's alchemy,
By sight of blossom and by sound of rain,
By sighs and scents and seasons;
By the echo
Of all they lost and longed for
By themselves
And all they have forgotten.

Men, dream haunted always,
Must live again the follies and the fantasies
Which, met in life, had long ceased to be barbed.

D. S. C.

BIOGLETS

Dr. William Frederick Fritz, Intern in Medicine — born in Merrill, Wisconsin; lives in Oshkosh, Wisconsin; A.B., Muhlenberg College, Allentown, Pennsylvania (Navy V-12); U.S. Navy: Philadelphia Navy Yard and Philadelphia Naval Hospital, 1945; M.D., Johns Hopkins Medical School, Baltimore, Maryland, 1949.

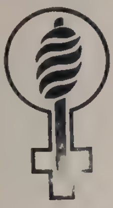
Dr. Nicholas Misplee Greene, Assistant Resident in Anesthesia — born in Milford, Connecticut, July 11, 1922; B.S. in German, Yale University, 1943; M.D., Columbia College of Physicians and Surgeons, 1946; Surgical Intern, Presbyterian Hospital, New York City, 1946-47; U.S. Navy: Obstetrical and Surgical Services, Annapolis, Maryland, for two years; married May 1946; one son.

Dr. Craig Stoddard Lichtenwalner, Intern in Medicine — born in Seattle, Washington, June 1, 1923; education: University of Washington, Fordham University and New York University as an Army student, Long Island College of Medicine, Class of 1949.

Dr. Donald William Sampson Stiff, Resident in Radiology — born in Bristol, England, April 28, 1913; B.A., Park College, Missouri, 1938; M.D., Boston University School of Medicine, 1945; Intern, Mary Fletcher Hospital, Burlington, Vermont; U.S. Army: Fort Bragg, North Carolina, and Korea, 1946-48; Resident in Radiology, Mary Fletcher Hospital, and Fellow in Radiology, University of Vermont, January 1948-June 1949; married 1941; three children; Captain in the Regular Army Medical Corps since October 8, 1948.

Dr. Robert Glenn Tyson, Assistant Resident in Pediatrics — born in Pittsburgh, Pennsylvania, July 24, 1922; Harvard University, 1939-42; M.D., University of Pittsburgh Medical School, 1945; Intern, Philadelphia General Hospital, 1945-46; Diplomate of National Boards, 1946; U.S. Army: Deshon General Hospital, 1946-48; Resident, Children's Hospital of Philadelphia, 1948-49.

Dr. Iwao Uyeda, Intern on the Children's Medical Service — born in Olympia, Washington; home, Tacoma, Washington; temporary home, Chicago, Illinois; B.A., University of Wisconsin, 1940; M.D., Tulane University School of Medicine, 1945; Intern, Springfield Hospital, Springfield, Massachusetts, 1945-46; Clinical and Research Fellow, Harvard Pediatric Study, December 1948-June 1949.



DISTAFF CLUB

As you doubtless know, the Distaff Club is a group made up of the wives of the MGH and EEI House Staff and Fellows. The club ordinarily meets on the second Wednesday evening of each month. However, in October, instead of the regular monthly meeting, the club is sponsoring a picnic at Hammond Woods on Sunday afternoon, October 9. Will the House Staff and Fellows, both single and married, please save that date? Details are posted on the Distaff section of the bulletin board near the house Post Office.

Members of the Distaff Club have tried to get in touch with the wives of all newly arrived House Staff and Fellows. However, since our files are not completely up-to-date, it would be appreciated if any wife who has not yet received an invitation to join the club, and would be interested to do so, would telephone Dorothea Rodkey, LA 3-0133, or Jane Frame, RI 2-0224.

The insigne which identifies Distaff Club notices was drawn by Anne Finkenstaedt. It appropriately shows the distaff, surrounded by the female medical sign.

MASSACHUSETTS EYE & EAR INFIRMARY

During the first two weeks of September, the Infirmary was host to Dr. Katherine Lao, Ophthalmologist, of Changsha, China. Dr. Lao, a diminutive Chinese, observed in the clinics and laboratories of the Infirmary before beginning her graduate course in Ophthalmology at the University of Pennsylvania.

Dr. Lao is one of four Chinese women who were given a year's scholarship by the American Association of University Women, to study in this country. These four women were chosen from a group of over 1,000, interested in all the professions. The Fulbright Foundation has defrayed all travel expenses for Dr. Lao, enabling her not only to come to this country from China but to travel extensively in the United States, visiting many of the eye hospitals and clinics.

Dr. Lao was educated in China and took her medical training at the Yale-in-China Medical School where she later interned. After the completion of her internship in 1944, she was drafted by the Chinese Government and served in the Medical Corps of the Chinese Army until the end of the war in 1945. She then returned to the Hospital of the Yale-in-China Medical School to become Resident Ophthalmologist for three and one-half years.

During the last four months she has visited the Manhattan Eye and Ear Infirmary, the Presbyterian Eye Institute, also of New York City, and the Yale University Hospital in New Haven.

A pamphlet entitled *Bacteriology in Oto-Laryngology* has been prepared by Anita B. Mangiaracine, Bacteriologist at the Infirmary. The pamphlet is an abstract of the lectures given by Miss Mangiaracine in the Graduate Course in Oto-Laryngology under the direction of Dr. LeRoy A. Schall, Professor of Otology and Laryngology at the Harvard Medical School and Chief of Oto-Laryngology at the Infirmary.

Dr. David H. Scott will complete his residency in Ophthalmology on November first and will open an office at 1 Monument Square in Beverly.

Two new residents began their period of service in Ophthalmology on October 1—Dr. Marvin Posner of Troy, New York, and Dr. Irwin Tuch Mancall of Hartford, Connecticut.

Dr. John H. Tucci, Assistant Anesthetist at the Infirmary, has been given a leave of absence to make a tour of various hospitals and infirmaries in the country, to study anesthesia techniques. Beginning September 10, Dr. Joseph P. Holihan, Assistant Resident Anesthetist on the staff of the M.G.H., assumed Dr. Tucci's responsibilities.

A recent visitor at the Infirmary was Dr. Charles R. Morton of Toowoomba, Queensland, Australia. He observed in the clinics from August 23 to September 12.

Dr. Edwin B. Dunphy and Dr. LeRoy A. Schall, Chiefs of Ophthalmology and Oto-Laryngology, respectively, will attend the meeting of the Academy of Ophthalmology and Oto-Laryngology in Chicago, October 10 to 14. Dr. Schall will remain in Chicago for the American Board of Oto-Laryngology, and Dr. Dunphy will go to St. Louis for the American Board of Ophthalmology.

Dr. Carl C. Johnson, Assistant Surgeon in Ophthalmology at the Infirmary, spoke on "Glaucoma and ptosis" at a joint meeting of the North and South Carolina Ophthalmological Societies at Greenville, South Carolina, in September.

Dr. Francis Adler, Professor of Ophthalmology at the University of Pennsylvania, did some research work in the Howe Laboratory during the month of September.

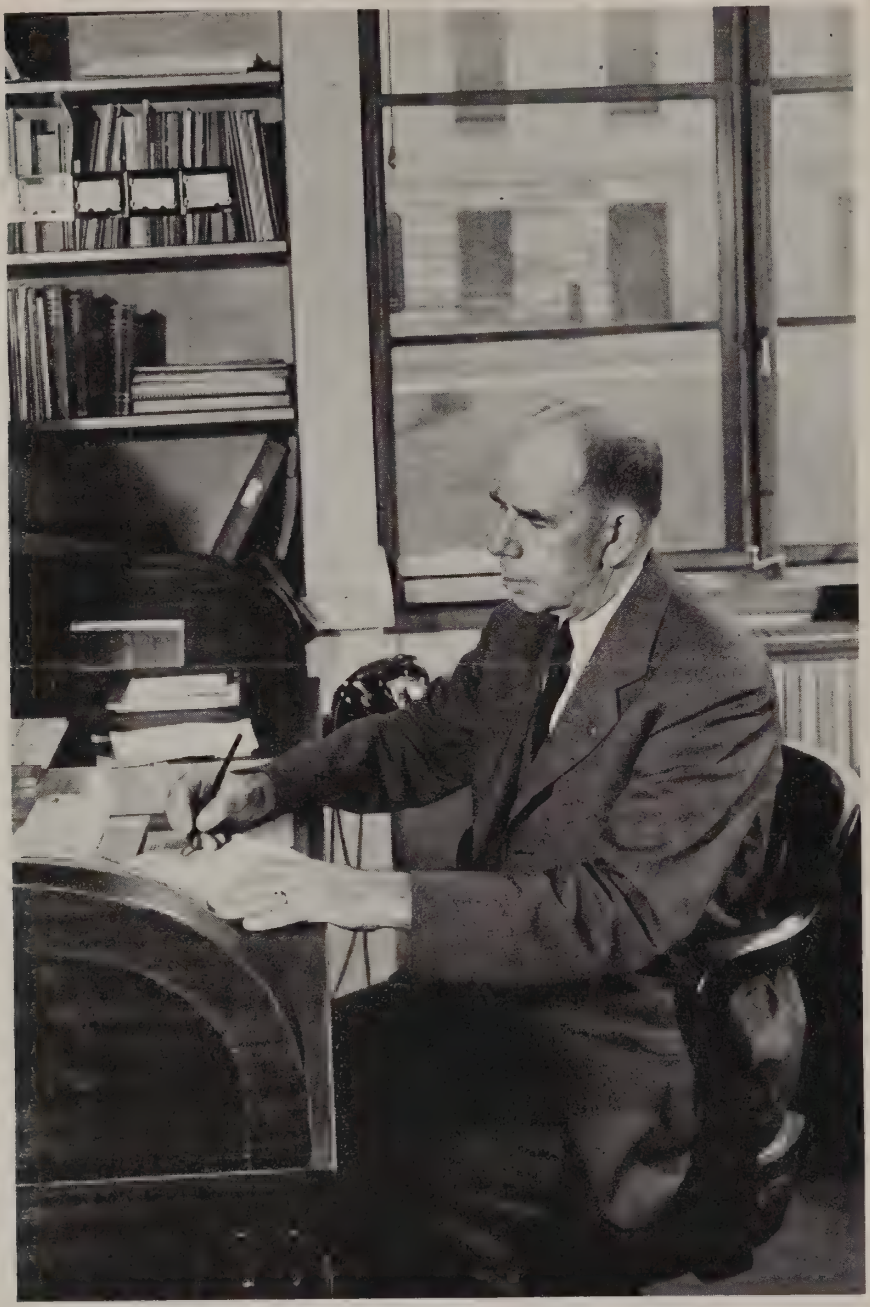
The regular Wednesday clinical meetings of the Oto-Laryngology staff were resumed in the Mosher Laboratory on September 14.

The Postgraduate Basic Science Course in Oto-Laryngology will begin October 17, under the direction of Dr. LeRoy A. Schall.

Dr. Parker Heath, Director of the Eye Pathology Laboratory at the Infirmary and Clinical Professor of Ophthalmology in charge of graduate teaching at Harvard Medical School, is again directing the Postgraduate Course in Ophthalmology which started September 26.

New addresses:—

Dr. Harry E. Braconier, 1180 Beacon St., Brookline 46, Mass.
Dr. Carrie Ethelyn Chapman (*An.* 1937), Aouff Clinic, Knoxville, Tenn.
Dr. Diane Croll (*r.p. P* 1948), Children's Medical Centre, Maple and Welborn, Dallas, Tex.
Dr. Carol C. Dickson (*M* 1948), Apt. 22-A, 1 University Place, New York 3, N. Y.
Dr. E. Grey Dimond (*clin. fel. M* 1949), 1814 Rockmoor Ave., Austin, Tex.
Dr. Hannibal Hamlin (*r.s. NS* 1942), 270 Benefit St., Providence, R. I.
Dr. Richard G. Nilges (*a.r.s. NS* 1949), Cushing Veterans Administration Hospital, Framingham, Mass.
Dr. Earl B. Sanborn (*a.r. NS* 1943), American Legion Hospital, Battle Creek, Mich.
Dr. Wilbur A. Sawyer (*WM* 1908), 770 Hilldale Ave., Berkeley 8, Cal.



Nathaniel W. Faxon, M.D.
14th Director, Massachusetts General Hospital
1935-1949

Dr. Wade Volwiler (*M* 1944), Department of Medicine, School of Medicine, University of Washington, Seattle, Wash.

We were very glad to receive this letter from Dr. Frank B. Norbury (*WM* 1949).

I would like to pass on to you some information about myself which might be of interest to the readers of The News. I have enjoyed reading your publication and hope to continue to enjoy it for a long time.

I am an Assistant Resident Physician in Internal Medicine here at Barnes Hospital. The address is 600 South Kingshighway, Saint Louis 10, Missouri.

On August 30, I was married to Miss Frances Carr of Gulfport, Mississippi. We are living at 4462 Forest Park Boulevard, Saint Louis 10.

I hope you can publish this information soon, so that my many friends in Boston may know about it.

Although Dr. John H. Peters (*WM* 1943) thought he had nothing of particular interest to tell us, see what a very interesting letter he wrote. Many of the rest of you silent ones could do likewise, to the enjoyment of your friends who are waiting to hear from you.

Your recent request for news for The News leaves me somewhat at a loss. I have now finished a second year in Pittsburgh and am enjoying it, but there is not a great deal to report that is new.

My address should be changed to 147 Highland Road, Pittsburgh 16, Pa. This does not represent a new home. Merely a promotion from rural to house-to-house delivery.

Professionally, I find myself a fairly active member of a new department in a medical school that is trying hard to adapt itself to some of the changes brought about by the war and by medical progress, and succeeding well, I think. The arrival of Dr. Parran, formerly Surgeon General of the U. S. Public Health Service, to organize a school of public health marks a great step in this expansion. In addition, a research professorship in Pediatrics has also been established, which will be occupied by Dr. Stevenson, now at the Harvard School of Public Health.

Our own department of Research Medicine, which investigates various aspects of endocrine and metabolic disease from the chemical and clinical points of view, continues to grow. From a start of four rather timid invaders from New Haven on July 1, 1947, we have grown to the point where a group picture on the 30th of last month included 21 persons — 7 of whom are physicians.

We are bursting the seams of our laboratories and offices, but our new laboratory building — scheduled for occupancy last March — is delayed indefinitely, due to various labor difficulties. This is particularly exasperating, since my recent visit to Massachusetts could not include the M.G.H. because I had to hurry back to Pittsburgh in order to be on hand to arrange for some final installations that we never could make because of the strike!

The only other item of note is that I have been appointed Consultant to the chemistry laboratories of the local Veterans' Hospital by the medical school Dean's Committee.

Dr. Means received this letter from Dr. Lincoln D. Clark (*M* 1948), in which he gives his views on socialized medicine, as he sees it, in England.

I am grateful for my two quite invaluable years on your service. My training has already stood me in excellent stead in fulfilling my obligations here at the Maudsley Hospital in London.

Insofar as I am able, I am taking this time to peruse British medical practice as it exists under the National Health Service. I have visited at Guy's Hospital, King's College Hospital, the National Hospital (Queen Square), and spent a day helping a general practitioner see one hundred patients(!). My position at the Maudsley affords a rather complete view of the management of the mentally ill.

There is no doubt that this nationalized system is of great benefit to the average Englishman in the sense of improved medical care, including greater availability of consultant services. In addition, the higher stipends for service as house physicians and registrars have helped the latter individuals carry on far more comfortably while obtaining the higher medical degrees. Many previously-established practitioners and consultants, however, have suffered rather severe financial reverses. But there is surprisingly little grumbling.

I suspect, however, that the hypertrophied sense of social responsibility and fair play, intrinsic in British character, has rendered medical socialization more practicable than it would prove to be in the States.

I am looking forward to returning to the General next January.

More than two years had passed since we last saw the signature of Dr. Robert P. Keiser (*Or.* 1942), and then this cordial letter arrived from him.

I am somewhat ashamed of myself for not having written you a year or so ago. I have enjoyed The News very much for the past several years, and always look forward to reading about my friends, associates, and teachers, who have been or are connected with the M.G.H. Procrastination and letter writing are very closely allied terms in my daily activities.

After leaving the Massachusetts General, I entered the armed services, spending the greater part of my time in Orthopedics at O'Reilly General Hospital, Springfield, Missouri. I then entered private practice in Orthopedics here in Coral Gables.

My practice in this locality, which includes the entire southern part of Florida, is very satisfying. We miss the teaching and highly scientific atmosphere of the General and allied institutions, but try to have a few problems of our own working, at least part of the time. We feel it necessary to get back to the center of things on regular occasions, to catch up and to renew friendships. However, it is always nice to return here to the "best place in the country to live".

Allow me to congratulate you on the excellent work you have done in publishing and distributing The News, which has maintained an important link between the General and all of its graduates.

THE NEWS

No. 84 Boston, Mass. November 1949

OBSTETRICAL SERVICE AFFAIRS

The last report of the Obstetrical Service to appear in THE NEWS was published in 1947. The comments made at that time are as valid today as they were then. Nurses are still scarce and difficult to obtain. When obtained, they are difficult to keep. Pressure by other services to overflow onto the 4th floor of the Phillips House and the 9th floor of the Baker, both supposedly sacrosanct to obstetrics, continues. The Obstetrical Service remains, as it has always been, analogous to the Swiss Navy — small, select, and sometimes overlooked. Occasionally, however, like Kipling's Tommy Atkins, it receives its due measure of thanks: as when a wife or daughter of the MGH family produces an infant in Baker or Phillips House, or when a member of the Staff helps resolve an obstetric problem incident to illness of medical or surgical nature on one of the larger and more prominent services.

Both Phillips House and Baker Memorial reached a peak of obstetric activity in 1947, with 356 births in the former, and 882 in the latter. Although there was a falling off in 1948 in both installations, 717 births occurred in the Baker —the third highest number in a decade, and 229 in the Phillips House.

While the hospital has done its utmost to keep medical and surgical cases off the two obstetrical floors, it has not always been possible to do so when, on occasion, the demand for non-obstetric beds has reached a peak coincident with a low phase of the obstetric census. No one, the writer believes, considers this an ideal arrangement, but at times it has been unavoidable in order to make the most economical use of available beds. Fortunately, the occasion is not frequent.

Adequate care for the mother and infant in the postpartum period is at least 90% a matter of proper and methodical nursing technique. When the nurses on an obstetric floor are inadequate either in skill or in number, the quality of care given to the patients declines. With the contemporary costs of hospitalization, the desire of the average patient to cut her hospital stay to the shortest possible time is a marked feature of obstetric practice in these postwar years. There is so much for the young mother to adjust to — the recovery from delivery, the attitude to the newborn infant, the establishment of a feeding routine for the baby, the new environment in prospect on her return home — that a stay of seven to ten days in the hospital is none too long to prepare her for the immediate future, unless she have nursing care adequate in quality and quantity. By and large, the nurses on the Obstetrical Service are long on quality but often acutely short on quantity. It is to be hoped that this situation will change for the better when the problem of nurse procurement is solved, for the situation as it now exists is not peculiar to the M.G.H. alone.

In its present organization, the Obstetrical Service has no formal program of investigation or research under way. It is doubtful if any such program were feasible. Limited as it is to the facilities of the Baker Memorial and Phillips House, its clinical material is composed of private patients of two physicians who hold the rank of Obstetrician, seven who are classed as Associate Obstetricians, fourteen who hold the title of Assistant Obstetrician, and a scattering few who are on the Board of Consultation or have the courtesy privileges of the Phillips House.

Could there be a program of research, investigation, and development in obstetrics at the Massachusetts General Hospital? It is the writer's belief that there could be, provided one paramount need for such a program were met — i.e., the establishment of a ward service in obstetrics in the General Hospital, with provision for prenatal study and observation in an adequate pregnancy clinic. As these lines are written, the future of the hospital vis-à-vis obstetrics is under study by a Staff Committee composed of Drs. Bartlett, Butler, Chapman, and Ulfelder, whose eventual recommendations may possibly hinge upon the opinion of this committee as to the practicability of establishing an obstetric ward service. The final decision, of course, will necessarily be incumbent upon the policy-making level of Trustees and Staff.

It is believed that the present Obstetrical Service at the Massachusetts General Hospital, even without the advantages which would accrue from the ward service, fills a definite need in the Greater Boston community. The Hospital Blood Bank has been a source of great help in handling emergency transfusion requirements. The Children's Medical Service has been of inestimable value in supervising and treating the newborn, and, with the premature nursery in the Burnham Building available for infants born before their time, offers the Obstetrical Service great help when problems of prematurity are involved. The Anesthesia Service has always covered the Baker Memorial most satisfactorily and may be called upon now for the Phillips House, as well.

This is neither the time nor place in which to discuss the services available to obstetrical patients in the Massachusetts General Hospital as compared with those offered by other hospitals in the community. Such comparisons have been made in numerous verbal and several written reports to the Director. Suffice it to say that a patient who chooses to have her baby at the Baker Memorial or Phillips House is assured of the care of the Staff second to none, and of facilities in handling emergencies which are unsurpassed.

Thomas R. Goethals, M.D.,
Obstetrician

* * *

At a meeting of the Board of Trustees, held on September 16, it was voted that all gifts made in memory of Dr. Frederic A. Washburn should be allocated for the use of the Archives.

This is a very suitable tribute to Dr. Washburn, for, as you may know, it was due to him, more than to any one other person, that we have an Archives Department and that the publication of THE NEWS was resumed in 1942. His active interest in the department was unbroken up to the hour of his death.

A few of Dr. Washburn's most valued possessions are on permanent display in the Archives Room.

* * *

Our deadline date for this issue preceded by a few days the supper party and reception for Dr. and Mrs. Faxon, which took place on the evening of October 17.

Instead of giving you now a list of the events and speakers' names, as indicated on the prepared program, we have decided to wait until the next issue and publish then a complete account of the party, written by one well qualified to give such a significant occasion in our hospital's history the kind of treatment it so rightly deserves.

* * *

Dr. Mary A. B. Brazier, Research Fellow in Psychiatry at M.G.H., was one of six invited speakers at the International Electroencephalographic Congress in Paris this past September. She traveled as representative at the request of the Office of Naval Research and was accredited to the Commander-in-Chief, U.S. Naval Forces, Eastern Atlantic and Mediterranean Base. In addition to the Congress, her tour covered visits to laboratories in Marseille, Paris, London, Geneva, and the International Research Station on the Jungfrau.

Twelve Massachusetts surgeons were recently admitted to fellowships in the International Society of Surgery "because of their distinguished record and honorable standing among surgeons of the United States". We are proud of the fact that seven of the twelve so honored have MGH associations. The list includes Drs. Bradford Cannon, Assistant Surgeon; Jacob Fine, Assistant Resident Surgeon, 1927; Varaztad H. Kazanjian, Board of Consultation; Francis D. Moore, an alumnus and former member of our active staff, now on our Board of Consultation; Marius N. Smith-Petersen, another alumnus and past member of our active staff, now on our Board of Consultation; Grantley W. Taylor, an alumnus, now Visiting Surgeon; and James C. White, an alumnus, now Chief of Neurosurgery at M.G.H.

The International Society of Surgery has its headquarters in Brussels, Belgium. The national committee of the United States includes another of our staff—Dr. Arthur W. Allen, an alumnus and Chief of our East Surgical Service until the two surgical services were combined under one head in 1948, and now on our Board of Consultation.

The Board of Trustees, at their meetings on September 16 and 30, voted:

To accept the resignation of Dr. S. Ramachandra as Intern on the Dental Service, as of August 17;

To create the position of Assistant in Biochemistry and to appoint Robert K. Crane, Ph.D., J. Delafield Gregory, Ph.D., and G. David Novelli, Ph.D. to that position;

To create the position of Assistant in Biophysics and to appoint Dr. Gordon L. Brownell to that position;

To create the position of Exchange Assistant Resident.

To appoint:

Dr. Arthur W. Culberson as Clinical and Research Fellow in Neurosurgery, to serve as Assistant Resident in Neurosurgery from September 1 to 15, until Dr. Richard W. Garrity's arrival;

Dr. Richard W. Garrity as Assistant Resident in Neurosurgery, from September 15 to December 31;

Dr. Robert G. Knapp, Jr. as Intern on the Dental Service, from September 17, 1949 to July 1, 1950;

Dr. Andries Querido as Physician pro tempore for October;

Dr. Earl G. Solomon as Assistant Resident in Psychiatry, beginning January 1, 1950;

Dr. Chiu-chen Wang as Assistant Resident in Radiology, beginning January 1, 1950;

Dr. Edwin O. Wheeler as Assistant in Medicine.

At their meetings on September 21 and 28, and October 5, the General Executive Committee voted:

To grant Dr. Richard G. Nilges, who has served as Assistant Resident in Neurosurgery from January 1, 1949 through August 31, 1949, leave of absence for one year, beginning September 1, to serve as Resident at the Cushing Veterans Administration Hospital, then to return to the Massachusetts General Hospital as Resident in Neurosurgery.

To extend for one year the appointments of:

Dr. Arlington Bensel, Jr., Clinical Fellow in Dermatology, beginning October 1;

Dr. Owen G. Miller, Clinical and Research Fellow in Dermatology, beginning July 1;

Dr. Cone J. Thompson, Clinical Fellow in Dermatology, beginning October 1;

Dr. Harold W. Trott, Clinical Fellow in Dermatology, beginning September 1.

To appoint:

Dr. Andre Duprez as Clinical and Research Fellow in Surgery, as of October 5, to work on the problem of bronchiectasis under Dr. Churchill;

Dr. Elizabeth B. Keller as Research Fellow in Medicine;

Dr. Halfdam Lefevre as Clinical and Research Fellow in Gynecology, to work with Dr. J. V. Meigs;

Dr. Stanton K. Livingston as Graduate Student Assistant in Surgery for three months, beginning October 1;

Dr. Haroldo A. Rodrigues as Graduate Student Assistant in Surgery, as of October 5, to work in the study of sudomotor activity;

Philip Siekevitz, Ph.D. as Research Fellow in Medicine;

Dr. Robert F. Tilley as Clinical Assistant in Dermatology, as of October 1;

Dr. Jerome Waldman as Clinical Fellow in Orthopedic Surgery for the month of January 1950;

Dr. Laura Walters as Clinical Fellow in Dermatology for one year, beginning October 1.

* * *

Apropos of recent newspaper comments about patients who have hiccoughs over long periods, one of the MGH staff sent a letter to Dr. Faxon, in which he detailed his experience in combating this troublesome condition. By accident he discovered, in treating a patient with a 10% solution of calcium gluconate, injected intravenously for another condition, that the hiccoughs which were troubling the patient stopped. Return of the hiccoughs on succeeding days was again controlled by injection of calcium gluconate. Similar favorable results were obtained in other patients where treatment was given directly for hiccoughs.

The staff member doubted whether this was generally known and, learning of a patient of another staff doctor who was suffering from hiccoughs, this treatment was suggested, again with favorable results.

The treatment is the injection of 10 c.c. of 10% calcium gluconate, which comes already prepared in ampules.

* * *

An article from a London paper was sent to us by both Dr. Faxon and Dr. Arthur J. Finck. It is titled "A debt repaid", and reads:

"Sir Richard Fairey, who was Mr. Lewis Douglas's host when the American Ambassador suffered his eye injury the other day—a fishing hook was embedded in his eye as he cast his line—is himself a great fisherman as well as a famous yachtsman. And he is the ideal companion for an American Ambassador, for few Englishmen know America better, or are better liked by Americans. He was long Director-General of our Air Commission in Washington, and a familiar figure on Washington's golf links.

"If Sir Richard's promptitude in driving Mr. Douglas from the riverside to hospital saves the Ambassador's eye, it will be in some sort the payment of a debt he owes to America. He was stricken in Washington with an almost fatal attack of malignant hypertension—a particularly dangerous form of increasing blood pressure—and he maintains that he owes his life to the operations and treatment he received from the specialists at Boston's Massachusetts General Hospital, where he spent three critical months."

* * *

RECTAL CLINIC

The Rectal Clinic was organized by the author as a unit of the Out-Patient Department in 1928, and is now in its twenty-second year of continuous operation as a special clinic. Prior to that time patients with complaints relating to the rectum and colon, both before and after operation, were seen in the General Surgical Clinic and examined with some difficulty due to the lack of a convenient set-up of instruments, lights, etc. for the occasional case as it appeared.

The Rectal Clinic has always been held in the large room of the Male Surgical Clinic, and I believe enjoys the distinction of being the only clinic which has never had a label over the door. Both males and females are handled by the simple expedient of reserving one end of the room for the women, who are ushered into a dressing room adjacent to a screened examining table. Two other screened tables accommodate the men.

For the first year or so the clinic was held one day a week. As the number of patients increased, and it became apparent, also, that many postoperative patients would be benefited by being seen oftener, the change to Monday and Thursday was made, and the clinic has been run on this schedule ever since.

Attendance at the Rectal Clinic has been as high as fifty, which kept two doctors busy from ten until two on more than one occasion. This was true just before the War, during which it seemed desirable to reduce the size of the clinic. This was easily done by lengthening the intervals between appointments of those patients whose ailments justified it—and there were many of these.

During the War, and since, with the marked drop in attendance at all out-patient clinics, presumably due to the advent of Blue Cross and Blue Shield, and a general increase in patients' earnings, the attendance in this clinic has dropped until it now varies from ten to twenty patients. These consist of new cases referred from other clinics, from the wards, or from outside doctors, in addition to those patients returning for postoperative treatments or observation.

Over the years a number of the members of the surgical staff have served in this clinic for periods of four to six months for one or more years. Of this group, Drs. Roy E. Mabrey and George S. Speare have maintained their interest in the clinic and have served continuously for fourteen and sixteen years, respectively, except for the period of three and one-half years when Dr. Mabrey was away in War Service.

Visiting physicians have always been welcome, and it is rarely that at least one visiting doctor is not present. Although we have never kept a registration book for visiting doctors, we can recollect having had visitors from England, Canada, France, Norway, Belgium, Portugal, Spain, Yugoslavia, Italy, Greece, Turkey, Syria, India, China, Brazil, Argentina, Paraguay, Panama, and Chile, in addition to various parts of our own country. This is not to say, however, that all of these visitors made their pilgrimages expressly to visit the Rectal Clinic.

House officers and medical students have never been assigned specifically to the Rectal Clinic, but often drop in when their time permits. They manifest interest in the minor rectal problems which they are seeing on the wards and which are likely to fall to their lot to operate upon.

Postgraduate teaching was first organized on a small scale in 1931, when one doctor enrolled. He was given a three-months' course, held two days a week and listed in the Harvard Medical School Courses for Graduates Catalogue as Course 399—"Diagnosis and treatment of diseases of the rectum". This course was given for three years, with one student enrolling each year. I can find no record of 1934, but in 1935 four doctors enrolled for one or more months and this plan was followed until 1939, when we decided to offer a concentrated one-week course to last all day for six days. This course was given twice a year—in the spring and fall. It was advertised by the Courses for Graduates Office in the J.A.M.A. and apparently filled a need, because the enrollment from the spring of 1939 until 1943 varied from a minimum of six to our established maximum of twelve men, twice a year. These men came from the South and Middle West, as well as from New England, and were quite generally pleased with the idea and the content of this concentrated course. The schedule included three mornings in the clinic and three in the operating room, with the afternoons devoted to lectures and conferences in which a number of other members of our Medical and Surgical Staff participated. In 1943, by decision of the General Executive Committee, all postgraduate teaching at the hospital was discontinued for the duration of the War, except for a few lectures given to Army and Navy officers, and our course has not been revived since the War.

With the shortage of hospital beds in the past, and the long waiting list of surgical patients needing hospital admission, it has always been important for the available beds to be reserved for the more seriously ill patients. In this regard it has been possible, by the use of the injection method of treating internal hemorrhoids, and by other therapeutic measures applicable to ambulatory patients, to diminish considerably the numbers needing admission to the wards. This drop in hospital admissions for rectal complaints was most marked during the earlier years, after which the numbers increased again to some extent.

Although the Rectal Clinic can lay no claim to original discoveries of great merit, papers based on material seen in the clinic have been written by individual members as coming from the Massachusetts General Hospital, and one book has been published. If the clinic can continue to provide accurate diagnosis and good treatment for its patients, and concentrated teaching material for its visitors, it will perhaps have justified its existence as one of the many special clinics of the hospital.

E. Parker Hayden, M.D.,
Chief of Rectal Clinic

* * *

Two members of our staff, who were sent to visit U.S. Army installations in the Far East this summer, have been good enough to give us these interesting reports of their trips. We are hoping to publish soon an account from another staff member, who was sent on a similar mission to Europe.

You ask for a report on our recent fabulous journey to the Far East to visit U.S. Army medical installations, and I am so deeply grateful to you all, as the taxpayers who paid the bills, that I must hasten to reply.

We have perhaps 100,000 occupation troops in the Far East and some 35,000 families of these soldiers. Hospitals, dispensaries, and medical officers must be provided for their care. Medical officers are scarce, and the chiefs of services in the smaller Station Hospitals are often younger men who were "educated at government expense" during the war, had short hospital appointments, and are now on their two-year tour of duty. In order to be sure that these younger men are giving really good medical care, as well as to provide an occasional boost to their morale and professional interests, the Surgeon General conceived the idea of sending out, every four to six weeks, a team of four consultants, specialists in various fields, who would swing around the circuit, make ward rounds, and talk formally and informally with all the medical officers. — Such, then, was the "mission".

The way for our visit had been carefully prepared beforehand by the S.G.O. in Washington and Colonel Blount, the Medical Consultant in Tokyo. We had been asked as to our special medical interests and the subjects upon which we would be prepared to talk. A list of these subjects had been sent to the hospitals before we appeared. This saved me much embarrassment, because no one ventured to ask me whether a given XYZ complex in an ECG was due to a Smith-Brown-Jones syndrome or just a little too much longing to be with his wife who was expecting a baby in Melrose, Massachusetts. So I set forth with a box of lantern slides weighing thirty-two pounds, and my two now famous nylon shirts, to talk about medical problems, and especially lung disease, to anyone who would listen.

The elapsed time was six weeks. Travel was almost entirely by air and the actual flying time about 120 hours. The places visited were San Francisco, Honolulu, Guam, Okinawa, the Philippines, and Japan. In Japan there was a night's train ride north from Tokyo to Sendai, and a night's train ride south to Osaka. There were many way stations. Tokyo and the famous Imperial Hotel was the headquarters for the two and a half weeks in Japan.

"Visits" (not inspections) were made to twelve U.S. Army, two U.S. Navy, and five local hospitals. I "talked" fourteen times in our hospitals, once (through an interpreter) to the Japanese Medical Society (and the Japanese Fishbein), and once to the staff of a Philippine hospital in Manila. There were four conferences with preventive medicine and other Army groups. Besides this, we had many informal ward rounds and talk fests.

The job of a medical officer in these peacetime hospitals is different from what we saw in war time. The medical staff on duty is smaller than that provided by the T of O of the fighting years. There are numberless outpatient clinics to be run, and dependent families provide obstetrical and pediatric problems galore. Chiefs of Services no longer sit behind desks initialing this and that. I was tremendously impressed by one full Colonel, C.O. of the hospital, who had practically turned over the hospital administration to his executive officer, a Medical Service Corps man, and was spending several hours a day in the dispensary caring for patients — and liking it. I can vouch for the statement that he worked from 8 A.M. to 1 P.M. in the dispensary on the Saturday we were there, so that his younger medical officers could make rounds with the "consultants". Times have changed. Of course there are varying grades of excellence in medical work, but on the whole I was very favorably impressed by the way the Medical Department is carrying on.

I'll have to admit that although my leave with Danny Holland in Egypt and Palestine during the war was truly remarkable, it did leave out certain features of the recent junket. I remember that our quarters on the Nile had a sign reading, "For General Officers Only", but if I remember correctly we were not met at the airport at 9 P.M. by a two-star General; entertained for dinner and the evening by another two-star General; assigned a car bearing the letters V.I.P.; shown the most famous sights in Japan, the Philippines, Okinawa, and Guam by Colonels who seemed to enjoy doing it; and finding even the week ends planned for us at renowned resorts. Am I dreaming, or did such things really happen?

One of my pleasantest experiences in Japan was not planned by the Army, but came about because of MGH connections. When Miss Bunker, who is working in the hospital with children's cardiac cases, heard of the proposed trip to Tokyo she asked me to be sure to look up her brother, Colonel Laurence Bunker, who is one of General MacArthur's two aides. So, when I was in Tokyo I phoned Colonel Bunker and he invited me to come to his apartment in the old embassy quarters for dinner and the evening. He said he would be late, because the General was always very late in leaving the office, and he was late, but his Japanese servants kept my glass filled until he arrived. I feel sure he did not divulge any state secrets, but it was a most enjoyable evening.

And then, besides all that, a typhoon — a real one — was put on for us at Okinawa. It's a queer feeling. We arrived at the island by air from Tokyo at 2 P.M. and found that the alert had already been given. Okinawa was in "Phase III", meaning that the typhoon, "Gloria", was 250 miles away but headed straight for us. I am told that a typhoon is like a whirling doughnut, hurtling through the air, spinning wildly in a counter-clockwise direction, and bringing with it torrents of rain. By evening we were in "Phase II" with the whirling doughnut, with the "typhoon eye" in its center, 125 miles away. Windows were then nailed shut, Lister bags filled with water, and C rations distributed to all buildings. By midmorning it was "Phase I", and the electric power was shut off and most of the furniture in the various Quonset huts stacked against the walls and covered by tarpaulins. Then at 11:30 A.M. she really started to blow — 150 and up to 175 miles an hour. The jumbo Quonsets suffered more than the small ones, and the huge metal plates which form their covering were torn off and went sailing through the air like autumn leaves. For two and a half hours she blew and then tailed off, giving an hour's intermission between halves while the eye of the typhoon passed over us. This gave us a chance to assess damage, move beds, plug leaks, and get set for another two and a half hours, with the wind (theoretically) blowing in the opposite direction. Things then quieted for the night.

The morning inspection showed much damage to hospital buildings, but no patients or hospital personnel hurt. One air officer's child had been killed and there were four cases of severe injury in the hospital. A hundred Army families were without homes and the headquarters' staff found their building flattened. The post theater, a big Quonset about three-fourths destroyed, had a sign on the front, "Now playin'. 'Gone with the wind'."

So much for the work and play. Now a summary of *impressions* of the general Far Eastern situation, knowing full well that there was no time to get the real facts.

Japan is a tight little set of islands; full of babies and children, with the population increasing at the rate of one and a half million a year; getting all sorts of U.S. preventive medicine; and already bursting at the seams. Everyone, both U.S. and native, that I talked to, expected things to go on reasonably well so long as our occupation forces *and* MacArthur remained. They would expect the "Russians" to move in as soon as we moved out, and they were definitely worried as to what will happen when the seventy-two year old MacArthur steps down. In medicine, their big problem is tuberculosis and their medical society asked me questions for three-quarters of an hour about the use of streptomycin. At this point the presiding officer called time. The Japanese hospital set-up is interesting, because each patient comes to the hospital attended by a member of his family who sleeps in the room with him and cares for him. This relative brings in the patient's food from outside and cooks it in the common kitchen.

There is still evidence of the tremendous damage of our air raids to the industrial areas outside the center of Tokyo. Usually only the chimneys remain of the once great plants. A single night's raid is said to have killed 65,000 and injured 150,000. But a Japanese staff-car driver told us that his house was burned along with those of many of his neighbors and that he was the only one to return to that area to rebuild. So now he has room for a garden and everything, and he says, "Thank you very much, B-29."

Okinawa is primarily an air base, occupied for "strategical purposes", with the air full of jet planes and other flying devices. I got the impression that it is not a good place to live. If all typhoons are like "Gloria", I am sure it is not. But I understand that "Fay", who preceded "Gloria", and "Hester", who followed her, were much less passionate ladies. However, one wondered whether the stay of officers and soldiers should not be limited to one year and their families kept in the U.S.A.

On one of our sightseeing trips we had as guide a dark young native of about five years who announced himself as "Me Number One Friendo. Me show Suicide Cliff." This cliff, at the far end of the island, is where ten thousand Japanese soldiers, caught between U.S. land forces on one side and the U.S. Navy on the other, are said to have followed the example of their General and jumped to their deaths on the rocks hundreds of feet below. I did not count the skeletons which are still there.

No one told me just what is planned for the Philippines but it looked as if the U.S. was on its way out, except perhaps for an air base. Amalgamation was thought to be going on between the Army and the Air Force. Besides the hospital run by the Army, largely for Air Force personnel, we have one other hospital near Manila — the Philippine Scouts Hospital. All the patients are Filipinos, and 610 of them were in because X-rays taken at the time of their expected separation from service in the U.S. Army showed tuberculosis. Besides our visit at this hospital, we had a very pleasant morning and lunch at the Quezon Institute, outside Manila. This is a native tuberculosis hospital and a very good one, run by an excellent thoracic medico-surgeon.

Guam was primarily a Navy base. Two billion dollars' worth of supplies were, it is said, at one time parked there. The acres of warehouses remain. I did not look inside them. The Army General Hospital was supposed to be closing its doors, looking to "amalgamation" with the Navy. But I've had word since that amalgamation is indeed a slow process.

So you see this was a marvelous trip. Dr. Charles Arnold, my traveling surgical companion from Lincoln, Nebraska, took out a spleen, a thyroid, a malignant growth in the colon, and a gallbladder. He earned his salt. I hope I earned mine. But in any case, I shall never forget the efficient planning and the extremely friendly and continued help of all the medical officers, regular and otherwise. I am deeply impressed and humbly grateful.

Donald S. King, M.D.,
Physician

And here are the impressions of another staff member, sent on a similar mission.

Here is a brief account of my recent trip to the Far East Command (F.E.C.) as a Consultant for the Surgeon General of the U.S. Army.

As the readers of The News are doubtless aware, for some time the Surgeon General has been following a policy of sending civilian consultants at regular intervals to visit the Army medical installations in the various overseas theatres. Just as the fundamental aim of all medicine is the healing of the sick, so the main purpose of the consultants is to see that the patients are receiving the best care. An additional part of their mission is to be of all possible help and service to the Army medical officers and also to review any resident training program, where such exists. As yet, not many MGH men have filled these assignments, but I am sure that more are bound to do so in the future, especially in view of the favorable experiences reported by those of us who have served in this capacity. Dr. Beecher visited Europe as an Army consultant more than a year ago, and Dr. Bland was in Europe this summer at the same time as my trip in the other direction. I was the first urologist, and so far as I know, also the first MGH man to visit the F.E.C. in this capacity. However, Dr. Donald King followed me to F.E.C. only one month later, and he is planning to relate his experiences in The News.

As Consultant, you are worked hard, chiefly at seeing patients and making ward rounds (and you can be sure that they have saved up all the knotty problems for the Consultant!), but also at holding clinics, giving both formal and informal extemporaneous lectures, and in general by being of as much assistance as possible. I operated several times.

As representatives of the Surgeon General you are everywhere treated with the greatest deference, and the friendly hospitality of the Army medical officers to their civilian consultants is outstanding — I might say at times almost overwhelming, if you partook of all that was offered to you. Although the Army works you hard on these tours during the week, they always plan, if compatible with your travel schedule, to send you somewhere nice for the week end — such as the mountain resort of Baguio in the Philippines, and the historic city of Kyoto or the luxurious Fujiya resort hotel when in Japan. All in all, I found it a most interesting, instructive, and pleasant tour.

Traveling by air, I left San Francisco one evening late in May with three other consultants — an internist from San Francisco, an orthopedist from Oklahoma City, and a neuropsychiatrist from Galveston. After a comfortable overnight flight of two thousand miles in a very large and *de luxe* plane, we four arrived in Honolulu early the next morning, and spent the next two or three days at the Army's magnificent new thirty-seven million dollar Tripler General Hospital. Since the joint staffing of military hospitals was recommended by the Hawley Board in order to economize in the use of physicians in the military establishment and to reduce the number of hospitals, the Naval Hospital in Honolulu was closed down and the Tripler also takes care of Naval personnel and has some Naval medical officers on its staff. It is a beautiful and well-run hospital and does good work. The civilians in Hawaii were beginning to be bothered a lot by the shipping strike then, and they must be desperate by now.

We then flew to Guam. This was a long flight (3,500 miles), and we stopped for an hour or so at Johnston Island, a tiny coral "island gas station" seven hundred miles from Hawaii. At Johnston, the island medical officer turned out to be Willard Dalrymple of Brookline, Mass. (HMS '46 — MGH '47). He was most cordial, and showed us his hospital — which was underground, having been built as a shelter from Jap Naval shelling (once during the war). He did not mind too much being on the small island, and seemed to be doing an important job well. After Johnston, we flew to Kwajalein in the Marshall Islands, midway between Johnston and Guam (1400 miles to each), but we stayed there only an hour or so in the middle of the night and so did not see much. Between Johnston and Kwajalein we crossed the International Date Line, and we suddenly went ahead twenty-four hours to the next day. Coming back it was the reverse, and we were set back twenty-four hours to the day before.

About 6:00 A.M. the next day we arrived at Guam. This is a green, tropical island of plateaus and hills, about twice the size of Marthas Vineyard, covered with luxuriant vegetation, including millions of coconut palms. It is bordered by many beaches, with the usual barrier reef of coral. It was hot and very humid when we were there. The native Guamanians are dusky skinned. Due to having been handsomely reimbursed by the U.S.A. for all damages to their coconut trees during the fighting, many of them are not bothering with what used to be their main economic support — the preparation and sale of copra, which is the dried meat of coconuts and is used for coconut oil.

From Guam it was another fourteen hundred miles to the green island of Luzon in the Philippines. This has many mountains covered with luxuriant tropical vegetation. Although hot and humid in the flat region of Clark Field where we landed and of Manila, sixty-five miles away, it is cooler in the hills. We visited Baguio, the summer capital, which reminds one of a good-sized town up in the White Mountains of New Hampshire. Many of the people are quite primitive, especially off in the country or in the hills, and one saw such sights as carabao (water buffalo) pulling ploughs consisting of a crooked piece of wood, or being driven round and round to thresh grain. Women nurse their babies in public, and smoke big cigars. At the present time there is violent political strife between rival factions in the Philippines. Shootings are common, and all Filipinos in and around Manila are said to carry knives, and many carry guns. Law and order are definitely not what they should be, and are reminiscent of the Western frontier days in the U.S., and from that point of view things have never been the same since the U.S. turned over the government to the Filipinos. Manila has not been much rebuilt since it was largely smashed by artillery during the war, and hulks of sunken ships still stick up out of the water in Manila Harbor. To add to the general confusion, the Huks, the guerrilla bands who harassed the Japs so effectively during the war, are now carrying on perpetual guerrilla warfare with the government authorities. It is said that the Huks are Communist-supported, and that their purpose is to keep the country constantly in a disturbed state. Huks and just plain bandits are so numerous that it is dangerous to be out in Manila at night or to drive in an automobile at night outside the city limits.

After the Philippines, we flew eight hundred miles to Okinawa — an attractive but isolated green, hilly island where the natives, a mixture of Ainu-Chinese-Japanese, are peaceful and law abiding. Okinawa is a big island—seventy-five miles long. Whether it is because the China Sea on its west side is cold, while the Pacific to the east is warm, I don't know, but at any rate Okinawa always seems to be a port of call for every typhoon in that region — and some of them are pretty rough, from what I heard.

From Okinawa we flew another eight hundred miles to Japan, where I stayed for a month. To try to give one's impressions of present-day Japan in a short letter is, of course, impossible. To begin with — everyone seems to feel that General MacArthur is doing a good job with the Japanese Occupation. The American occupation force — Army, Navy, Air Force, and civilians — seem to be doing their work well and to be well-behaved. The American dollar goes far in Japan, and many of the occupation personnel, especially the married ones, have "never had it so good before", particularly as servants are good and cheap. As in all occupations where the soldiers stay in one place for a long time, are not in combat, and have considerable free time, many of the soldiers have steady Japanese girl friends. In off duty hours, there is a good deal of alcohol consumed, and there are a good many jeep accidents, largely due to carelessness and drinking.

As for the Japanese, they are serious and extremely industrious, but often the traditions of centuries are so influential in their thought, that they fail to adopt modern views and methods. They would rather do things by hand than by machinery — just the opposite of the average U.S. citizen. For example: they won't use a lawn mower, preferring to have several people cut the lawn by hand with long knives. Mechanically they are great copiers, but do not seem to have the true mechanical ability or "know how" possessed by the average American youth. They are also liable to take absolutely literally whatever is told them, which sometimes creates difficulties. They accept the American occupation in a philosophical matter-of-fact way, as being what happens when one loses a war, are polite, and seem tolerant of our being there. The children are very friendly, and our soldiers treat them well, give them candy, play with them, etc. Having the Emperor, whom they had been brought up to believe was divine and upon whose face they dared not look, renounce his divinity and go about visiting factories, speaking to them, attending baseball games, and so on, just like an ordinary human being, must cause great perplexity and mental trauma to many of the Japanese, especially the older ones. Sometimes it seems as if they had transferred their spirit of Emperor-worship to General MacArthur.

Due to the Army's policy of evacuating to the U.S. all patients with cancer and those who will require a series of complicated surgical procedures, also all soldiers who will not surely be back to duty in one hundred twenty days, many of the more elaborate surgical operations which are commonplace at the M.G.H. are not performed in Army hospitals overseas. Therefore, the surgery is largely that of acute emergencies, such as appendixes, perforated ulcers, etc., or of traumatic emergencies caused by such things as jeep accidents, falls, shootings, etc. It is an orthopedist's paradise, as there are many fractures. Also, there are many hernia repairs, hemorrhoid operations, and so forth.

The only MGH man I met in Japan was John Isherwood, who was formerly in the X-ray Department. Now a full Colonel and Chief of the X-ray Department of the most important hospital in Japan (the 49th General, in Tokyo), he is the leading and most respected roentgenologist in the whole F.E.C. John and his wife had me out to dinner at his attractive home in the new Army development outside of Tokyo, and we had a delightful evening together discussing Boston and the M.G.H.

On the evening of July seventh, Don King and I met and had dinner together at the Hotel Imperial in Tokyo. On the morning of July eleventh, I was ten thousand miles away, having breakfast on the plane from New York to Boston.

It's a small world nowadays.

Richard Chute, M.D.,
Associate Visiting Urologist

MEDICAL HOUSE STAFF NEWS

The Medical Service welcomed back five of our ex-interns as assistant residents on October 15. They are Drs. Bill Christenson, Boy Frame, Anne Godley, Donald McCann, and John Stoeckle. Of the assistant residents leaving service, Hugh Chaplin, John Littlefield, and Morton Swartz will return as residents after a brief vacation. Dr. Warren Bennett left us for the Pratt Diagnostic Hospital, and Dr. Ronald Bishop has gone to the Veterans Administration Hospital in West Roxbury.

The house staff also lost Dr. Rita Kelley, who finished her residency on October 15. She will join the Huntington staff, so she will continue to be in the hospital, handling various problems in the treatment of malignant disease.

Her place has been taken by Dr. Morton Swartz. The Eye and Ear Infirmary and various services treating diabetics will see a lot of Dr. Swartz in the next two months.

The first Medical House Staff Conference since spring was held on September 29. Drs. Ernest Craige and Royal Schaaf explained the use of unipolar electrocardiography.

During the past few months several of the assistant residents have given a great deal of their valuable spare time to the installation of an artificial kidney. Drs. Bill Christenson, Boy Frame, Donald McCann, and Holly Smith have been responsible for this important piece of work. We are all eagerly awaiting the further developments of this project.

Charles H. DuToit, M.D.,
Chief Resident

BIOGLETS

Dr. Agnes S. Burt, Intern in Pathology—born in Portland, Oregon, January 9, 1917; B.A., Reed College, 1935; M.A., University of California at Los Angeles, 1937; Ph.D., University of Chicago, 1943; U.S. Navy: Naval Air Station, Pensacola, Florida, and Naval Hospital, Bethesda, Maryland, 1943-45; M.D., Cornell University Medical College, 1949.

Dr. George D. Ludwig, Third Assistant Resident in Surgery—born in Johnstown, Pennsylvania; B.S. in Chemistry, St. Vincent College, Latrobe, Pennsylvania, 1943; M.D., University of Pennsylvania, 1946; Intern, University of Pennsylvania Hospital, 1946-47; U.S Navy: engaged in medical research at Naval Medical Research Institute, Bethesda, Maryland, July 1947 – July 1949.

MASSACHUSETTS EYE & EAR INFIRMARY

Public announcement of Mr. Francis S. Hill's appointment as Director of the Infirmary was made by Mr. Henry Hixon Meyer, President of the Board of Managers and Corporation, at the first fall meeting of the governing boards, held on October 19 at the Infirmary. The meeting was followed with a tour of the hospital, to inspect progress on reconstruction, and a dinner in the Infirmary cafeteria for the members and their wives.

After the business meeting, a 20-minute 16 mm. color, sound motion picture was shown which explains the instruction in esophageal voice for total laryngectomy patients, and which was made at the Infirmary through a grant from the American Cancer Society. The picture is intended for interested medical groups, as Dr. LeRoy A. Schall, Chief of the Ear, Nose and Throat Service, feels that while the method is not unique at the Infirmary, Mrs. Doehler, the teacher here, has perfected it and carried it further than have esophageal voice teachers in the two or three other parts of the country where it is also taught.

The picture shows in explicit detail just how Mrs. Doehler teaches breath control and phonetics, as well as the mechanics of using the esophagus in producing sound after the larynx has been removed because of cancer. The case of a typical patient is dramatized. The action begins with the interview in the doctor's office, where the patient is told that while he must face total laryngectomy, he will not be voiceless if he will study with the classes in the esophageal voice. The picture ends with his complete rehabilitation in his home and his office, where he can not only make himself understood with his new voice but can carry on normal conversation. This patient, and the two others who are shown as returned to their previous occupations, are actual authentic cases—the parts played by the patients themselves.

The New England Ophthalmological Society and the New England Oto-Laryngological Society will hold their fall meetings on November 15 and 16, respectively. Dr. LeRoy A. Schall will preside at the Oto-Laryngological meeting, and Dr. Edwin B. Dunphy, Chief of the Eye Service, will preside at the afternoon session of the Ophthalmological meeting.

On November 16, the Alumni will be the guests of the Infirmary for the annual luncheon, to which the Residents are also invited.

At the parents' meeting of the retro-

No. 19 in a series of Staff photographs
Dr. Tracy B. Mallory — Chief of Pathology and Bacteriology

lental fibroplasia children, held at the Infirmary on September 16, announcement was made of the formation of the National Foundation for Eye Research. The parents taking part in the retrolental fibroplasia study felt the need of such a research foundation and have pioneered in its formation. Mr. George Swartz, chairman, stated that the purpose of the Foundation was: "to promote research into blinding eye diseases".

Dr. L. Gregg McAlister of Sydney, Australia, widely known for his study on the relationship of congenital blindness in babies to the pregnant mothers' exposure to German measles, lectured to the residents in Ophthalmology and Pediatrics on this subject on September 14.

New addresses:—

Dr. Harold E. Elrick (*M* 1944), Akademiska Sjukhuset, Upsala, Sweden.

Dr. Lytt I. Gardner (*CM* 1944), Dept. Biological Chemistry and Nutrition, School of Medicine, University of North Carolina, Chapel Hill, N. C.

Dr. DeForest E. Hale (*a.r.p. R* 1949), Syracuse University Bldg., Syracuse, N. Y.

Dr. Arvil J. Hinshaw (*ES* 1947), 6835 Burkett St., Houston 4, Tex.

Dr. Joseph A. Holmes (*P* 1936 & *ES* 1938), 751 Main St., Waltham 54, Mass.

Dr. Daniel F. Milam, Jr. (*S* 1949), Room 226, Sr. BOQ, Naval Air Station, Jacksonville, Fla.

Dr. Laszlo Ormandy (*Or.* 1943), 4 Park St., Concord, N. H.

Dr. Oglesby Paul (*WM* 1943), 122 South Michigan Ave., Chicago, Ill.

Dr. Edgar B. Phillips, II (*CM* 1948), 40 President Ave., Providence, R. I.

Dr. Charles G. Rand (*clin. & res. fel. CM* 1949), 4062 Union Bay Circle, Seattle, Wash.

Dr. Arthur A. Wills, Jr. (*Asst. in Psychi.* 1937), 815 Sheraton Bldg., 10 Post Office Square, Boston, Mass.

Dr. John B. Youmans, Dean, University of Illinois College of Medicine, 1853 West Polk St., Chicago 12, Ill.

Brief bits:—

Dr. Ronald C. Bishop (*M* 1945) is now working as a Resident in Medicine at the West Roxbury V.A. Hospital. His address is 16-5 Garden Lane, Waltham 54, Mass.

The Salmon Committee on Psychiatry and Mental Hygiene has announced the Seventeenth Series of the Thomas William Salmon Lectures, to be given by Dr. Stanley Cobb, Chief of our Psychiatry Service. The lectures will be given at Hosack Hall, New York Academy of Medicine, 2 East 103rd St., New York City, on the evenings of November 8-10. Dr. Cobb's subject will be "Emotions and Clinical Medicine".

Dr. Edwin M. Cole, Associate Neurologist at M.G.H., sends us this note: "Had a very interesting time at the Fourth International Congress of Neurology in Paris, September 5-10. After the meetings in Paris, I spent some time in London and Oxford, visiting the National Hospital at Queen Square and also Dr. Richie Russell's work at the Radcliffe Infirmary in Oxford, particularly visiting the Rehabilitation Unit for Aphasic Veterans outside of Oxford. The work done there is very stimulating and the visit was well worth while. The meetings in Paris were very well attended. It was nice to see several of our Boston group there. The whole occasion was a splendid one."

The Dermatology Department had a distinguished visitor recently — Dr. Gustav F. Riehl, Professor of Dermatology at the University of Vienna.

Dr. Menard M. Gertler (*clin. & res. fel. M*) has closed his office on Marlboro Street and now has his office at M.G.H.

Dr. Walter F. Lever, Assistant Dermatologist on our staff, has just published a book entitled *Histopathology of the skin*. The J. B. Lippincott Co., Philadelphia, is his publisher.

Dr. Howard B. Sprague, Associate Physician at M.G.H., is the President-elect of the American Heart Association.

Dr. Jesse E. Thompson (*ES* 1943) has gone on a Rhodes Scholarship to the Nuffield Institute for Medical Research at Oxford University, England. He will be gone for a year, and has taken his family with him. He will specialize in cardiovascular research.

Dr. Cope has passed on to us this letter from Dr. Edward V. Johnston (*WS* 1947), parts of which are of general interest. From what we have been able to gather, Dr. Johnston is headed toward the Mayo Clinic. If we are wrong about this, we hope to be set aright. The letter reads:

> Beginning in September, I shall work for my M.S. in Anatomy. This will be of help to me both in its application to clinical surgery and for my board requirements. Dr. Anson at Northwestern, an old Harvard man, has been most helpful in arranging my program, plus a part-time job in the afternoon.
>
> I have lost track of many of the fine lads in my surgical group at M.G.H. Could you pass on a part of this letter to The News, so that I might hear from them?

Dr. A. William Reggio (*WS* 1914) sent us a card announcing his change of address from Washington, D.C. to School St., Medfield, Mass. On the reverse side of the card we found this message, which we consider too good to keep to ourselves. It reads:

> Hiya, Madam Editor!
>
> A bit of news, if of interest? Am being "Retired" from the Regular Corps on November 16, with rank of Colonel. So HOME we go, as per notice herewith. Annie Dominie has snuck up on me and Uncle Sam has no more use for spavined, broken-winded old buzzards, and Emerituses you when you hit that age. Sure, plenty of steam in the old boiler yet, and I have no intention of being turned out to graze. However, that "terminal leave" is going to be kind of nice. This job has been fun, but it will be more fun to get back home and pick up again where we left off in '44 when we headed for "Bedlam on the Potomac".

THE NEWS

No. 85 Boston, Mass December 1949

THE PARTY

It was a brau bricht nicht the nicht of October 17, when shortly after 6:30 P.M. a Hieland lad in dress tartan piped Dr. and Mrs. Faxon and their table party to the nurses' dining room. Most of the other six hundred guests were already there, filling not only the main room but the supervisors' and west dining rooms as well. Decorative motif was harvest festival, with pumpkins and fruit to brighten the tables. Gay chatter filled the air. All gave Dr. Faxon a heart-warming reception as he and a small escort visited each dining room to greet the friends mid-way through the meal. While there were no speeches in the dining room, the piper's appreciation of Dr. Means's special contribution to his comfort prompted him to drink a gracious toast with it to Dr. and Mrs. Faxon.

At almost eight the procession from the dining room reached the Moseley Rotunda, where, set up in reverse, the benches faced a speakers' platform backdropped by the hospital-seal flag. Mr. Francis C. Gray, M.C., welcomed the guests, then went on to say that the Trustees had only recently come to the full realization of how big Dr. Faxon's feet really are. An exhaustive search, and the consideration of numerous possible candidates, had been required before they succeeded in finding a man who, they felt, could fill those shoes. Dr. Clark and Mrs. Clark, introduced at this point, received an enthusiastic ovation. Dr. Clark expressed his pleasure over being here and his hope that he would prove deserving of such a distinguished honor.

Mr. Gray next introduced the speaker of the evening, Dr. C. Sidney Burwell. Dr. Burwell traced the parallel between his connection with the hospital and medical school and Dr. Faxon's with the hospital. During the time he was Dean and Dr. Faxon Director, relations between the school and the hospital were cordial and harmonious, which had not always been the case, especially at the time the school contemplated moving to its location on the riverbank adjacent to the hospital a hundred years ago. He spoke of the changes in medical practice during the past fourteen years and of the improvement of facilities of the hospital, and paid tribute to Dr. Faxon's "infinite resource and sagacity".

In closing, Dr. Burwell read a short poem about Messrs. Rand and McNally, recalling the days before the war, "When our toughest job was to sit and think shall France be purple and Britain pink?" which he then paraphrased thus:

"Remember those days," Nathaniel said,
"When the annual balance was black, not red?
When the staff was small and there wasn't any
Crockett
Putting his hand into other people's pocket?"
"Those days," said Trustee Francis Gray,
"Like dinosaurs are passed away.
We have rising costs and heavy taxin',
But thanks to Nathaniel W. Faxon,
The M.G.H. future is bright, not dark."
"You said it, brother," said Dean A. Clark.

Following this, Mr. Hatch, Poet Laureate of the Trustees, was introduced. He read a masterpiece created for the occasion (*see* below) and crowned Dr. Faxon with a chaplet of flowers, much to the latter's embarrassment and the audience's delight. As might be surmised, this classical form of acclaim gave him an appearance never approached by even his most dearly cherished Homburg.

Next, Mr. Macomber, President of the Corporation, was introduced, who expressed, for them, appreciation of Dr. Faxon's skillful handling of the complexities of the hospital, as observed by him on numerous occasions and in many situations through the years. Thus, he led up to the presentation of the gifts which had been purchased by contributions from members of the corporation, the professional staff, and the employees. The first one was a portrait of Dr. Faxon, which Mr. Macomber called upon Dr. Churchill to unveil. This was really for Mrs. Faxon, Dr. Churchill said. It was a copy of the one painted in anticipation of Dr. Faxon's retirement. During the year or more when it hung over the sideboard in the Resident Physician's House, she had become so fond of it that she often expressed her sorrow over having to leave it. This copy is the same in size, and fully equal to the original in brilliance and in fidelity to the expression and character of the subject. The second gift, Mr. Macomber explained, was only of solid silver, though given to one whose heart was of solid gold. Dr. Means, called upon to present it to Dr. Faxon, described it for those who were not near enough to see the details. It was a cigar box, or humidor, stogie size, straight as to sides, with gently rounding top on which the Bulfinch Building was engraved. On the front an inscription read, "Nathaniel Wales Faxon, from his friends at the M.G.H.". Inside was a paper bearing a poem of Kipling's — the one beginning "Open the old cigar-box". Dr. Means read only a part of this, omitting some out of deference to the ladies, but it may be said that the poem was in favor of smoking, especially cigars. (*Author's note:* While nothing was said about fishing tackle in connection with this box, we now understand it to be of convenient size for such articles.)

So came the time for "a few words" from Dr. Faxon. Slowly and with obvious emotion he began, first thanking all for their kind thoughts and beautiful gifts; next, going on with a more formal review of the high lights of his long connection with the hospital and the pleasure he had taken developing and administering it. Then, passing through the respectfully-standing audience, he and Mrs. Faxon, with Dr. and Mrs. Clark, took station in the White Building lobby, where the guests passed by to shake their hands, take leave of them, and wish them well.

C. L. C.

Soon after The Party, Dr. Faxon sent us this letter, with a request that it be published in this issue of THE NEWS:

During the last fourteen years, as Director of the M.G.H., it has been my great good fortune to have renewed many old friendships and to have established equally pleasant friendships with newer members of the Staffs. To see so many of you at the Ether Day festivities on October 17, 1949 and to receive your kind farewells and words of commendation was an experience that I shall never forget.

It is impossible to thank you all personally for those kindly words and for your contributions which made possible the gifts of the portrait to Mrs. Faxon and of the lovely silver box to me. Each present will ever remind us of our happy years at the Massachusetts General Hospital.

So we hope that every member of the medical, nursing, and administrative Staffs will accept this public expression of our gratitude as if addressed to him or her personally.

Sincerely,

NATHANIEL W. FAXON.

* * *

Photographs of the members of the Massachusetts General Hospital Staff and Alumni who gave their lives in World War II are to be placed in Treadwell Library. A simple ceremony honoring that occasion will take place in the Library at 10 o'clock, Friday morning, December 9. Members of the immediate families of the men who died, and the hospital staff have been invited to attend.

* * *

The first meeting of the newly organized New England Cardiovascular Society was held at the Massachusetts General Hospital on November 7, under the chairmanship of Dr. Edward F. Bland. This organization is replacing the New England Heart Association, which was founded twenty-eight years ago for the presentation of scientific work currently in progress in the various teaching hospitals of this and other New England cities. The change in name and organization has seemed desirable because of the assumption of new responsibilities and activities by the State society, to be known henceforth as the Massachusetts Heart Association. The latter organization is now primarily engaged in the raising of funds for the study and prevention of heart disease.

MISS SARA E. PARSONS

Miss Sara E. Parsons, who was Superintendent of Nurses at the Massachusetts General Hospital from 1910 to 1920, died at the Mt. Pleasant Home, Jamaica Plain, on October 25.

Miss Parsons was graduated from the School in 1893 and was a Head Nurse on Ward A for one year. She then went to the McLean School of Nursing for a year's postgraduate course and remained there for a year as Supervisor. While at McLean she became deeply conscious of the importance of the right kind of nursing for the mentally ill. During the subsequent years she was superintendent of nurses in four mental hospitals. She created schools of nursing in two of them: Butler Hospital, Providence, Rhode Island, and the Sheppard and Enoch Pratt Hospital, Towsen, Maryland. Between these positions Miss Parsons went abroad twice, had a year of study at Teachers College, Columbia University, and during the Spanish-American War went to Cuba to bring back sick and wounded American soldiers on the Hospital Ship *Bay State*.

It was in 1909 that Miss Parsons first returned to the Massachusetts General Hospital. She came to take the course in Hospital Administration which Dr. Washburn had established. When it was completed in the fall, she went to equip and to open the Griffin Hospital in Derby, Connecticut.

In May of 1910 Miss Parsons was appointed Superintendent of Nurses at the Massachusetts General Hospital. Her administration was far in advance of its time. A few examples of this fact are: shortening of the students' week on duty; provision for social activities; liberalization of school regulations; establishment of student government; enrichment of the curriculum; appointment of two full-time instructors to the staff; and influencing the Alumnae Association to create an Endowment Fund for the School of Nursing. While at the School she wrote her book, *Nursing problems and obligations*.

From June 1917 to March 1919, Miss Parsons was on leave to serve as Chief Nurse of Base Hospital No. 6, stationed in Bordeaux, France. Miss Parsons's personality was one of warmth and cordiality. Already, at home, the students and graduates realized her genuine and productive interest in their welfare and advancement. In Base Hospital 6, the nurses soon developed a deep and lasting affection for her. This affection was nurtured by Miss Parsons's good sportsmanship, evidenced as she shared the inconveniences and hardships of war service. But above all, they loved her for the security of her fair judgment.

After Miss Parsons resigned in 1920 her interests in nursing continued as she worked for nursing legislation, and as she made surveys of schools. The School of Nursing today takes pride in the possession of a history of the School which Miss Parsons published in 1923.

S. J.

ROBERT OLIVER HENDERSON

Mr. Robert O. Henderson died on October 17 at his home in Somerville. Although he was eighty-two years old, he had continued to be very active and was apparently in excellent health. The heart attack which caused his death came suddenly, and the end was almost immediate.

For 52 years Mr. Henderson had been a beloved and efficient member of our hospital family, serving first as male nurse and later as orderly. For several years prior to his retirement in 1946, he had held the position of Head Orderly in the Phillips House. One who was close to Mr. Henderson in his work at the hospital summed up his efficiency in these words: "He would listen in his quiet way, but we always knew that things would get done."

Mr. Henderson is survived by his widow, who is a special nurse on the Phillips House staff, two sons, two daughters, seven grandchildren, nine great-grandchildren, and a brother and sister.

The Board of Trustees, at their meeting on October 28, voted to appoint:

Dr. Alexander S. Macmillan, Jr. as Second Assistant Resident in Radiology, beginning July 1, 1950;

Dr. Isaac M. Taylor as Chief Resident on the Medical Service to succeed Dr. Berg, effective January 1, 1951.

At their meetings on October 19 and 26, and November 2, the General Executive Committee voted:

To extend the appointment of Dr. Jorge Rodriguez-Arroyo as Research Fellow in Surgery from November 1, 1949 to January 1, 1950.

To appoint:

Dr. Raymond L. Gerard as Research Fellow in Medicine, to work under Dr. Bland;

Dr. Richard R. Howard as Clinical Fellow in Medicine;

Dr. Alexander G. Matoltsy as Research Fellow in Dermatology, as of October 1;

Dr. John S. Prichard as Clinical Fellow in Neurology for the period October 1, 1949 through June 30, 1950;

Dr. John N. Swanson as Clinical and Research Fellow in Medicine, to work under Dr. Walter Bauer;

Dr. Richard D. Tonkin as Clinical and Research Fellow in Medicine, to work under Dr. Donald S. King.

* * *

The 1949 Red Feather figure set for the hospital was $12,000. As usual, we oversubscribed our quota — this year by about $500.

Here is that masterpiece, mentioned earlier in "THE PARTY":

WHAT TO DO 'TIL THE DOCTOR COMES

or

We tip our hat to Nat
and *that's that!*

By Francis W. Hatch

The moment has arrived, and here we stand
hand in hand to place the laurel crown
upon a brow deserving of renown.
Recognition from physicians,
gaiety from the laity,
and let the praise of surgeons
burgeon as they raise
their voices to acclaim the one
who's proved a loyal son of
Aesculapius—
though it doesn't follow
that Nat's a great-great-grandson
of Apollo!
(I offer here the tenderest apology
for this slight detour toward mythology)

Who is this worthy citizen I dote on?
Born in Stoughton, 1880 so the records say
And shortly after he went through
Fair Harvard with the class of nineteen-two—
he didn't fool—to medical school
he pressed ahead to graduation
thereafter taking station, interning
and learning within these very walls,
answering the calls of his superiors
pleasantly, and presently
this serious lad returns, and earns
the love and loyalty of all in Stoughton.
His patients there who, like the writer, dote on
his skill and zeal
his will to heal
his hand to feel
the skipping pulse and diagnose the ill,
prescribe the pill for all God's ailing chillen
back in the days when boons like penicillin
and sulfa drugs were merely stars to wish on
fantastic as today's atomic fission.

What next? In nineteen hundred seventeen
the Kaiser's greenclad troops were over-running
Belgium, and sunning themselves victorious
in Northern France—glorious
in the eyes of Hindenburg,
but curious how spurious
attacks on, an undefended country
seemed to Faxon!
and straightway into khaki now we see him
singing his matutinal Te Deum
to Pershing and to Foche and all the rest
who like himself joined up to purge the pest.
The war is won, and homeward bounds our Hector
and promptly finds that he is made Director,
assistant to the M.G.H.'s Chief,
his stay is brief, for Strong Memorial soon drafts him—
Rochester where patients pay their doc
with juicy blocks of Eastman Kodak stock
and every share when put to bed at night
splits ten for one before the morning light.

For thirteen years then in this bailiwick
he stood his trick at the wheel and lo
the M.G.H.'s siren starts to blow.
He hears the call and much to our relief
in nineteen thirty-five he's made our Chief.
A post he's held until this very night
with all his might, so infinitely wise
that every time his back was turned there'd rise
a brand new building adding to his woe;
nobody knows how he absorbed the Baker and the White
and got a moment's decent rest at night.

What is the measured magic of the man,
how does he plan and execute with calm
and hold in the palm of his hand

this vast detail, *and never fail?*
His energy, they say, is fortified each day
with carbohydrates in a candy bar—
(you'll find his desk abounds
with "Chocolate Coconut Mounds"
by Peter Paul and all the gaudy labels
which furnish bright romance for radio fables).
And for relief whene're a problem lingers
he twirls his glasses round and round his fingers.
Economy's the watchword and his orders
are often penciled on the dog-eared borders
of envelopes to make the needed saving
that spares the money-raisers' extra slaving.

Has he a special flavor that he savors—
a taste that may reveal by its appeal
his vaunted predilection for perfection?
He has indeed. His secret dream at night
would be an ice cream ocean all bedight
with macaroons—yet one detail I stress,
the flavor must be *chocolate, no less!*

His favorite sport is fishing from a boat,
and one revealing habit, too, we note;
when answering the telephone, instead
of fidgeting he briskly rubs his head.
Respectful of the rules, he never smokes
within his office where the passing folks
could see this lack of discipline, but lo
it pleases him on busy days to go
into the Trustees' Room where he is able
to spread his papers on the ample table
and light an Overland with carefree feeling
blowing smoke rings upward to the ceiling.

It all adds up that here we have a man
who's proved conclusively he can
  be calm under fire
  tougher than wire
  with Coolidge's gift
  for practising thrift
  who wades without fail
  through seas of detail
  who's kind in his ways
  no seeker for praise
  who proved there is fun
  in a tough job well done.

And now let the doves
in the dear Bulfinch tower
coo out their praise
all night on the hour
joining us all
who have loved your direction
  in stating you always
  will hold our affection.
  The nurses, the doctors
  the maintenance crew
  and every division
  the hospital through
  of course, not forgetting
  the least of all these
  your proper Bostonian
  Board of Trustees—
  We all press our hand
  on the M.G.H. klaxon
  and blast a salute to
  Director Nat Faxon!

So Nat,
that's that!

* * *

RHEUMATIC FEVER CLINIC

The Rheumatic Fever Clinic, which is held weekly on Thursday afternoons, is under the supervision of the Cardiac Group, headed by Dr. Edward F. Bland.

Its history is rather complicated. Although it came to be known by its present name only 10 years ago, its origin dates back to 1912. It was then that Dr. Fritz Talbot started the Children's Cardiac Clinic, and it should be noted that it was one of the first such clinics in this country. Dr. Talbot's program went much further than mere clinic care and included hospital care, supervision of bed care at home, provision for amusement and education, convalescent homes, vocational guidance, and prolonged supervision. The medical supervision of the clinic was begun by Dr. Richard S. Eustis and was later taken up by Dr. Paul D. White, with the aid of members of the Cardiac Group and many others. In 1926 an Adolescent Cardiac Clinic was found to be necessary to care for those patients who were no longer children, and included in this clinic was a follow-up program for former House of the Good Samaritan patients, under the direction of Dr. T. Duckett Jones. Almost simultaneously Dr. Eli C. Romberg, who was interested in chorea in children, started a special clinic in this field which he continued until about three years ago, at which time his cases were taken over by either the Rheumatic Fever Clinic or the Children's Cardiac Clinic. Gradually the care of rheumatic fever patients was relinquished by the Children's Cardiac Clinic, and its work was more and more limited to the problems of congenital heart disease. In 1940 the name of the Adolescent Cardiac Clinic was changed to the Rheumatic Fever Clinic for several reasons: 1st, to describe the principal interest of the clinic more accurately; 2nd, to remove the stigma which the name "Cardiac" implied —this was thought damaging to the morale of the patients, many of whom had no cardiac involvement; and 3rd, because neither the word "Children's" nor "Adolescent" could be considered suitable for a group of patients, many of whom had reached adult life under observation. In fact, some of them were beginning to bring their children in to be checked for possible rheumatic fever or heart disease. Finally, at the start of this year, the Children's Cardiac Clinic was combined with the Rheumatic Fever Clinic, and the consolidation of the several separate clinics, all of which had the same common interest, was completed.

Although the history of this clinic has been rather involved, its actual operation has been one of most satisfactory continuity and consistency. This has been due in part to the fact that it has been under the supervision, almost from the first, of the Cardiac Group of the hospital and of one or more members of the House of the Good Samaritan staff. The most important single coordinating factor, however, has been the presence, in all the separate clinics, from 1925 to the present time, of Miss Edith M. Terry of the Social Service Department. To most of our patients the name of their particular clinic was unimportant. To them, I am sure, it was and still is Miss Terry's Clinic.

One of the questions we must try to answer regarding any clinic is whether the time and money spent in its operation is worth while. To answer this question regarding the Rheumatic Fever Clinic we must consider both the medical and social contributions it has made.

The primary medical function of the clinic is the careful following of its patients, with every effort directed toward the prevention of recurrences of rheumatic fever. The early detection of such recurrences is most important, hence the patients are urged to come in frequently, especially after having had an upper respiratory infection. Much of our work is directed toward regulation of the activity of our patients, trying to protect them from overfatigue; but, equally important, making sure they are not being over-restricted, so that they may lead as normal lives as possible.

It is difficult to evaluate the strictly medical benefits which the patients have derived from the operation of these clinics, especially those patients who are rheumatic fever subjects. We would like to think that, through education of the patient as to the importance of the role which upper respiratory infections play in precipitating recurrences of rheumatic fever, the clinic has reduced the incidence of such recurrences. We would also like to think that the prescribing of penicillin prior to dental extractions for those with heart disease may have reduced the incidence of bacterial endocarditis. These benefits cannot be proved, but without the careful supervision of these patients it is perhaps reasonable to assume that their condition might now be worse. Certainly, we can state that these patients and their families have been so educated regarding heart disease and rheumatic fever that they understand the problem better, cooperate more satisfactorily, and thus are better able to adjust themselves to the restrictions which their disease may impose.

The clinic has contributed to the teaching program of the Cardiac Group and is used primarily for the instruction of postgraduate students in cardiology. Since the war, several Clinical Fellows have gained considerable knowledge by working in the clinic. In the research field, its principal contribution has been the facilitation of the work of Dr. Bland in his several surveys of the status of the First Thousand Patients treated at the House of the Good Samaritan for rheumatic fever, the most recent covering 15 years of observation.

It is undoubtedly in the Social Service field that this clinic has made its greatest contribution to the happiness and, therefore, the health of its patients. The nature of the disease is bound to cause disruption of the social development of the patient, and often of the family. Education is interrupted, social contacts are broken, long periods of bed rest induce boredom and depression and dissatisfaction, and finally cardiac damage may impose a serious handicap on the earning capacity of the older patient. All of these difficulties have been reduced to minimal importance by the superb work of Miss Terry and her associates. Hospitalization or foster home care is arranged. Home teaching is obtained, and even special tutoring has been provided in some cases. Contact between patients has been maintained through the monthly publication of the *In-Bed-Club Magazine*, a great morale builder. Craft work has been ably taught by Miss Loreen Love, so that not only does the time pass more rapidly and happily, but often a small income is derived from the sale of the things the patient makes. Finally, great help has been given to both young men and young women in the finding of suitable employment. For years the Cardiac Workshop has been of the greatest value, and more recently the U.S. Rehabilitation Service has contributed greatly. These are but a few of the problems the Social Service Department helps to solve, and perhaps the greatest contribution of all is the knowledge that patient or family will find Miss Terry or her associates available at the other end of the telephone or in person, with friendly help or advice to meet any type of problem which may come up.

In one respect, the Rheumatic Fever Clinic differs from all others in the hospital. Not only does it supply out-patient facilities, but it also provides home care for selected cases. This service includes regular visits by a doctor, as well as the social worker, and fills a great need in providing good medical care for those patients who are too well to require hospitalization and too ill to come to clinic.

It should be noted that there has been little change in the over-all program from that first outlined by Dr. Talbot over 35 years ago and that all his basic principles for the care of our patients still hold true. It must also be pointed out that the program of this clinic is not strictly a hospital program and that it could not have been successful without great help from other activities. The Children's Mission is constantly providing foster home care for our cases, the Visiting Nurses' Association gives invaluable service, and the Committee for the Home Care of Cardiac Children has made possible the home care part of the program. Indeed, the Rheumatic Fever Clinic can perhaps be best described as a community enterprise; and the young men and women, gainfully employed, happily married with growing families of their own, who are alumni of this clinic, are the best criteria of the success of its operation.

George P. Sturgis, M.D.,
Chief of Rheumatic Fever Clinic

* * *

One of our Pilgrims-to-Europe this summer has very kindly sent us this account of his visit.

During the past summer the International Refugee Organization, through the Unitarian Service Committee, again sent a medical and dental mission to give refresher courses to the DP physicians and dentists in the camps of Germany. While the medical mission got an early start in Munich, the dental group had to wait till the first of August to get its course under way. The dental clinic of the University of Hamburg was the location of the course, and its facilities were not available before then. The teaching staff consisted of Dr. Helmut Zander, chairman, and Dr. Hermann Seyfarth, both of Boston, Dr. William McIntosh of Toronto, Dr. Maurice Frey of New York, Dr. Rudolph Schlosser of Chicago, and Dr. Gilbert Parfitt of London. The courses taught included operative dentistry, periodontia, children's dentistry, X-ray technique, and prosthetic dentistry—Drs. Schlosser and Seyfarth teaching the last mentioned course.

Geographically, the dentists were mostly from the Baltic countries, with a few from Poland and the Balkans. A surprising factor was the large number of women in the course. It appears that in the Baltic states women outnumber men by far in the dental profession. The response of the students was most favorable. They were a most attentive and interested group. The process of repatriation of these people goes on and a number of them will eventually reach the United States. Most of them are of such high caliber that they should be assisted to retain their position in the dental profession after their arrival.

Since time and facilities were limited, teaching was by practical demonstration. Dentures were constructed and the principles and technique explained to the students. Several practical cases were carried through, with the students being able to observe every step in their construction.

During our stay in Hamburg, the teaching staff had a chance to observe the effectiveness of our Air Force during the recent war. Hamburg was one of the chief targets, and, by the end of the war, was over seventy percent destroyed. Whole sections of the city were laid level, and, except for the streets which are cleaned, the ruins are still in evidence. The center of the city suffered less and is rapidly being rebuilt. Talking with some of the residents of the city, one learns that since the currency reform, together with the Marshall Plan, new life is being infused into a shattered economy. Rebuilding is going on apace, and, while the people still look poor and are often ill clad, there is new hope in them. Food can be had if you have the money. It is very expensive to frequent German restaurants.

One amusing, and at times annoying, feature of our stay in Hamburg was the necessity of handling at least three kinds of money. Since Hamburg is in the British Zone, and the hotel where we stayed was managed by the British, we used British occupation money for the payment of our bills there. If we wanted to eat in a German restaurant or buy a souvenir, it required German marks, and if we wanted to purchase any items in the American PX, we needed American occupation money. In addition to all this, we had picked up a little money of the countries we had passed through on our way to Hamburg. The exchange and accounting of all this currency often led to all sorts of amusing situations.

Politically, Germany is a very unhappy country. The people do not enjoy being occupied, but prefer us by far to the communists. Over all hangs the dread of a possible renewal of the armed conflict and the knowledge that their country would be the battleground. Also, the German is afraid to enter politics actively. He fears that by affiliating himself with a political party he may be persecuted if a change in the political structure should arise.

The contact with the Displaced Persons and the opportunity to see Germany and the post-war effect were an interesting and stimulating experience.

Hermann B. F. Seyfarth, D.M.D.,
Assistant Dental Surgeon

The above article by Dr. Seyfarth is responsible for bringing out the story of an amusing and bewilderingly involved situation with which he became associated.

A few days ago, Dr. Richmond Holder paid us a visit at our office, and in the course of the conversation about some of his experiences in North Africa and Europe this past summer, we happened to mention Dr. Seyfarth's account of his work in Germany. At that, Dr. Holder started off on a story that was so ludicrous, and was told in such an engaging and utterly serious fashion, that we asked him to repeat it while our secretary took it down. Here it is. We think you will enjoy it.

Sitting on my desk for some years was a small yellow piece of governmental paper known as a Military Payment Order. It was a source of constant irritation to me, representing $99.98 of non-payable funds which reached me through a member of my family, from a German prisoner of war, in payment of a debt incurred in France. As a matter of policy, I attacked the red tape wound around this document with all the means at my disposal. The Treasury Department in Washington referred me to the Military Government in Germany. Military Government there referred me to the Embassy in Paris, insofar as the PW had been in that country for a period of time. The Embassy in Paris referred me back to Washington because, as they pointed out in three headings and five sub-paragraphs, the PW had originally been issued the money in the United States. This last referral kept the correspondence going with Washington for several pleasant months, from one sub-department to another; but before another shift in the House Officers at the M.G.H. had occurred, the matter was back with the Military Government again, at the Berlin Office in Germany. A new set of directives had come through stating that, according to Section 5, Article 23, paragraph 12-B, payment of the MPO could be effected to an individual or individuals other than the person to whom the order was drawn. This was all very well, but payment had to be made in marks, in Germany. As I was not in Germany and the mark had little value at that time, I let the matter drop. Some months later, the situation had changed in two respects: first, the mark had been revalued; and second, I was in Dr. H. B. F. Seyfarth's office chair while he ground out a section of my left lower six-year molar. Thinking to distract him from his work, I mumbled the story through the grinding of the drill. Not letting up for a moment, he mentioned the fact that he was going to Germany and would see his brother in Hamburg. An idea was born while the inlay was being fitted in place. Today, after some five years, three months, and twenty-two days, I am informed that his brother has received the marks, and I am about to receive the dollars, and Dr. Seyfarth is about to receive me in his dental chair for my annual check-up.

I am told that I have been found to be a Methuselah among the house staff, and for some reason this is thought to be News-worthy. The fact that I have grown old in a white suit is one that might better be left unpublished — it is all too painfully obvious when time for early morning rounds comes again each day.

However, if it must be revealed, there are several other facts worth recording at the same time:

1. It's been fun!
2. The Navy was not like this.
3. It has been well worth the time and energy spent.
4. I hope to continue these pleasant connections with the M.G.H. when my residency ends on January 1.

John W. Raker, M.D.,
Resident in Surgery

BIOGLET

Dr. Lee M. Cecil, Intern in Medicine — born in Duluth, Minnesota, September 4, 1925; B.S., University of Michigan, 1946; U. S. Navy: Great Lakes, Illinois; M.D., University of Michigan, 1949.

ENGLISH AUTUMN

Autumn — Time of reds and russets
Olive green changing to yellow in the trees,

The woods of autumn with their haunting colours,
Sparkle of scarlet berries in the hedgerows,
Long shadows in the clear red sun.

Morning — Spiders' webs crusted with frosty dew,
Jewelled radiance of the long night's toil
Beyond contriving of the patient spinners
Whose shining nets hang all too visible for prey.

Afternoon — Wave-beaten sand gleams wetly
From the retreating tide: across the magic sea
Two swans fly, necks long reaching, wings
Wave beating the quiet air above the water.

Evening — The cattle steaming in the fields
Knee-deep in mist: spiders at work again;
swans gone into the distant dusk.
And all the colours breathing in the darkness.
Autumn — time of reckoning and remembering
Autumn — wisest and loveliest changing of the year.

D. S. C.

December Calendar

Wednesday, the 14th, at 8 P.M. Distaff Christmas meeting at the home of Mrs. Edward Leffler, in Waban. Can you help with transportation? Can you make a dozen cookies for the party? Phone Dorothy Nielsen, CA 7-2993.

Tuesday, the 20th, at 2:30. Hospital Christmas party for ward patients. Your help in moving patients from the wards to the party and back would be appreciated. And you yourself will enjoy the party. If you are free to help, phone Jane Roe, RI 2-2287.

Christmas Day Dinner. The Christmas dinner last year was a memorable event for the single and married doctors on duty, and their families. Dinner was served at 2 in the gayly-decorated doctors' dining room, with the help of one of the hospital employees and several of the doctors and their wives. Nuts, home-made cookies, and candy were arranged on a side table. We are going to repeat this merry experience this year — so that by next year it will be an established tradition! We will need help in making posters, decorations, cookies, and candy. If your husband is going to be on duty Christmas Day, and you would enjoy helping in some way with this preparation for the dinner, please phone Alice Stoeckle, RI 2-0555 — right away!

The September meeting of the Distaff Club was held in the home of Enis Martin, whose husband, Jim, is on the X-ray Service. We were especially pleased to have with us Evelyn Garrity, whose husband is on the Neurosurgical Service, and Dorothy O'Brien, whose husband is in X-ray, who had made the long drives from South Weymouth and North Scituate to attend the meeting. It is quite an inconvenience, and often an impossibility, for the wives living outside of Boston to come in to an evening meeting, and we certainly are happy when they can give us the opportunity to become acquainted with them. Though they may be able to attend only a few meetings a year, they are warmly welcome.

The October picnic at Waverly Oaks, planned by Jean Stanbury, whose husband John is in Medicine, and her committee, seemed to be much enjoyed by the 39 adults and innumerable children present. The baseball game, in which wives took their stand with or against their husbands on the field, revealed unexpected agility and hard-hitting on the parts of some of the players. (Several "Red Soxes" confessed the following day to a slight stiffness and soreness about the joints.)

Mrs. C. Nichols Greene, donor of one of the scholarships at the Harvard Medical School, and sister-in-law of the late Dr. Richard P. Strong, tropical medicine expert, graciously invited us to her Beacon Hill home for our November meeting. Gathered round the great fireplace in the dimly lighted music room, we enjoyed a violin selection by Jean Stanbury, accompanied on the piano by Barbara Leaf, whose husband Alex, formerly on the Medical house staff, has just returned to the M.G.H. as a Fellow under Dr. Albright. We stayed long into the night.

Brief bits:—

An article entitled "Medical progress, Endoscopy", by Dr. Edward B. Benedict, Endoscopist at M.G.H., appeared in the *New England Journal of Medicine,* 241:152-154, July 28, 1949.

Dr. Earle M. Chapman, Associate Physician on our staff, gave an address before the Medical College of the State of South Carolina, at their Annual Alumni Postgraduate Seminar, on November 3. His subject was "Thyroid diseases".

The last sentence in the article which Dr. Donald S. King prepared for last month's issue had to be clipped off in order to solve the difficult monthly problem of making space available and material on hand come out even — down to one-tenth of an inch, actual measurement. To dispel any possible impression that these various missions on which members of our staff are sent are just *"veni, vidi, vici"* and "that's the end of that" sort of affairs, we give you now that final sentence from Dr. King's article: "I find that since returning I have written sixty-five letters to and about people I met on the trip, so the end is not yet."

Dr. Joe V. Meigs's department had a busy month of October. A Postgraduate Course in Gynecology was held, October 10 through 22, with forty-one members from various parts of the U. S. attending. A dinner was given at the Harvard Club on October 21 for the students and others who had participated in the course.

Dr. Leonard D. Rosenman (*ES* 1943) has announced the opening of his office at 450 Sutter St., San Francisco, California, for the practice of surgery.

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. V. Everett Kinsey of the Howe Laboratory has been given a two-year grant by the Atomic Energy Commission, to investigate the effect of neutrons and other radiations on the ocular lens. Assisting Dr. Kinsey in this work will be Dr. Frederic C. Merriam and Mrs. Ethel Bowie, both of the Howe Laboratory, and a physicist to be appointed.

The program is a joint one, to be carried out by both Harvard University, through the Howe Laboratory, and the Massachusetts Institute of Technology, where Professor Robley Evans will supervise the physical aspects of the work.

The study arose out of the desire to determine the mechanism and dosage relationships of cataracts resulting in workers exposed to neutrons from cyclotrons. It is planned to investigate the broader aspects of lens opacification by studying protein synthesis in organ cultures of lenses through the usual radioactive techniques.

Dr. Jonas Friedenwald of the Wilmer Institute of Ophthalmology at Johns Hopkins Medical School will visit the Howe Laboratory December 9. Dr. Friedenwald and Dr. V. Everett Kinsey are conducting a joint study on the effect of adrenalectomy on the rate of flow of aqueous humor and the formation of intra-ocular fluids.

Dr. David G. Cogan of the Howe Laboratory and Dr. S. Forrest Martin, Assistant Surgeon in Ophthalmology, have completed their survey of individuals who were exposed to the atomic bomb in Nagasaki and Hiroshima. They returned home last month.

At the October meeting of the American Academy of Ophthalmology and Otolaryngology, held in Chicago, Dr. Edwin B. Dunphy was elected First Vice-President for 1950.

Dr. Edwin B. Dunphy gave a paper before the American College of Physicians on November 17 at the M.G.H. The subject was "Eye ground examinations with special reference to hypertension".

The first dinner meeting of the New England Ophthalmological Society to be held at the Infirmary will be on December 21. Dr. Algernon Reece of New York City and Dr. Dewey Katz of Hartford, Connecticut, will be the guest speakers, and Dr. Frederick H. Verhoeff, Consulting Chief in Ophthalmology at the Infirmary, will lecture in the afternoon session.

No. 20 in a series of Staff photographs
Dr. Laurence L. Robbins — Chief of Radiology

New addresses:—

Dr. Peter T. Brooks (*ES* 1943), 26 South Roosevelt Ave., Walla Walla, Wash.
Dr. James H. Currens (*a. M*), 1101 Beacon St., Brookline 46, Mass.
Dr. Charles H. Endee (*a. dn. s.*), 6 Marlboro St., Boston 16, Mass.
Dr. Wyland F. Leadbetter (*assoc. v. u.*), New England Center Hospital, 30 Bennet St., Boston, Mass.
Dr. Janet W. McArthur (*a.r.p.* 1944), 1 Primus Ave., Boston, Mass.
Dr. Harley C. Shands (*a. in Psychi.*), 36 Arlington St., Cambridge 40, Mass.

In response to the questionnaire which we send each month to the offices of our Chiefs of Services and Heads of Clinics, Dr. Henry R. Viets, Neurologist and Chief of the Myasthenia Gravis Clinic at M.G.H., has given us the following information regarding himself and his department:

Publications, 1948 — titles of 14 articles. The list is posted on the bulletin board near the foot of Treadwell stairs. Copies of the list will be mailed upon request to those who are not able to see it here in the hospital.

Publications, 1949

*Myasthenia Gravis — *Current Therapy,* pp. 516-518, 1949

*Cholinesterase inhibitors in treatment of Myasthenia Gravis — *J.A.M.A.* (Editorial) 139: 788-789 (March 19) 1949

Thymectomy in Myasthenia Gravis — (in press)

*Reprints

Activities within the hospital — The Myasthenia Gravis Clinic was continued during the year, meeting twice a month in the Out-Patient Department, with an average of eight to ten patients at each session. This is a follow-up clinic. Some of the patients have been under observation for as long as fifteen years. They include 36 patients who have had thymectomy, the first one in December 1941. A report on this group of patients was presented to the Fourth International Neurological Congress in Paris in September, and in addition, a statistical survey of the entire group of patients seen in the hospital or in private practice by Dr. Robert S. Schwab and myself, now numbering about 300 since 1935.

Activities outside the hospital — I attended the meeting of the Medical and Biological Abstract Conference, representing the American Medical Association, in June. The meeting was held at the headquarters of UNESCO in Paris. A report of this session was published in the *J.A.M.A.* for July 23, 1949, page 1034. Subsequently, I visited England and made some observations on the National Health Act.

In August, I again visited Europe to attend the Fourth International Neurological Congress and read the papers mentioned above. I then visited some clinics in Switzerland and went again to England where conferences were held on myasthenia gravis in London and Oxford. Some observations were made on the progress of medical care under the socialized scheme in Great Britain.

Since returning home, the program has been completed for the Clinical Session of the American Medical Association, to be held in Washington this December, and plans have been inaugurated for the Annual Meeting of the American Medical Association, to be held in San Francisco in June 1950 — the responsibility for the Scientific Session being under the Council on Scientific Assembly, of which I am Chairman.

Miscellaneous — Other activities include the annual meeting of the National Foundation for Infantile Paralysis as a member of the Medical Advisory Committee, and the annual meeting of the Honorary Consultants to the Army Medical Library as Chairman of the Committee on the History of Medicine.

This very nice letter has come from Dr. William N. Mundy, III (*M* 1944).

I am sorry I was unable to see you when I was in Boston the first part of October. However, that was to be, so I shall try to make up for it by bringing you up to date a little bit on myself.

This is the first time I have written The News since I left the M.G.H. in the fall of 1944, at which time I went to St. Louis as a metabolic fellow in Washington University Medical School, to work in the metabolic division at Barnes Hospital. I was there for fifteen months, under C. M. McBryde, Chief of the Metabolic Service, and professionally I had a good time. We had a well-equipped laboratory and did some work on insulin modifications, which have been further worked out since my departure and which probably will be released on the market soon. My stay in St. Louis was happily punctuated by the birth of our first daughter, Janet Ann, in June of 1945.

On January 1, 1946, I came to Toledo, where I undertook the practice of Internal Medicine in partnership with my father, another Internist, and where I have been ever since. My medical activities here are quite extensive. I am actively engaged in a teaching capacity in two of the large hospitals, where we have recognized residencies in medicine and other branches of the science. In addition, I have been quite active in planning postgraduate and regular scientific programs for the local Academy of Medicine.

We have been active with the usual social affairs and have managed to work out three or four weeks of vacation each year, a large part of which has been spent on Cape Cod. I fell deeply in love with that area while I was in medical school training in Boston. Spending vacations there has the added advantage of making it easy to get back to the old M.G.H. every year, to renew old friendships and acquaintances, and to allow a periodic reinoculation with the mysterious serums which emanate from that ivy-clad tower and reinvigorate intellectual curiosity

We have had a couple more additions to the family. In February 1947 a second little girl, Nancy Elizabeth, was born, and in July of this year, a little boy, Nicholas Corbett. Having broken down the run of girls, this will perhaps be our last venture in parenthood.

Perhaps some of the readers of The News should be reminded that my wife is an M.G.H. graduate, who was known there most of the time as Virginia Hussey. However, she continued to practise nursing under my name for some time after we were married, as head nurse on White 7. She has carefully kept up all her nursing affiliations, though she has been too busy with the children to do any active nursing since we left Boston.

We extend our kindest regards to all our many friends who will see this in the ever-interesting, nostalgia-producing News.

THE NEWS

No. 86 Boston, Mass. January 1950

UROLOGICAL SERVICE AFFAIRS

Activities of the Urological Service are in three parts: the care of patients, teaching, and research work. The staff is composed of four associate visiting urologists, five assistants in Urology, and the chief of the service. The house staff is made up of a resident and two assistant residents. An intern and assistant resident from the Surgical Service rotate through the Urological Service, taking an active part in the work of the ward and the Out-Patient Department. The teaching program is shared by the visiting staff. Research work has been clinical and investigative, the two chief problems being cancer and urinary calculi.

The fundamental purpose of the Urological Service is to take care of patients. This service is rendered in different parts of the hospital: the ward, Out-Patient Department, Emergency Ward, Tumor Clinic, Phillips House, and Baker Memorial. Admissions to the ward form the basis of the active work of the Service, but this must be supported and nourished by the Out-Patient Department. During 1948, there were 450 admissions to the Urological ward. For the first eleven months of 1949, there have been 476 admissions. In the Out-Patient Department during 1948, a total of 4286 patients were seen in 6035 visits. In the year 1948, on the ward service, 441 operations were performed, with a total postoperative mortality of 3.8 percent. One hundred sixty-eight of these operations on our ward service were for prostatic obstruction, with only six postoperative deaths—a mortality of 3.5 percent. During this period, ten radical perineal prostatectomies for early carcinoma of the prostate were performed, with no mortality.

After the care of patients, the most important function a service such as ours should perform is one of education. In addition to student teaching, we have to consider the teaching of our own resident staff. During his three-year tenure on the Urological Service at the Massachusetts General Hospital, how adequate a preparation has the departing resident received? In the first place and of fundamental importance, it is our feeling that two years of general surgical training is a necessary requirement before a young man should seek training in one of the surgical specialties. Otherwise, the cart is put before the horse. A five-year program seems long—two years of general surgery and three of Urology—but in most instances less than this is inadequate. Can we, at the Massachusetts General Hospital, provide adequate training for our residents? At the risk of a too statistical communication, it is well to explore this further.

The period of training on the Urological Service at the Massachusetts General Hospital is three years. With his adequate surgical background, the second assistant resident spends his first year in the Out-Patient Department and on the ward. He learns a routine of history taking, physical examination, cystoscopic and X-ray diagnosis, and assists in operations. During his second year, as first assistant resident, his time is devoted to the care of private and semi-private patients in the Phillips House and Baker Memorial. He takes the history, does a physical examination, assists at operations, and helps in postoperative care. During this year, he devotes part of his time to the Emergency Ward and ward service and does some of the ward operating. As assistant to eight or ten qualified urologists in their private work, he learns a variety of techniques from which he may develop his own. During his year as resident, the trainee is directly responsible for the ward service. With a good foundation in general surgery and two years of specialized training, he is well equipped to take over. The ward service is the resident's direct responsibility, under the guidance of the visiting staff.

At the end of his three years of experience on the Urological Service, how broad has been the graduate's training? The resident has taken part in all of the activities of the service. During the year 1948, there were eight hundred fifty-six urological operations performed at the Massachusetts General Hospital. These do not include cystoscopic examinations. Four hundred forty-one of these operations were on the ward service, four hundred fifteen were on Phillips House and Baker Memorial patients. Ninety-four percent of the ward operations were performed by the resident staff. That the resident staff performs and takes part in major surgery is shown by the fact that of the total eight hundred fifty-six urological operations performed during 1948 in all departments of the hospital, three hundred seventy-four were operations on the prostate, thirty-eight were nephrectomies (nine thoracoabdominal), there were nineteen total cystectomies with transplantations of the ureters to the sigmoid, and nineteen radical perineal prostatectomies for early carcinoma. For the first eleven months of 1949, there have been four hundred seventy-five operations on the ward service, with nineteen deaths—an over-all operative mortality of four percent. During this period, there were six total cystectomies for carcinoma of the bladder, twelve radical perineal prostatectomies for cancer of the prostate, and nine thoracoabdominal nephrectomies on our ward service.

To provide a broad training for residents in Urology, experience should be gained in not one but all of the methods of treating surgical lesions. With his training under several different experienced urologists, our residents receive such experience. An example is the surgery of the prostate as practised at this hospital. Of a total of three hundred seventy-four prostate operations during 1948, fifty-seven percent were transurethral resections, twenty-eight percent perineal prostatectomies, twelve percent were suprapubic prostatectomies, and three percent were retropubic prostatectomies. Thus, the resident staff were given experience in all of the standard methods of removing a prostate. Emphasis is put upon the type of operation best suited to the individual patient. The very valuable contributions which the interns and assistant residents from the general Surgical Service make to our service during their period with us we try to repay by teaching them the essentials of Urology. Upon finishing his training on the Urological Service the resident should be qualified to practise Urology anywhere.

The Urological Service continues its interest in the treatment of malignant disease. Through the efforts of Dr. Lamar Soutter and Dr. Richard Chute and Dr. Walter S. Kerr, Jr., the thoracoabdominal removal of renal neoplasms is becoming a recognized procedure. The development of better surgical technique to aid in the cure of cancer of the bladder and early cancer of the prostate is being studied by Dr. Kerr, with careful studies of the pathology of both conditions under a grant from the American Cancer Society. Dr. Kerr finished his residency in July 1949 and continues as a member of the Urological Staff. Problems in plastic surgery not infrequently confront the urologist. Dr. Bradford Cannon kindly consented to help in these problems, particularly in the surgery of hypospadias in collaboration with Dr. Richard Chute. Dr. Cannon's contributions already have been considerable in applying the principles of plastic surgery to lesions of the external genitalia. Compared with the indifferent results achieved by us alone in the past, Dr. Cannon's results have been spectacular. Studies on the chemical dissolution of urinary calculi are being continued by Dr. Howard I. Suby.

With four hundred fifty and five hundred yearly admissions to the Urological ward and four hundred fifty or more operations and an over-all mortality of four percent or less, the care of patients seems to be adequate. With a total of over eight hundred fifty urological operations at the Massachusetts General Hospital, the material for teaching should be ample. Since each resident performs approximately four hundred operations under the advice and direction of several visiting surgeons, the resident's experience is sufficient and varied. It is expected that the Urological Service will continue to do progressive work.

Fletcher H. Colby, M.D.,
Chief of Service

* * *

At ten o'clock on the morning of December nine, a simple but very impressive ceremony took place in the hospital. At that time our Board of Trustees, members of the visiting and house staffs, nurses who had served with the MGH unit overseas in the last war, members of the non-professional staff, and others, assembled in Treadwell Library to pay special tribute to the six members of our staff and alumni who gave their lives in World War II. Invitations to attend had been sent to the immediate families of the men who were to be honored.

After a few brief remarks concerning the significance of the occasion, Mr. Francis C. Gray, Chairman of the Board of Trustees, introduced Dr. Horatio Rogers, Visiting Surgeon on our staff, who had been chosen to represent, and speak for, the hospital. For those who were unable to be present, and for those who may wish to preserve Dr. Rogers's words and the records of those who died in the war, we give them to you here.

> It is, I suppose, a nearly universal custom of families to treasure photographs of their children, and the Massachusetts General Hospital family is no exception.
>
> For many generations this proud old mother has been jealously rearing her medical brood. She has petted and punished them according to their needs, endowed them with her own wise spirit, and finally sent them out over the world with the stamp of her training on them. Always she expected them to give their best, and she has seldom been disappointed.
>
> We are here this morning to take note of the placing of six photographs on the walls of Treadwell Library. Being a family matter the occasion is informal, but for that very reason its meaning goes extremely deep.
>
> And its importance will by no means lessen when we have left this room. Future generations of students and staff, using the library as their predecessors have so often done before them, will not fail to draw strength and personal inspiration from this impressive record of unselfish duty well and truly done.

Sidney Chase Graves, Lt. Comdr., M.C., U.S. Naval Reserve

Born in London, England, July 21, 1901
East Surgical House Officer, 1929-31
Serving aboard the *U.S.S. Iowa* in the Pacific Area on May 14, 1944, he lost his life in line of duty.

Robert Satterlee Hurlbut, Lt. Sr. Grd., M.C., U.S. Naval Reserve

Born January 1, 1912
East Surgical House Officer, 1938-39
Assistant Resident, 1940-42
Serving aboard the *U.S.S. Halligan* off the coast of Okinawa on March 26, 1945, his ship was destroyed by enemy action.

Meinolph Valen Kappius, Comdr., M.C., U.S. Naval Reserve

Born in Nebraska, 1899
Assistant Obstetrician, 1932-45
Serving as Flight Surgeon aboard the U. S. Aircraft Carrier *Kadashon Bay* in the Admiralty Islands on January 24, 1945, his plane failed to return from a routine flying mission.

Theodore Parks Robie, Capt., M.C., A. U.S.

Born at Copper Cliff, Ontario, August 15, 1917
East Surgical House Officer, 1942-43
Awarded the Silver Star decoration on September 12, 1944 for gallantry in action while serving with the 35th Infantry Division of General Patton's Third Army at the crossing of the Moselle River. Captain Robie, with a litter squad, made many trips across the river in the face of heavy enemy fire, wading in deep water and holding the litters above his head to evacuate wounded from the strongly held east bank. The citation reads in part: "His gallantry in action, his personal courage, disregard for his own safety, and devotion to duty reflect credit upon him as an officer and upon the Medical Corps of the Army.
Captain Robie was serving with the 2nd Battalion of the 137th Infantry at Cereueil, France, on September 19, 1944, when he was killed by the explosion of an enemy land mine.

Frederick James Cunningham Smith, Capt., M.C., A.U.S.

Born in 1907
Neurosurgical House Officer, 1932
East Surgical House Officer, 1935
Serving in the Australian Theatre of Operations on September 9, 1942, he was killed in action.

Edward Lorraine Young, III, Capt., M.C., A.U.S.

Born in Jamaica Plain, Mass., June 24, 1914
West Surgical House Officer, 1942
Serving with General Patton's Third Army as one of a surgical team of the 4th Auxiliary Surgical Group on March 24, 1945, he volunteered to accompany the paratroops over the Rhine to establish a forward casualty station on the enemy side of the river, and was killed by enemy action immediately on landing, together with all but one of his surgical team.

The ceremony closed with a moment of silent prayer.

Dr. and Mrs. Faxon sailed for Europe on December 28. They will spend a month in Paris, where Dr. Faxon, at the request of the Board of Directors of the American Hospital in Paris, is to make a survey of the hospital. Before returning home, they will visit Belgium, Holland, Denmark, England, Scotland, and Sweden.

We have lost Miss Marion D. Floyd, our Chief Dietitian.

Miss Floyd has directed our Dietary Department during its growing years, from an organization of 60 employees and 2 dietitians to its present size—a personnel of 300, including 20 staff dietitians and 22 dietetic interns.

Miss Floyd's resignation was accepted with sincere regrets last October, and on January 1 she took over her new duties as Chief of the Dietetic Branch of the Division of Hospitals, which functions under the U.S. Public Health Service. Her office will be in Washington, D.C.

Miss Floyd's new position carries with it the commission of Senior Dietitian in the Reserve Corps of Public Health Service officers—a rank comparable with that of Lieutenant Colonel in the Army. She will supervise the nutritional care of patients, over-all food services, and dietetic administration activities in the 24 Public Health Service Hospitals. It is an enormous job, but we know Miss Floyd is good for it.

Miss Louise Hatch has become Acting Director of the Dietary Department.

Rev. Rollin J. Fairbanks has resigned as Protestant Chaplain to the Massachusetts General Hospital. His resignation, effective December 31, was made in order that he might devote more time to teaching and writing. He has been succeeded by Chaplain James H. Burns, who has been associated with him for the past three years.

MISSING

HOSPITAL PATIENTS' REGISTER
Vol. 2, 1826-1837

containing serial numbers, names, and other registration data of patients admitted to M.G.H. during those years. The book is leather-covered, measures about 15 by 13 inches, and is 1 inch thick.

If you have any ideas as to the present location of the volume, please communicate them to Miss E. Louise Seymour, Record Librarian, at once.

At the 2nd International Electroencephalographic Congress in Paris, September 1-3, 1949, a permanent International Electroencephalographic Federation was formed. The Honorary President elected was Professor E. D. Adrian of Cambridge, England. The officers are: President—Herbert Jasper of Montreal; Vice-Presidents—W. Gray Walter of Bristol, England, Fritz Buchtal of Copenhagen, Denmark, Robert S. Schwab of Boston; Secretary—Henri Gastaut of Marseille; Treasurer—Anthony Remond of Paris.

This Federation will be incorporated in France and affiliated with UNESCO. The journal *Electroencephalography and clinical neurophysiology* will be the official organ of the Federation. Future International Congresses in this field will be held under the direction of the Federation. The 3rd EEG Congress may be held in Boston in 1952.

* * *

The annual MGH postgraduate course in "The treatment of fractures and other traumatic conditions" was given at the hospital from October 24 through November 3. This was the 15th time the course has been offered since its beginning in 1928, under the auspices of the Harvard Medical School. During that time, a total of 1,237 students, representing every State and eleven foreign countries, have taken the course. This year there were 70 physicians and surgeons from 29

States, Canada, Mexico, and the Philippines. Whereas, prior to the war, the course dealt with fractures only, now the management of other traumatic conditions is also included,. and the course is presented by a total of 40 instructors from the various services and clinics of the hospital.

In 1950, the course will be given from October 30 through November 4—the week following the Boston meeting of the American College of Surgeons.

The Board of Trustees, at their meeting on November 10, voted:

To reinstate Dr. William P. J. Peete as Third Assistant Resident in Surgery, as of November 1, 1949;

To appoint Dr. Boris Senior as Intern on the Children's Medical Service, as of November 3, replacing Dr. Leslie Corsa who has resigned because of illness.

To appoint the following Assistant Residents and Interns on the Children's Medical Service for the term July 1, 1950 through June 30, 1951:

Doris R. Bennett—Intern
Stanley Berlow—Intern
LeRoy L. Eldredge, Jr.—Asst. Resident
John F. Hogan, Jr.—Asst. Resident
Gerald A. Kerrigan—Asst. Resident
John B. Reardan—Intern
Robert T. Sceery—Intern
Iwao Uyeda—Asst. Resident

At their meetings on October 19, during November, and on December 7, the General Executive Committee voted to appoint:

Dr. Robert F. Bales as Research Fellow in Psychology, as of September 1, 1949;

Dr. John W. Irwin as Research Fellow in Medicine, assigned to Allergy, to work with Dr. Melvin H. Knisely in Charleston, South Carolina, as of October 1, 1949;

Dr. Clarence J. Kasales as Clinical Fellow on the Children's Medical Service, as of October 15, 1949;

Dr. Chi H. Lee as Clinical Fellow on the Children's Medical Service, as of October 15, 1949;

Dr. Wilfred Leith as Clinical and Research Fellow in Medicine, assigned to Allergy, as of January 1;

Dr. Jarvis D. Paschal as Clinical Fellow on the Children's Medical Service, as of October 15, 1949;

Dr. Agustin L. Roque, who has been serving as Graduate Student Assistant in Pathology, as Research Fellow in Pathology for one year, beginning December 5, 1949;

Dr. John D. Wade as Clinical and Research Fellow in Surgery.

* * *

We go to press before the Christmas celebrations at the hospital get under way. However, the list of events, as given on the attractive program folder—prepared, as usual, in the O.T. Department—indicates a full week of festivities.

But it is not the events alone that make "Christmas at M.G.H." what it always is. You who have been at the hospital during a holiday season will know what we mean when we say that to us the unbroken chain of parties for old and young, instrumental music and carols, colored lights and evergreen sprays, seem to be strung on tendrils of good will and warm greetings. And whether you participate in the program, or witness the various activities as a member of the hospital family or as a bed-ridden patient, the remembrance of Christmas week at M.G.H. will remain with you always.

* * *

SOUTH MEDICAL CLINIC

It is an interesting fact that of the first three medical patients admitted to the Massachusetts General Hospital in 1821, two had secondary syphilis. Almost a century was to pass, however, before a Syphilis Department (Skin L) was established in 1913, with Dr. C. Morton Smith as Chief. In 1935, the name was changed to South Medical.

At present, clinic sessions are held in the Out-Patient Department on Monday, Tuesday, Wednesday, and Thursday afternoons, Saturday mornings, and Thursday evenings. Patients are admitted from other clinics and wards of the Massachusetts General Hospital, the Eye and Ear Infirmary, and Vincent Memorial, as well as from various outside agencies and private physicians. The latter have the privilege of referring patients for consultation to South Medical, which functions as a cooperating clinic under the Division of Venereal Diseases of the Massachusetts Department of Health. All patients admitted to the clinics and wards of the Massachusetts General Hospital are now screened by serological test for syphilis, and those who have positive or doubtful tests are referred for evaluation.

The South Medical Clinic possesses adequate facilities for the diagnosis of infectious lesions, including dark-field examination for Treponema. Serological tests for syphilis are not performed by the hospital, but are sent to the State and City laboratories. The former, at our request, performs quantitative serological tests, which are of great aid in following the progress of therapy.

In the admission and examination of patients, every effort is made to provide privacy by the use of individual consulting rooms. Furthermore, the cooperation and confidence of the patient who has been diagnosed is secured through the medium of a clinic executive, Miss Anna Ellis, who acts as a liaison between the patient, physician, social agencies, and the Division of Venereal Diseases of the Massachusetts Department of Health. One of Miss Ellis's functions is the interviewing of patients for contact investigation and follow-up, Social Service referring, and the reporting of diagnosed cases to the State Department. Miss Ellis is also in charge of a secretarial staff which maintains a card follow-up system, and codes cases in a diagnostic file.

The clinic is extremely fortunate in numbering among its medical staff Drs. Madelaine R. Brown, neurologist, James H. Currens, cardiologist, and Dwight L. Siscoe, internist, who function as a consulting unit within the group. Without their help, the referral of patients would be very unwieldy.

A close relationship exists with the dermatological ward, to which cases are admitted for special therapeutic problems, including malaria.

Research problems have, until recently, been of a clinical nature; but Dr. Chester N. Frazier, Wigglesworth Professor of Dermatology at Harvard Medical School and Chief of the Dermatological Service at Massachusetts General Hospital, is conducting experiments in his laboratory which include metabolic, serological, and tissue studies, carried out on rabbits which have been inoculated with Treponema pallidum. We are extremely fortunate, also, in being able to call upon his broad clinical experience, obtained over a period of years in the Orient where many unusual forms of syphilis were observed. Dr. Frazier is the author of the book entitled *Racial variations in immunity to syphilis*. The co-author is H. C. Li, M.D. This book was published in 1948 by the University of Chicago Press.

Projected research includes studies on the immobilization of the Treponema, which will help in the differentiation of false positive serology and will be of great practical help to the clinician.

With the discovery of the effect of penicillin on Treponema by Mahoney in 1943, and its application to syphilis in the human, the status of syphilis has been changing rapidly. Whereas, formerly, patients required weekly treatments of heavy metals for periods ranging from 15 months to 3 years, almost our entire syphilis population at present is being treated by courses of penicillin ranging from a total of 7½ to 20 days. This, together with the fact that penicillin is also available to the general practitioner, and its administration not hampered by serious side effects, our clinic load has dropped from 80 patients a day, during the war, to an average of 15 patients a day. It is not too difficult to project the eventual extinction of this disease. Another trend that might be noted clinically is that during the first ten months of this year, 4 cases of early infectious syphilis were treated in the clinic, whereas, formerly, the clinic load was 30 to 50 patients a year. Treatment, it might be added, is carried out in one room, set aside for the purpose, under the direction of a nurse-technician.

William R. Hill, M.D.,
Chief of South Medical Clinic

DERMATOLOGY DEPARTMENT

Recent visitors in the Dermatology Department include Dr. Stefania Jablonska of Warsaw, Poland, who is visiting this country under the auspices of the World Health Organization; and Dr. Sven Hellerstrom, Professor of Dermatology, Karolinska Institute, Stockholm, Sweden.

Dr. Alexander Gedeon Matoltsy, who was appointed a Research Fellow in Dermatology, effective October 1, also has an appointment as Research Associate in Dermatology at the Harvard Medical School. Dr. Matoltsy came here from the Marine Biological Laboratory at Woods Hole, Massachusetts, where he has been working on problems of muscle metabolism with Dr. A. Szent-Gyorgyi. Prior to that he was in the Department of Experimental Histology, Karolinska Institute, Stockholm, Sweden, the Hungarian Biological Research Institute, Tihany, Hungary, and the Institute of Histology and Embryology, University of Budapest, Budapest, Hungary.

Dr. Stanley Cobb, Chief of our Psychiatry Service, has very kindly sent us this abstract of the three Thomas William Salmon Lectures which he gave in November at the New York Academy of Medicine.

EMOTIONS AND CLINICAL MEDICINE

The term "emotion" refers to something complex; it designates a multidimensional referent with three main parts: (1) The private feeling or effect that is felt by each person but must be interpreted to others by symbols. (2) The complex set of physiological changes set up in nerves, viscera, glands, and muscles. This is a stirred up internal state. (3) The patterns of behavior which overtly express the stirred up internal state, and back of that, the feeling. Since the overt expression changes the environment to some degree, there is a feed-back to the sense organs of the organism and thence to the feeling and disturbed internal state. Such a definition allows us to go ahead and discuss intelligently the pertinent data.

The first lecture was largely taken up with an exposition of the anatomy and physiology of the cerebral cortex and its phylogenetic development in the mammalian series. Emphasis was put on the work of Papez, Brodal, Yakovlev, Fulton, and MacLean which indicates that the archipallium and mesopallium are not, as is usually taught, the "rhinencephalon", but the visceral brain. The hippocampus is not an olfactory organ, but a special sort of cortex that integrates visceral and other somatic afferents with smell and taste. There is evidence that this area discharges into the hypothalamus, thence to thalamus, cingulum, and neocortex, and gives a background for emotional feeling and expression. Closely related are the sympathetic discharges of the hypothalamus to midbrain, hindbrain, and spinal cord. And most important is the hypothalamic control over the pituitary. Lesions in man were discussed; these rarely cause emotional outbursts, but in the few cases known that had localizable lesions, the locus was in the hypothalamus and archipallium.

In the second lecture Bard's work on sham-rage was described, with mention of other experimenters, leading up to the more recent experiments in which Bard and his colleagues have been able to produce profoundly placid cats by removal of neocortex, and turn these into ferocious animals by adding later a lesion in the archicortex. The first observations of excessive oral reactions in cats were described. Next, the experimental work on monkeys by Kluver and Bucy, Wilbur Smith, Bard and Fulton's group was taken up. No operation on a monkey produces sham-rage, but they show as a result of lesions in the archicortex and mesocortex, especially the amygdalar region, passivity, fearlessness, exaggerated affectionate behavior, marked oral reactions, and excessive sex expression. Lesions in man have never produced a good picture of sham-rage. A movie taken by Dr. Bojar was shown as an example of partial rage reaction. The difference in reaction between carnivora (cats and dogs) and primates was explained as a species difference. The carnivora have need for a rage reaction in their lonely hunting; they must kill to eat, whereas for a monkey rage at the time of his gregarious meal would be disorganizing.

In the third lecture anorexia nervosa was discussed as an example of a psychosomatic disorder in which emotion played a large part. Endocrine, nutritional, and gastrointestinal factors are, however, equally important. The syndrome is confined to women, and four out of the sixteen cases reported had died. It is, therefore, no simple neurosis, but a severe psychosomatic disorder of young women. Patterns of personality were discussed, and it was held that the method of making "psychological profiles" of persons with different diseases was perhaps allowable as a preliminary survey method, but faulty and overdone. More important was the question of why one person breaks down under stress with asthma, another with colitis, and a third with eczema —the question of the "choice of the organ". Wolff's theory of complex protective reaction patterns was upheld as a more satisfactory explanation than the old theory of "organ inferiority", although extraordinary bodily phenomena of any sort can be used as neurotic scapegoats. Social precipitating factors as studied by Lindemann were described.

* * *

In the November issue of THE NEWS we published an article which had appeared in a London newspaper, concerning Sir Richard Fairey's prompt action in aiding Mr. Lewis Douglas, our Embassador to England, at the time he suffered the accident to his eye. The article was titled "A debt repaid", and touched upon Sir Richard's appreciation of the services he received as a patient at the Massachusetts General Hospital.

We had made a mental note to procure the details regarding Sir Richard's case, to give to you; but before we could go forward with the idea, Dr. Paul D. White sent us this letter, which contains much more information than we could possibly have obtained.

> One of the most important individuals in the defense of Britain during World War II, and I think probably next to Winston Churchill himself the person most responsible for holding the fort before we ourselves were ready to fight, was Sir Richard Fairey. An early and daring pioneer in the field of aviation, both in flying himself and particularly in airplane construction, Sir Richard has continued to be a leader in this field ever since, and is still one of the world's most important makers of airplanes.
>
> At the beginning of the battle of Britain he served day and night in getting planes into the air against the Nazi hordes, following which he became the British Air Commissioner to the U.S.A. and was for several years in Washington. Through this official position he was able to reinforce the R.A.F., to give us valuable advice, and to cement friendly relations with our most important ally in World War II. Those years of overwork took their toll, however, and when I saw Sir Richard in Bermuda, where he was in retirement because of illness in March 1945, I found him a very sick man. It seemed to me then that if anyone deserved to be helped and to be given every opportunity to recover, in recognition of his great service to this country and to the world at large, it was he.
>
> Sir Richard entered the Phillips House as a patient that same year—1945. Dr. Reginald H. Smithwick carried out for him his lumbodorsal sympathectomy, and during the following year Sir Richard showed a remarkable recovery, with satisfactory control of his blood pressure. He has been in surprisingly good health since. He represents one of a considerable number of successful cases of my own who were so treated by Dr. Smithwick while he was an active member of our staff. I am very grateful to Dr. Smithwick for his invaluable aid in thus helping us to repay a little of our debt to Richard Fairey.

A pall has descended upon the old M.G.H. since last summer, and the Moseley Flats have assumed the quiet that follows a thunderstorm; surgical grand rounds have been reduced to a serious occasion, and the wards are once again devoted to patient care. The reason for this remarkable change was the regrettable departure of a character long to be remembered among the gallant ranks of "men in white".

He and I came to this Fruit Street address together some seven years ago and it was my hazardous lot to work, live, and play in his company during a good part of the years that followed. Many of the relevant anecdotes are unrepeatable, but it can be revealed that some of us still have nightmares from an earsplitting cannon cracker under the bed at 3 A.M., and have often wondered if we would wake up with a toe shot off by his trusty carbine. His elaborate practical jokes often started a chain of events which led to Dr. Faxon's office, but he was not easily deterred by the "tongue-in-cheek" reprimand that sometimes resulted. More than one House Officer required the soothing effect of D.T.O. after our hero had carefully collaborated with nurses, patients, and the X-ray Department to produce an apparent "complication" in the intern's first big case. On one occasion, a formal department-head proclamation caused widespread indignation and loud protest before its fictitious nature was discovered. And many a grand round presentation was accompanied by mock X-rays or some vaudeville caper.

We all miss old "D——" and have long since forgiven him his jokes, for he is an able surgeon, a generous friend, and a genial host. We wish him lots of good luck and a constant supply of firecrackers.

Anon.

BIOGLETS

Dr. Isaac V. Manly, Third Assistant Resident in Surgery—B.S. in Medicine, University of North Carolina, 1940-43; 2 years, University of North Carolina Medical School; M.D., Harvard Medical School, March 1946; M.G.H., East Surgical House Officer, April 1946—July 1, 1947; U.S. Navy: Dispensary, Submarine Base, New London, Connecticut, 1947-49; returned to M.G.H., July 1, 1949; married June 12, 1948; one daughter.

Dr. Thomas W. Moran, Second Assistant Resident in Pathology—born in Latrobe, Pennsylvania, November 23, 1923; A.B., Dartmouth College, Hanover, New Hampshire; M.D., Jefferson Medical College, Philadelphia, Pennsylvania (Navy V-12), 1947; Intern, Presbyterian Hospital, Philadelphia, 1947-48; Assistant Instructor in Anatomy, University of Pennsylvania, 1948-49.

Dr. Walter T. St. Goar, Intern in Medicine—born in San Francisco, California, September 2, 1920; U.S. Navy, 1943-45; B.A., University of California at Berkeley, 1944; M.D., University of Rochester School of Medicine, 1949.

The Ladies' Visiting Committee is holding a weekly tea in the Medical Staff Room of the Bulfinch Building for the foreign doctors and their wives. Each of you will be cordially invited to one of these teas—with your husband, if he is free to relax for a short while. In November, our Vice-President, Jane Roe, whose husband, Ben, is in Surgery, and Pat Kerrigan, whose husband is in Pediatrics, received the Distaff guests and introduced them to the hostesses, the foreign doctors and their wives, and members of the hospital staff. Our Distaff receptionists at the December teas were Filing Secretary, Jane Frame, whose husband, Boy, is on the Medical Service, and Sally Shorey, whose husband is in Surgery.

About half of the wives attending meetings this fall were new members. Some of us have had the delightful surprise of finding at the meetings friends whom we'd known in other parts of the country, overseas, or during the earlier years of our husbands' training at the M.G.H. Those of us who "nursed" the club through its first year are eagerly welcoming the enthusiastic participation of these wives.

Mickie Schaaf is receiving many requests for information on apartments available at a reasonable rent. At present there seems to be a dearth of such apartments. If you hear of one, please post the details on the Distaff corner of the bulletin board near the house Post Office. Please date this notice, and remove it after the apartment has been taken. Also, please post the name and address of any real estate agent interested in renting to medical couples—especially couples with children.

MASSACHUSETTS EYE & EAR INFIRMARY

During the last seven months Miss Ruth A. Lotspeich, R.N., from the University of California Hospital in San Francisco, has been observing clinical procedures and techniques in the Eye and Ear, Nose and Throat Clinics. Miss Lotspeich was Head Nurse in the Eye Clinic at the University of California Hospital and will return to that position when she has completed her observations. She left the Infirmary on December 12 for New York City, where she will spend a day in the Columbia University Eye Clinic and then will leave for San Francisco, stopping off in Chicago to visit the Illinois Eye and Ear Infirmary. Miss Lotspeich has spent much of her time in the Retina Service and in the Ear Clinic.

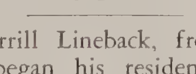
Dr. Charles S. Lane, Resident in Oto-Laryngology, completed his term of service on December 25. He will leave with his wife and child for New Orleans, where he expects to take his American Boards. The Lanes will visit relatives in Hattiesburg, Mississippi, before leaving for Fort Smith, Arkansas, where Dr. Lane will be in practice with Dr. Everett C. Moulton, a former Infirmary graduate.

Dr. Merrill Lineback, from Atlanta, Georgia, began his residency in Oto-Laryngology on December 1.

Dr. Eugene C. Hutton, Jr. has been appointed a Graduate Assistant in Oto-Laryngology.

Recent appointments in Ophthalmology are Dr. Elmer Kenneally of Bedford, Massachusetts, and Dr. Edwin B. Goodale, Jr., son of the late Dr. Edwin B. Goodale, as Residents—their terms of service to begin in January 1950.

Recent arrivals from Europe who are studying at the Infirmary are Dr. Albert Candiotti, from Paris, who is doing graduate study in Oto-Laryngology with Dr. Werner Mueller in the Mosher Laboratory, and Dr. Antonio Grignolo of Italy, who is studying with Dr. Charles L. Schepens in the Retina Service.



New addresses:—

Dr. James H. Currens (a. M)—In the December issue we published an incorrect address for Dr. Currens which had been sent to us. He is still at 226 Marlboro St., Boston, Mass.

Miss Eileen C. Glynn, R.N., 238 Wisconsin Ave., Long Beach 3, Cal.

Dr. Ward I. Gregg (*WS* 1935), 1269 Beacon St., Brookline 46, Mass.

Dr. Edward T. Smith (*Or.* 1937), 6410 Fannin St., Houston 5, Tex.

Dr. James Solomon (*r.p. N* 1944), 2331 West Third St., Los Angeles 5, Cal.

Dr. Richard Warren (*WS* 1936), 1180 Beacon St., Brookline 46, Mass.

Dr. Edward H. Wilson (*ES* 1922 & *Or.* 1923), 380 East Town St., Columbus 15, Ohio.

Brief bits:—

Dr. Edward B. Benedict, Endoscopist on our staff, attended the meeting of the Board of Governors of the American Gastroscopic Society, in Chicago, on November 3. On November 18, Dr. Benedict discussed the paper by Dr. Charles W. Flood, entitled "Benign and malignant lesions of the gastric antrum", at the meeting of the New England Roentgen Ray Society.

Dr. Richard B. Capps (*CM* 1931 & *EM* 1933) had a talk with Dr. Viets in Chicago recently. He said that his father, Dr. Joseph A. Capps (*EM* 1896) is still practising medicine, and continues to maintain a live interest in MGH affairs.

Dr. Chester M. Jones, Physician at M.G.H., was one of the guest speakers at the annual convention of the Puerto Rico Medical Association, held in Santurce, Puerto Rico, December 14-18.

Dr. J. H. Means, Chief of our Medical Services, visited the Mayo Clinic last September. On November 14, he addressed the members of the Roxbury Record Club at its meeting at the Harvard Club. He spoke on the British National Health plan.

Dr. Kenneth P. Nash's work as Assistant Resident in Psychiatry at M.G.H. has been interrupted. He has been called home because of illness in his family. His address is 1333 Winchester Ave., Glendale 1, Cal.

If you are one of those MGH-ers who have not written to THE NEWS in a long time (or ever), and you can't think of a single New Year resolution to make, here is a very worth-while suggestion: Promise yourself that before the month of January shall have disappeared down over the bottom edge of your calendar, you will find the time—somehow—to send word of your activities, through THE NEWS, to all the many friends who will be delighted to hear how things are going with you. How 'bout it?

This letter from Velma Bates Ramirez, 10 Bosque Avenue, Mayaguez, Puerto Rico, was most welcome. We are always glad to hear from the distaff side of the MGH family.

It is time I renewed my subscription to THE NEWS on my own. During the war, Lt. Alice White, Army Nurse, gave me my first copies. I had met her at the M.G.H. through my friend, Muriel McLatchie, Medical Artist. I had pencil-sketched Miss White in one of our evening drawing groups held in Dr. Paul D. White's laboratory in the Bulfinch Building. When I happened to see the name Lt. Alice M. White in front of one of the officers' housing units at Borinquen Field, Puerto Rico, I had to see if it was *the* Miss White. I received a very warm and noisy welcome. We had many visits back and forth over the space of more than a year, although Aguadilla, where Borinquen Field is located, is an hour's drive from my house. Lieutenant White was supervisor of the operating rooms.

My next copies were sent me by either Alice Dalrymple of the Allergy Clinic, or Jean McQuarrie Engborg, formerly of the Pathology Laboratory.

During my twelve years in the Children's Metabolism Laboratory, I consider myself very fortunate to have known Dr. Talbot, Dr. Harold L. Higgins, and Dr. Ramon E.

No. 21 in a series of Staff photographs
Dr. Arthur L. Watkins—Chief of Physical Medicine

Ramirez. Dr. Ramirez took one of the Harvard postgraduate courses in Pediatrics, with Dr. Higgins as his MGH professor. Dr. Ramirez and I were married in 1938.

Dr. Ramirez now owns his own 15-bed hospital, and my work in a research laboratory has helped me, as the treasurer, to fill in as accountant, secretary, technician, buyer, and administrator, until those places were refilled. Nine other doctors now bring patients to our hospital.

In the winter of 1946, when Dr. and Mrs. James Howard Means were in San Juan, Puerto Rico, my husband and I went to hear Dr. Means and had supper with him. After that, Dr. Means sent me a subscription to The News.

Since leaving the M.G.H., we have kept in touch with Dr. Stephen H. Moore, Jr., who worked in the Metabolism Laboratory while a student and then in the Children's Medical Department. He wrote us from Panama during the war, then sent us an invitation to his wedding in Texas in 1947. We learned that Terry D. Moore was born a year later. His address is 2924 Rosedale, Dallas, Texas.

My husband, who is a Lieutenant Colonel in the Medical Reserve, is working for the Army this week to complete his points for the year as a Reserve Officer. During the war, he was stationed in Puerto Rico, Washington, D. C., Clinton, Iowa, and New Caledonia, where he was with the 8th General Hospital as Chief of Communicable Diseases. Anything from mumps and pneumonia to syphilis and filaria came to his wards.

Both my husband and I enjoy The News.

A recent letter from Dr. Richard S. Cosby (*EM* 1940) would seem to indicate that the native-predicted "inevitable assimilation", mentioned in Dr. Cosby's first letter from Pasadena, has been effected. This is the first word from him since that nostalgic one, written about three years ago, and it gives the picture of a very busy life.

An opening line from southern California must necessarily state that this is the fabulous land, so it shall be reasserted only once. The Class of '38 is still surging along the "fabulous boulevard"—namely, Ed Evans, Walter MacLaren, Glenn Gummess, Stew Smith, and Bill Schuman.

My interest number one is the Cardiovascular Department at the University of Southern California, and within the department, the circuitous process of cardiac catheterization. We have been engaged with this pushing and pulling mechanism for the past two years, and are projecting it into the next twenty. As Sib Hoobler says, it is amply designed to take care of your social, athletic, and mental life for a generation. The team consists of George C. Griffith; David C. Levinson; Ray Carter, X-ray; John Dillon, anesthesia; Pat Meehan, and myself. Gene Eppinger and Lew Dexter at the Brigham have given us wonderful help. The noncatheterization time is spent in clinics and in teaching a year's course in cardiology at U.S.C. This is morning time. Afternoons are spent on private practice in Pasadena.

That's the report to date, except for the most important news: married to Miss Mary Mayo of Pasadena on May 8, 1948.

It was a little over two years ago that Dr. J. Wister Meigs (*a.r.p.* 1943) sent us a brief note and promised us a longer letter soon. However, he's written again, at last, and we are too glad to hear from him to chide him for the long delay.

Of course I'd like to keep on getting The News, but my habits haven't changed much in the past ten years and I'm slow in getting round to things.

The readers of The News might be interested to know that the Yale Institute of Occupational Medicine and Hygiene (of which I am the medical staff member) now has added an industrial hygiene engineer and an industrial nurse to the professional staff, after a year of "yours truly only" holding up the organization. Now we are a little closer to being able to fulfill the high-sounding objectives of training doctors, nurses, and engineers in Occupational Health work.

MGH house staff take note: We're trying to show the New Haven Hospital house staff that it's worth while to study conditions of employment in managing patients with peptic ulcer, as well as those with lead or benzol poisoning.

This nice letter has come from Dr. Ralph Luikart, II (*M* 1944 & *a.r.p. D* 1948). From 1525 State Street, Santa Barbara, California, he writes:

Your request for new address and information regarding my activities has been in my "must answer immediately" file for the past three months. I believe the following may adequately explain the inordinate delay.

Upon leaving the MGH Department of Dermatology and the preceptorship with Dr. G. Marshall Crawford last March, I proceeded to Los Angeles, where I worked as assistant to Dr. Samuel Ayres, Jr. (*WM* 1920) in his office, and began some work at the Los Angeles County General Hospital in the Department of Dermatology. From this base, my wife and I devoted our week ends to an examination of the beautiful countryside, up and down the coast. Santa Barbara proved to be the spot we had always dreamed of. The last of August, we moved our children, dogs, and furniture for the last time and settled at the foot of the mountains, overlooking the ocean inlet in Santa Barbara.

With the kind help of Dr. Ayres we soon became acquainted with some of the medical men in Santa Barbara. After the usual minor difficulties, we located an office and redecorated and furnished it.

In the latter part of May it rained for three days. I was told to enjoy it because that was probably the last I would see of rain until November. This proved to be amazingly correct. Santa Barbara is not troubled with the smog problem of Los Angeles, nor the heavy traffic. Since we have been here we have seen nothing but warm weather, sunshine, and an occasional light, late-afternoon fog.

The caliber of medicine in Santa Barbara seems to be exceptionally high, but I miss the ward rounds and the clinics and the friendly multiple opinions, MGH style.

I look forward to my first vacation of any length, to come back and see you all. The News seems now to be my strongest link with M.G.H. I read it completely, and enjoy it thoroughly. Best wishes to you all.

THE NEWS

No. 87 Boston, Mass. February 1950

TRENDS IN RADIOLOGY

What is Radiology and where is it going? Actually, the definition of radiology merely means the use of radiant energy in the diagnosis or treatment of disease. As the term now pertains to the work at the Massachusetts General Hospital, it applies primarily to the use of the roentgen ray in the diagnosis and treatment of abnormal conditions, and the use of radium in the treatment of certain tumors. In the future the Department of Radiology may utilize additional sources of radiant energy, applying them to either diagnosis or treatment. Instead of elaborating on future possibilities, let us look at particular points that have to do with the continuation of present practice.

Brailsford, in a recent paper (1), has outlined some of the modern trends in radiological diagnosis. Some omissions of medical practice may have an extremely important bearing on accurate diagnosis.

1. Often there is a definite failure to recognize the importance of, and to carry out, a thorough clinical examination before any radiological examination is made.

2. In the teaching of medical students, it has been a common practice to use x-ray films as a teaching medium. It is Brailsford's belief that the majority of those clinicians who are teaching have not learned the bounds and appearance of the normal x-ray film, or even the character of the artifacts produced by faulty material or careless technique.

3. More often than not, it is not understood that in many conditions the primary roentgen changes are totally indistinguishable from one another, and that only by means of serial studies is it possible to arrive at an accurate diagnosis.

4. Only a few physicians—those who have had considerable experience with Radiology—understand that the onset of a disease is not always associated with immediate changes recognizable on radiological examination: in other words, there may be a fairly long period of time between the beginning of a disease process and the time it is demonstrated on an x-ray film. (This may apply not only to such chronic conditions as tuberculosis, but equally well to some fractures. *Author*)

5. It is important to recognize, also, that the x-ray film may show very extensive changes, even though the patient is clinically normal in all respects; this x-ray abnormality may well represent the end result of previous disease. (A rather common example is collapse of a portion of the lung; this may be the result of a foreign body in a bronchus of so-called postoperative atelectasis, or of a tumor which is growing within the associated bronchus. It may, however, be only the scar of a previous pneumonia which the patient had twenty or thirty years before. *Author*)

To prevent such omissions from creeping into present day practice is a thing for which we must all work together.

Brailsford goes on to point out that mass radiography has certain disadvantages. He states that it has caused much unnecessary physical and mental pain; that it represents essentially bureaucratic regimentation—measures designed by officials and enthusiasts, who do not know of the five omissions already mentioned, or who lack the experience which qualifies them to judge the efficiency of such mass survey procedures; that it has not added anything new to our knowledge of disease of the chest; and finally, if disease is discovered and recognized, particularly tuberculosis, there is nowhere to treat these patients other than in the home. Actually, a great deal of money is being expended day by day to carry out these surveys, yet very little money is being expended to improve the home conditions of these prospective patients. Brailsford contends that when a cure for a disease is known, or when a place to treat the patient and treat him adequately is available, mass survey should be used to the fullest extent.

Whether one agrees with Brailsford or not, it must be pointed out that those of us who reside in Boston can testify that some of these stipulations which he has made are already in effect. We have recently been through a survey of the metropolitan area by the United States Public Health Service, in which many persons have been studied by means of survey films. The Boston survey has revealed some unknown cases of active tuberculosis, numerous silent chest tumors, and certain unsuspected heart lesions, as well as many other abnormalities of the chest. That some benefit has resulted from these studies is therefore apparent, and it is sincerely hoped that this benefit will outweigh any of the associated mental suffering. On the other hand, certain isolated personal hardships must undoubtedly result if a large group is to benefit. In other words, a certain amount of time is required after the patient has been called back for the large film before a definite recognition of the process can be established. During this time the patient may be under the suspense of a possible diagnosis of cancer of the lung or tuberculosis, whereas in many instances it may be a totally benign process such as scars of previous injury. The close cooperative effort of the entire staff of the Massachusetts General Hospital will be necessary to make certain that all patients who come here as the result of the survey findings receive the exceptional care which this Hospital can give.

Brailsford brings out another point of interest—that there is a definite trend today for members of various specialties to seclude radiographs illustrating conditions with which they deal. This means that the x-ray departments of hospitals no longer have access to these films, are hampered in their attempt at accurate study, and, therefore, in the care of the patient and in research work. If this practice were to become widespread, clinical research in the field of Radiology would be almost impossible. It seems to us that the greatest benefit to everyone concerned can come only from total cooperation between the Department of Radiology and the other clinical services. Unquestionably, if Radiology is to maintain its proper position, the radiologist must continue to be trained in all branches of medicine, and he must be in a position to cooperatively assist his colleagues in an intelligent manner. It may be assumed that the thoughts expressed above and originally contributed by an Englishman apply only to England. The fact is, however, that they are almost equally applicable in this country, and we must see to it that we sift the good points from the bad and benefit from those that meet our own need.

During recent months certain developments have come about in the Department of Radiology which, perhaps, should be noted. Certain steps forward have been attempted; some have succeeded, some have failed. It is regrettable that all our hoped-for progress has not been attained, but for that which has, we are grateful. In the past months, forecast of a two-million-volt x-ray generator for the treatment of cancer has been made. Today we can say we are on the verge of having this an actuality. The process of securing and installing this machine has been long and painful to many people. It is one of the first two-million-volt therapy generators available for treatment of patients with malignant disease. In consequence, the Massachusetts General Hospital is now in the unique position of being able to treat patients with supervoltage therapy ranging from one million to two million volts.

Perhaps some of the pitfalls and the

difficulties encountered in planning for the new generator might be of interest. First of all, it was noted that the great success of the long-used one-million-volt machine of the Van de Graaff type, built by Dr. John G. Trump and his associates at Massachusetts Institute of Technology, was due largely to its location on the same floor on which other x-ray treatment was carried out. In consequence, after much thought, much discussion, and much planning, it was decided that it would be best to install the two-million-volt machine in the same area. Because the major cost of installation was borne by an anonymous donor, it was possible to obtain satisfactory construction procedures which allowed such installation. It was found that a room which had previously been used for superficial therapy could be structurally altered so that it could bear the weight of the lead necessary for adequate protection. This involved numerous structural changes, with additional steel work above and below. The acquisition of the lead (20 tons) at a time of great scarcity is a story in itself, but it was finally achieved. All of this took the usual drawn-out amount of time, but few difficulties were encountered by our Department until it came time to install a suitable door. This door was one which should work automatically under electric power, it weighed approximately 2600 pounds, and it was necessary that a nurse should be able to open it should there be a failure in the electric power. The first attempt was totally unsatisfactory, as no nurse nor even one of the present day television wrestlers could open the door manually. After many months of delay, a suitable track on which the door travels was obtained. At last the room was ready, and in the summer of 1949 came the installation of the machine. This seemed a big step ahead, and we were all delighted. However, there were certain mechanical problems which had to be overcome after the installation of the equipment and these were, or are, gradually being taken care of. It was found that certain additional protective measures had to be installed, and these are being added as rapidly as possible. In view of these difficulties, the machine has not yet been used to its fullest extent. However, the first patient was treated in September 1949, and a limited number have been treated since. Within the next few weeks it is hoped that the machine will be available for full use in the treatment of all sorts of deep-seated malignant lesions. Above all, it should be noted that the development of the two-million-volt machine is due to a combined effort of the Massachusetts General Hospital and the Massachusetts Institute of Technology, furthered by Dr. John G. Trump and the High Voltage Engineering Corporation. I am sure that all of those involved have benefited by this combined effort. The Department of Radiology is deeply grateful to the anonymous donor who has made this therapeutic advance possible.

THE NEWS has already carried the information that Dr. Paul D. White was one of the major instigators in the planning and securing of a Research Room for the Radiology Department. This room is already available on a scheduled basis to all departments and services of the Hospital for research which involves x-ray. It may seem as if we have been remiss in not equipping it more adequately, but the developments of radiological equipment have made it imperative that no decision regarding new equipment be made until such development becomes somewhat stabilized. As soon as the latest equipment seems more or less available it will be purchased with funds which have been obtained, and full-scale utilization will be possible. Studies by means of cardiac catheterization, angiocardiography, and studies of the cerebral circulation are expected to be the first major investigative problems. Other groups whose research studies involve the use of x-ray are invited to share in the use of this room.

This has been an attempt to summarize some of the trends in Radiology at the Massachusetts General Hospital and elsewhere in the world. It is our wish at this time to express our sincere appreciation of the extreme cooperation which we have received from all of the services and departments of the Hospital.

Laurence L. Robbins, M.D.,
Chief of Service

(1) Brailsford, J. F.: "Modern trends in radiology", *British Medical Journal,* Oct. 1, 1949, pp. 724-728

The Board of Trustees, at their meetings on November 25, and December 9 and 23, 1949, voted:

That the resignation of Dr. Jacob E. Finesinger become effective as of January 31, 1950 rather than December 31, 1949;

To promote Dr. Thomas J. Quinn to Resident in Anesthesia, effective January 1;

To establish the title of "Chief Resident" for the single Chief Resident now serving the Medical Service.

To appoint:

Dr. Louis Bakay as Assistant Resident in Neurosurgery, from January 1 through June 30;

Dr. LeRoy L. Eldredge as Assistant Resident on the Children's Medical Service, to become effective October 1 rather than July 1;

Dr. John G. Freymann as Assistant Resident in Medicine for one year, beginning October 15;

Dr. Edgar J. Schoen as Intern on the Children's Medical Service for one year, beginning July 1;

Dr. William D. Sohier, Jr. as Resident on the Medical Service for one year, beginning July 1;

Dr. Lyman C. Wynne as Assistant Resident in Psychiatry, beginning January 1, 1951.

To appoint the following Medical and Surgical Interns for one year, beginning July 1:

Medical

Irving P. Ackerman
Leonard W. Cronkhite, Jr.
James J. Ferguson, Jr.
Richard A. Field
Amasa B. Ford
Arthur Haut
Kurt J. Isselbacher
Leonard Laster
Federico Moro-Castaneda
Stuart Ragland, Jr.
J. Max Rukes
Edwin C. Wood

Surgical

Richard C. Austin
Robert C. Coe
Frank W. Garran, Jr.
John M. Head
David B. Sheldon
Eji Suyama

The Trustees also voted to appoint:

Mrs. Henry Bigelow, Mrs. G. Tappan Francis, Miss Sally Johnson, and Mrs. John R. Post as Honorary Members of the Advisory Committee, School of Nursing;

Mrs. Charles Kerby-Miller a member of the Advisory Committee, School of Nursing.

At their meetings on December 14, 21 and 28, and January 4, the General Executive Committee voted:

To accept the resignation of Dr. David Fisher from the position of Clinical Fellow in Surgery, as of December 17, 1949;

To grant Dr. William R. Waddell, First Assistant Resident in Surgery, leave of absence for one year, beginning January 1.

To promote:

Dr. Agnes Burt from the position of Intern to that of Second Assistant Resident in Pathology, beginning July 1;

Dr. Ernest S. Crawford from the position of Third Assistant Resident in Surgery to that of Second Assistant Resident, beginning January 1;

Dr. Richard Garrity to the position of Senior Resident on the Neurosurgical Service for the period January 1 through August 31;

Dr. George H. Lawrence from Third to Second Assistant Resident in Surgery, beginning January 1;

Dr. Isaac V. Manly from Third to Second Assistant Resident in Surgery, beginning January 1;

Dr. Winfield S. Morgan to the position of Resident Pathologist, beginning July 1;

Dr. Grant V. Rodkey from Second Assistant Resident in Surgery to First Assistant Resident for six months, beginning January 1;

Dr. Benson B. Roe to the position of Resident in Surgery for one year, beginning January 1.

To appoint:

Dr. Guillermo Balz a Graduate Student Assistant in Surgery for the period November 1, 1949 through January 31, 1950;

Dr. Charles H. DuToit a Clinical and Research Fellow in Medicine for six months, beginning January 1;

Dr. Raoul Groulx a Graduate Student Assistant in Surgery for the period November 1, 1949 through July 31, 1950;

Dr. Bernard J. Harries a Clinical and Research Fellow in Neurosurgery from January 1 through May 31;

Dr. Thomas F. Hines a Clinical Fellow in Physical Medicine, effective January 4 through March 31;

Dr. Milton C. Hoffman a Clinical and Research Fellow in Surgery for the period March 1, 1950 through August 31, 1951;

Dr. Keh-Wei Huang a Research Fellow in Neuropathology for six months, beginning January 1;

Dr. William R. Merrington a Clinical and Research Fellow in Surgery from February 1 through September 30;

Dr. Edward C. Porter a Clinical Fellow in Radiology for the period July 1, 1950 through June 30, 1951;

Dr. Albert E. Smith a Clinical Fellow in Psychiatry, as of December 14, 1949;

Dr. Bernard G. Stall, III a Clinical Fellow in Medicine for the month of January, to work in the Staff Clinic;

Dr. Ruth Stauffer a Clinical Fellow in Neuropathology for six months, beginning January 1.

OFFICIAL NOTICE

At the meeting of the General Executive Committee held on December 28, 1949, the Committee approved the report of the Pharmacy Committee, listing the following drugs which should *not* be administered parenterally by nurses:

Acetyl-beta-methylcholine (Mecholyl) chloride and bromide
Carbaminylcholine chloride (Doryl)
Digitoxin
Furmethide
Histamine and compounds
Mercuzanthin
Metrazol
Paraldehyde (except on Psychiatric Service)
Penicillin in oil and wax
Picrotoxin
Protoveratrine
Quinine salts
Salyrgan-theophyllin
Sulfonamide salts
Tetra-ethyl ammonium chloride (Etamon)
Urecholine
Any preparation which has not been issued by the M.G.H. Pharmacy

No limit has been set as to the volume of solution or suspension which may be administered. If the volume is believed by the nurse to be excessive for a given patient, the doctor writing the order should be consulted.

Dean A. Clark, M.D.,
General Director

Research workers at the Massachusetts General Hospital are well acquainted with the shortage of laboratory space. Every time a department head has had expansive ideas, he has been pulled up short by the impossibility of squeezing another man, woman, mouse, or guinea pig into his existing quarters, and demands for more room have been met at the Director's Office with shrugged shoulders. The squeeze has become increasingly acute with the growth of research activities of the hospital in the past three decades.

In 1896, the present Pathology Building was completed, which seemed to solve the problem at that time. But, as early as 1917, the administration had to agree to new laboratories in the east wing of the Bulfinch Building. Again, in the early 20's, a great hue and cry was raised for more room, and consequently the surgeons were given research space in the west wing in 1922, and a large addition to the Bulfinch, providing more medical laboratories, was built in 1925. With the opening of the White Building in 1939, an entire floor was devoted to research laboratories and offices; and in 1942, with the transfer of the Huntington Memorial to the M.G.H., two floors of the Domestic Building were taken over.

As a result of the reorganization of the Children's Medical Services and the extension of the teaching and research activities in this area, the Bradlee Ward soon proved to be inadequate—not only for the housing of patients for this service, but also for the rapidly-expanding research program. However, the opening of the Burnham Memorial early in 1948 provided new quarters for research, as well as modern clinical facilities for the Children's Medical Service.

At the end of World War II, there was a general feeling that something had to be done immediately about the overcrowding in the Bulfinch, the Huntington, and the Pathology Building. A committee of the staff was appointed by the Trustees to investigate the whole problem, and in the summer of 1946 their report convinced the Trustees of the necessity of a new Medical Research Building. The Trustees and staff Building Committee agreed to a plan which involved the demolition of the Pathology Laboratory and the Allen Street Building, as well as the old Power Plant, and the construction of a new building on this site.

On August 1, 1946, this plan was announced in the press and the search for building funds was begun. The goal, based on estimates of the architects, was set at $2,000,000. A few thousand dollars were contributed to the fund that autumn, but no formal drive was planned until 1948. January of 1947 found the hospital faced with a precarious situation concerning fluid capital funds, caused by increased operating costs. Consequently, the Trustees felt that they should devote all their efforts for the year to raising unrestricted capital to replace the amount spent on operating deficits for the period since the war. Thus, it was not until the spring of 1948 that the plans for the Research Building were taken out of the closet, dusted off, and put once again on the Trustees' table.

In January of that year the Committee on Research completed a detailed study entitled "A Cancer Hospital within the framework of a General Hospital", which showed in detail—department by department—what was being done about cancer research, teaching, and control at the M.G.H. This was made the basis of an application to the National Cancer Institute of the U.S. Public Health Service for a construction grant, and in June 1948 a grant of $700,000 for the building of new cancer laboratories was approved by Congress on the recommendation of the National Cancer Advisory Council and the Surgeon General. At about the same time, the Hyams Fund of Boston made a very generous grant of $100,000 for the construction of permanent laboratories on the fifth and sixth floors of the Domestic Building, which were to connect with the new building on Allen Street.

In the autumn of 1948, the plans for the new building were reviewed again, with attention being paid particularly to the need for reconnecting the electric and steam conduits and for erecting new shipping and service platforms for the stores of the hospital, as a result of the dislocation which would be caused by the new building. Revised estimates presented to the Building Committee indicated that the new Research Building, at the prevailing building prices, would cost at least $2,750,000. With this as a goal, a public drive was initiated in December for the required balance of $1,950,000.

At the same time, another application was prepared for the National Heart Institute of the U.S. Public Health Service, and in September of last year, on the recommendation of the National Heart Advisory Council and the Surgeon General, a grant of $485,000 for the construction of cardiovascular and gerontology laboratories was made available to us by the 81st Congress.

Meanwhile, the public response to our drive was rather discouraging, and the architects and engineers kept presenting more and more complications to a building on the Allen Street site. In order to accommodate all of Pathology, the Huntington, and the routine laboratories, as well as to provide new space for expansion in the basic sciences and for new quarters for cardiovascular and arthritis research the Trustees saw a bill for more than $3,000,000 coming their way. At the same time, there was some urgency to start construction in order to take advantage of the money already appropriated by Congress. So, after considerable thought and discussion by the Trustees, the General Executive Committee, the Research Committee, and the Building Committee, it was decided to change the building site. The location finally decided upon extends from the corner of Allen and Blossom Streets, where the Resident Physician's House has stood, south to the Gate Lodge. The Resident Physician's House is not to be torn down, as was previously reported. Instead, it is being moved to another location, just south of the Lodge.

The Trustees authorized the preparation of plans for this new building in July, and the tempo of the public drive was stepped up in December of 1949. On January 1, 1950, we had in pledges and cash on hand a total of $1,185,000 from two grants of the U.S. Public Health Service and $923,000 from the local drive, making a total of $2,108,000. Ground was broken on December 30, even though the fund was still short of the total which the Trustees had hoped to raise.

In accordance with the policy recently adopted with respect to 1950 for all Red Feather Agencies, we shall not conduct a fund-raising campaign this year, but we have faith that some people within the Community Fund area, and many outside, will wish to be sure that this Research Building is adequately equipped and hence that funds for this purpose will be forthcoming.

When finished, this building will provide 30,000 square feet of new laboratory space. One floor will be devoted to cardiac research, two floors for the cancer laboratories of Huntington, one floor for the basic sciences—particularly enzymology, and one for arthritis research. Animal farms will occupy the sixth floor, and the basement will be occupied by supply rooms, hot laboratories, and special heavy equipment.

Recognizing, as we must, the current importance of degenerative disease as a community problem, the hospital—with this building—should be in a position to make an aggressive attack in the second half of the 20th century upon diseases that fall within this general area. At the same time, more space will be available in the existing plant for routine laboratories of the hospital.

D. C. C.

⁂

On December 15, 1949, M.G.H. inaugurated a Credit and Collection Department, under Miss Frances M. Hernan as Credit Manager.

In general, the duties of the Credit and Collection Department are to take over and to follow the accounts of patients who leave the hospital with unpaid balances. Miss Hernan will interview such patients at the time of their departure, make arrangements with them as to the amounts and times of payments on account, and follow the accounts with such statements and correspondence as may be necessary. Her office, for the time being, is a room opening from the main corridor of the White Building, opposite the Cashier's Office.

While we were talking with Miss Hernan about her new duties the other day, she outlined briefly the developments in the Accounting Office which have taken place during her tenure as Chief of the Department, and for which she was largely, if not entirely, responsible. She said that when she first came to the hospital, all accounts were kept by hand, in cashiers' ledgers. It was under her direction that the machine system was installed, to be followed by the present IBM (International Business Machines, if you need to have those letters deciphered—as we did). Miss Hernan also instituted the GI program here at the hospital, and is responsible for setting up and carrying out the High School program of "earn while you learn" for senior high school honor pupils, who may come to the hospital Accounting Department for two hours' instruction a day.

Miss Hernan is particularly well fitted for her new position, due to her highly specialized training and experience with all branches of accounting, and to her complete familiarity with MGH policies and procedures gained during her several years as Chief of our Accounting Department. In addition, she tells us this new work is something she thoroughly enjoys.

Outside the hospital, Miss Hernan has been a Director-at-Large of the American Association of Hospital Accountants, Vice-President of the Boston Chapter of the National Retail Credit Men's Association, and was the first woman to be elected Chairman of the International Consumer Credit Convention.

⁂

On January 5, Dr. Dean A. Clark sent the following letter to all members of the MGH Staff:

The attached letter is being sent to all Town and City Boards of Public Welfare in Massachusetts in order to clarify the Hospital's policy with regard to payment of cost for Public Assistance recipients.

Since 1946, our published charges for services in both wards and Out-Patient Department have been set as nearly as possible at true cost. The Trustees feel that Public Welfare agencies should be expected to meet these charges for their legally accepted clients just as they do the costs of food, clothing, and shelter for these clients. Charitable funds of the Hospital, it is felt, should be used principally to assist persons who are not clients of any Public Welfare agency but who are nevertheless unable to pay the cost of the hospital care they require.

It is of great importance that all members of the Staff keep these policies in mind in recommending patients for admission either to the Out-Patient Department or to the Hospital Wards. In the past, misunderstandings have arisen because Staff Members have informed patients that they would be admitted to the Hospital or Out-Patient Department, without realizing that they might be refused because of general admitting policies. This has caused embarrassment which we hope to avoid by making these policies clear to all Staff Members.

If any questions occur to you after reading the letter, I should be glad to give you further information.

This is a copy of the enclosed letter:

To Boards of Public Welfare
Gentlemen:

This is in further reference to Dr. N. W. Faxon's letter of August 23, 1949, in which the general policy of the Massachusetts General Hospital with respect to charges for patients who are clients of Public Welfare Agencies was outlined. At the request of State Commissioner of Welfare Tompkins, the Hospital wishes further to clarify this policy.

The Hospital desires to make certain that its unusual range of facilities and services is available to all whose medical problems require the special types of care it is equipped to provide. We wish to make it unmistakably clear that no person will be refused admission whose medical problem is such as to require treatment here. As stated in our letter of August 23, emergency cases arriving here as a result of accident or of illness so sudden and severe that time does not permit arrangements in advance will always be admitted without regard to financial circumstances. Consideration will also be given to such cases by advance arrangement when they are in danger of death or serious impairment and require special treatment of a type that this Hospital is qualified to render.

Our general policy also allows for consideration of patients who have previously been in the Hospital for the same condition or who have been under treatment in our Out-Patient Department for a considerable period of time, who in effect no longer have any family physician other than our Out-Patient Department, and for whom hospitalization as an in-patient is an incidental part of the long-term management of the case.

While payment of full cost will be expected in all such cases, emergency or otherwise. under all circumstances the medical needs of the patient will continue to be our first concern.

Welfare Board clients who are not emergency cases or whose conditions can be treated equally well at another hospital or clinic, however, cannot be admitted either as in-patients or out-patients unless the agency agrees to pay the full cost of their care.

It is our hope that this clarification of our policy will assist Boards of Public Welfare in counselling physicians as to the type of patient for whom the Boards will authorize payment for care at this Hospital.

I should welcome suggestions from Welfare Officers and others interested as to the most effective methods for the application of our general policy and would be glad to discuss this entire matter personally with any of you who might wish a conference.

Sincerely yours,
Dean A. Clark, M.D.,
General Director

⁂

The Medical Art Department, in planning the Christmas card display, discovered so much hidden talent in the hospital that we decided to have a series of one-man shows in the Brick Corridor during the winter and spring.

It is impossible to include in this first showing all the members of the hospital family who have creative ability along artistic lines. However, if this year's exhibits are successful, we shall plan a second series for next year.

Here is the schedule for the first shows. We hope you will enjoy them.

Jan. 14-27	Simeon Gagne, Maintenance Dept.
Feb. 1-10	Dr. Ernest Craige
Feb. 20-28	Dr. Robert J. Joplin
Mar. 1-18	Dr. J. Dellinger Barney
Mar. 18-31	J. Jones, Housekeeping Dept. - Photography
Apr. 1-15	Dr. Grantley W. Taylor
Apr. 15-29	Dr. Somers H. Sturgis
May 6-12	Dr. Armin Klein
May 6-20	Miss Anna M. Viden, Nursing Dept.
May 20-30	Dr. James Howard Means
June 3-17	Dr. Richard C. Webster, Jr.
June 19-30	Miss Gabrielle Bouvier, Photographic Lab.

⁂

Alumni of all departments of the hospital will realize the loss occasioned by the resignation of Miss Edith E. Parris on December first, to accept an editorial position at the National Institute of Health.

Miss Parris started as stenographic assistant to Miss Florence Painter when the latter edited the Case Records under Dr. Richard Cabot's direction. She transferred to the Pathology Laboratory a few years later, learned histologic technique under Miss Lillian Leavitt at the Mallory Institute of the Boston City Hospital and became chief technician and administrative secretary of the laboratory. Many generations of interns and residents will remember her as the person who always knew the answers to any laboratory problem, who was never too busy to find a mislaid report, to check a possible error, or to correct misunderstandings. Throughout the years she continued to devote a significant portion of her time to the Case Records, gradually assuming more and more of the editorial responsibility and eventually becoming their Assistant Editor. Much of their success is due to the liveliness and spontaneity of the recorded discussions which she fought unremittingly to preserve, in the face of an often discouragingly inappreciative editorial policy in the Journal's office.

Recognition of her editorial ability directly led to the offer—too good to be refused—of the Managing Editorship of the *Journal of the National Cancer Institute* at Bethesda, Maryland. The best wishes of her innumerable friends in the Massachusetts General Hospital population follow her to her new position.

T. B. M.

Brief bits:—

Dr. Henry K. Beecher, Chief of our Anesthesia Service, is to give the E. Starr Judd Lecture in Minneapolis on February 16. His subject will be "Research and growth in the field of Anesthesia".

An article by Dr. Edward B. Benedict, Endoscopist on our staff, entitled "The differential diagnosis of benign and malignant lesions of the stomach by means of the flexible operating gastroscope" will be published in the February issue of *Gastroenterology*. Dr. Benedict and Dr. I. R. Jankelson discussed the paper entitled "Gastritis, with special reference to complicating hemorrhage" by Drs. N. Zamcheck (*P* 1943) and T. C. Chalmers, at the Dowling Amphitheatre Discussion at Boston City Hospital on December 9.

Dr. Benjamin Castleman, Pathologist at M.G.H., was one of the guest speakers and conducted a Clinico-pathological Conference at the Annual Fall Conference of the Medical Society of the Seventh Congressional District of Louisiana, held at Lake Charles. Dr. Castleman says, "It is always gratifying to realize how popular the Cabot Case Records of the M.G.H. are, all over the country." As Chairman of the Northeastern Section of the College of American Pathologists, Dr. Castleman presided at the recent meeting of the organization, held in New York City.

A new textbook, *Essential Urology,* by Dr. Fletcher H. Colby, Chief of our Urology Service, has just been published by the Williams and Wilkins Company.

The Dermatology Department announces a recent visitor—Dr. Margaret H. Hardy, from the Strangeways Laboratory in Cambridge, England. Dr. Hardy gave a lecture to members of the Department of Medicine and the Department of Dermatology on "The histochemistry of the hair follicle". Dr. Hardy also participated in a seminar on the same subject in the Department of Anatomy at the Harvard Medical School.

Dr. Francis R. Dieuaide, Scientific Director of the Life Insurance Medical Research Fund, New York City, was a visitor in the Dermatology Department in December. While here, he discussed with members of the house staff and graduate students in the department, the place of research in the training of a clinician. Dr. Dieuaide was formerly Clinical Professor of Medicine in the Harvard Medical School and Physician at M.G.H. At one time he was Chief of our South Medical Clinic.

The office of the Gynecology Service has been moved from White 3A to Vincent 2. It now occupies the former Visitors' Room on that floor.

Dr. Tracy B. Mallory, Chief of our Pathology and Bacteriology Department, was one of the guest speakers at the Joint Meeting of the Southwestern Region of the College of American Pathologists and the California Society of Pathologists, held in San Francisco on December 3 and 4. He also conducted a Slide Conference under the auspices of the California Cancer Commission.

Dr. Arthur A. Thibodeau (*res. fel. Or. S*) announces the removal of his office for the practice of Orthopedic Surgery to the New England Center Hospital, 30 Bennet St., Boston, Mass.

MASSACHUSETTS EYE & EAR INFIRMARY

Just before he left for Europe, Dr. Faxon asked your editor to publish this letter of thanks from him to the Eye and Ear Infirmary for their gifts. He said he knew of no other way to reach everybody he wanted to thank. Here is his letter:

> The clock strikes "Eight Bells" and each stroke brings grateful memories of the friendship and generosity of the Staff and Employees of the Eye and Ear Infirmary. Words are but empty thanks, and yet it is only in this way that I can convey to you my gratitude for your gifts.
>
> The Infirmary has always radiated a friendly atmosphere, and all who have come within its influence forever retain an affection for it and those connected with it.
>
> During many years we have learned to do without much that we desired and yet to do the day's work well. It is comforting to know as I leave the Infirmary that, thanks to the energy of the Managers and Staff, the new operating rooms and private floors will soon be completed, to fill a long-felt need.
>
> With Dr. Osler, I hope that I can learn "to bear the affection of my friends without pride", and yet each "bell" of your clock will remind me, through the years to come, of what the Eye and Ear has meant and will always mean to me.
>
> Thank you, one and all, for the clock and the other gifts.
>
> Sincerely,
>
> **Nathaniel W. Faxon**

The Aniseikonic Clinic, founded at the Infirmary in February 1942 for the study and treatment of unequal image and under the direction of Dr. Mahlon T. Easton, will be discontinued for the present and all patients will be referred to Dr. Easton's offices where he will continue his study.

Dr. David G. Cogan, Director of the Howe Laboratory, announced that current investigations in the Laboratory include an Atomic Energy Commission Contract to study "The determination of the cataract togenic and morphology of cataracts".

On recommendation of the Board of Surgeons and the Executive Committee, the Board of Managers announced the following promotions on the Oto-Laryngological Staff: Dr. Josiah E. Quincy and Dr. J. Charles Drooker from Assistant Surgeons to Associate Surgeons; Dr. Frank R. Shlossberg, Dr. Aram Roopenian, and Dr. Calvin M. Cerrato from Clinical Assistants to Assistant Surgeons.

Dr. William L. Smith completed his residency in Ophthalmology on January 31, and will take up his duties at the U.S. Naval Hospital at St. Albans, Long Island, where he will be in charge of Ophthalmology. Dr. Smith holds the rank of Lieutenant Commander, USN, in the Medical Corps.

Dr. Joao Cruz Guimaraes (*Oto-Lar.* 1946) of Rio, Brazil, was a recent visitor at the Infirmary. Dr. Guimaraes plans to study in New York City under Dr. Julius Lempert.

BIOGLET

Dr. Chiu-chen Wang, Assistant Resident in Radiology—born in Canton, China, 1922; Lingnan University, 1940-41; M.B. and B.S., National Kwei-yang Medical College, 1941-47; Intern, Canton Hospital, Canton, China, 1947-48; Medical Resident, Canton Hospital, 1948—June 1949; Medical Intern, University Hospital of the Good Shepherd, Syracuse, N. Y., July 1949—December 1949; brother—Chiu-an Wang (*WS* 1944).

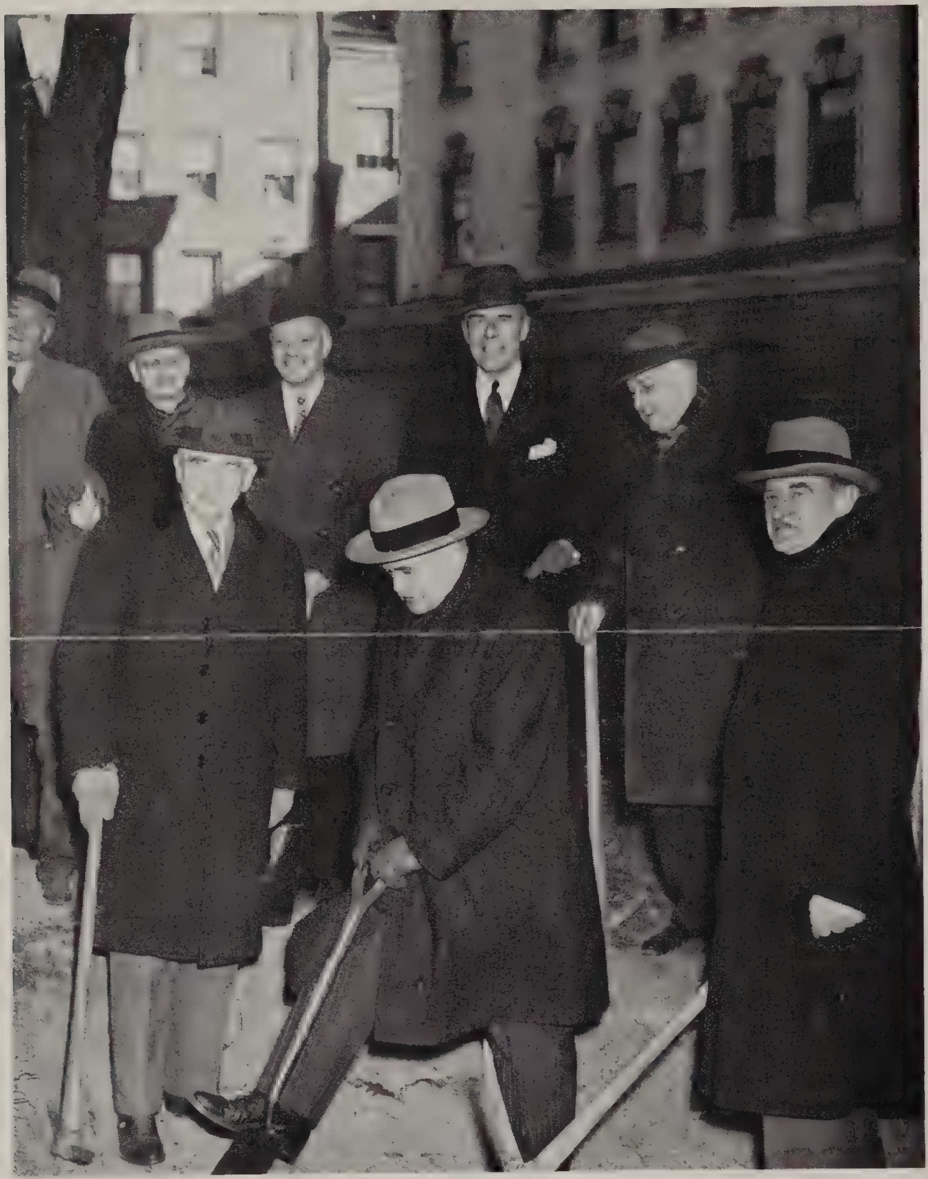
To all newly-arrived House Staff and Fellows:

If you have a wife, and she has not yet received an invitation to the Distaff Club (an organization made up of the wives of MGH and E&E House Staff and Fellows), please ask her to phone Enis Martin, our File Secretary—TR 6-6593, or drop her a card—250 Brattle St., Cambridge, Mass., giving name, address, telephone number, and your service. Your wife will be cordially welcomed to our group.

The Distaff Club held its January meeting in the Nursing Supervisors' dining room at the hospital. New officers elected for 1950 are: President—Sue Davis, whose husband Jim is in Surgery (Sue is out-of-town; we hope she'll accept the office); Vice-President—Dorothy Nielsen, whose husband Tam is in Surgery; Filing Secretary—Enis Martin, whose husband Jim is in Anesthesia; Treasurer—Pearl West, whose husband Don is in Surgery. Kitty Morgan, Corresponding Secretary, will continue in office until June 1950.

Several Distaff members, representing different localities, will function as a Housing Committee, under the chairmanship of Rita Barnes, whose husband is in Surgery. Please notify Rita—126 Myrtle St., Boston, or telephone LA 3-7573—about housing needs and vacancies.

The Ladies' Visiting Committee has graciously invited all Distaff members and their husbands who have already been guests at one of the Monday teas in the



Breaking ground for the new Research Building, December 30, 1949, with some of the Trustees and Staff, the Architect, and a Construction Representative taking part

Front row: Mr. Phillips Ketchum, Mr. Ralph Lowell, and Mr. Henry R. Shepley
Back row: Mr. William H. Nye, Dr. Charles L. Clay, Dr. Dean A. Clark, Mr. Francis C. Gray, and Mr. John R. Macomber, with Dr. Clark's son as an interested spectator

Medical Staff Room in the Bulfinch Building to feel free to drop in for a cup of tea any Monday between 4:30 and 6:15, without specific invitation. And *do* ask your husbands to bring a couple of unmarried doctors along with them.

The February meeting will be held Wednesday, the 8th, at 7:30, in the Nursing Supervisors' dining room. Chairman of the Hostess Committee is Mary Sweet, whose husband Paul is a dentist. For information regarding the meeting, phone Mary at RI 2-0693.

We take no pleasure in publishing this letter from Mrs. William M. Horner, for it announces her resignation as Health Supervisor of Staff and Personnel. Mrs. Horner has been a real friend to countless numbers of our hospital family, and her departure is regretted by all of us. Her note says:

> At long last I have found it necessary to send Miss Sleeper my resignation from the Staff Clinic. As I had expected to work for the "duration", only, it is really time for me to become a "full-time domestic" again. My family are delighted with the decision.
>
> I miss all my associates at the General more than I can say. All my relationships there seemed so personal that my leaving has resulted in a really big hole. However, my daughter is now home from college and is very happy doing chemistry for H.M.S. at the Thorndike Laboratory.
>
> I shall look forward to seeing you all when I drop in to call.

We always experience a special degree of appreciation when we receive a "first" letter from any of our MGH family. This one, from Dr. Walter S. McClellan (*WM* 1925), is a good illustration of a most engaging letter from one who felt he had nothing of interest to say. We wish we might look forward to equally "uninteresting" ones from many more of our alumni.

Dr. McClellan writes:

> I have been receiving The News during the war and since, and it has given me pleasure to read the interesting letters which have come to you from all parts of the world. I, personally, am unable to write you any interesting travel letter, as I have been located in the same place for nearly twenty years. The only variation on that, with reference to world-wide conditions, was service in the Medical Emergency Program of Civilian Defense. The seriousness with which this program was carried through during the early war years indicated without question the tenor and thought of the people, particularly on the eastern seaboard. Many of your readers will recall tense days when it was thought possible for enemy craft to actually attack the seaboard. In attempting to practise the art of Civilian Defense it was necessary to travel under dangerous conditions at night, and some of the incidents which were established for the training of medical and other emergency personnel now actually appear really dangerous. There is no question but that this great movement had its place and rendered a great deal of reassurance to the inhabitants. It is possible that more of this program should be developed at the present time.
>
> As I mentioned above, I have been in my present position since 1931, when I came to Saratoga Springs to assume the medical direction of the development of the Saratoga Spa. This has been an interesting period, associated at times with disappointment because of lack of progress, and at other times with pleasure because of apparent progress. The spas of our country can provide an important medical service, particularly for patients suffering from chronic medical conditions. They will, no doubt, play a greater part in the whole field of general rehabilitation as the years go on.
>
> I realize this is no particular news note for publication, but I send it for what it may be worth to you.

* * *

New addresses:—

Dr. Mahlon T. Easton (*Oph.* 1936), 1180 Beacon St., Brookline 46, Mass.

Dr. Champ Lyons (*WS* 1933), Department of Surgery, Medical College of Alabama, 620 South 20th St., Birmingham 5, Ala.

* * *

A party, honoring Mrs. Grace W. Myers, Librarian Emeritus of Treadwell Library and of the Medical Records at M.G.H., took place on November 14. It was the occasion of Mrs. Myers's ninetieth birthday, and her hostess, Mrs. Anthony, very kindly arranged for an "At Home" for her. Dr. and Mrs. Chester M. Jones, Dr. and Mrs. T. Stewart Hamilton, Miss Sally Johnson, Miss Alvira B. Stevens, Miss Ida M. Cannon, Miss Isobel V. Duguid, and others came to pay their respects to this remarkable little lady. Birthday letters arrived from Drs. W. Jason Mixter, Elliott P. Joslin, F. Gorham Brigham, and Henry R. Viets. There were many telephone messages and flowers, and the birthday cake was in evidence, with ice cream to keep it company. Altogether, it was a very festive occasion, and Mrs. Myers was delighted that so many of her old friends remembered her.

Along with our own belated but sincere congratulations to Mrs. Myers, we wish to recommend to you all her delightful *Autobiography,* recently published. It is a small volume, but it contains accounts of many interesting and amusing experiences from her long and active life. If you have not known Mrs. Myers personally, you will understand why we called her a "remarkable little lady" when you have finished reading her latest book.

THE NEWS

No. 88 Boston, Mass March 1950

OTO-LARYNGOLOGY DEPARTMENT AFFAIRS

This department was probably the most seriously displaced of all, this year, by the beginnings of the much-needed reconstruction of the Infirmary. However, in spite of having to face temporary operating rooms in the Out-Patient Department, as well as the placing of children in the Burnham Building and private patients on the fifth floor of Baker, there were but few complaints and the workings of the department, although handicapped, ran smoothly.

Expanding laboratory facilities—On the credit side for 1949 may be listed, first, the Bacteriological Laboratory. The great advance of the sulfonamides and the antibiotics made good bacteriology a *must*. With Miss Mangiaracine as Bacteriologist, our laboratory is our pride and the envy of the associated hospitals. More than ever, the past year has demonstrated many times the importance of determining the sensitivity of organisms in the selection of the proper antibiotic.

For the past year, all chemical and tissue work has been done in our own Mosher Laboratory, with consultation service being rendered by the Massachusetts General Hospital. The Laboratory Resident spends three months in the laboratory. His duties are to be present at the operation, obtain the specimen, and follow it through to the final diagnosis. It is his duty, also, to see that the laboratory report reaches the patient's record. In addition, he attends the lectures and the afternoon classes at the Medical School during the postgraduate course.

Dr. Werner Mueller has made the laboratory function smoothly, while Miss Dorothy Linden, whose work continues to be of the highest quality, is now Laboratory Technician and devotes part of her time to research problems. For example, one of the causes of congenital deafness is German measles in the early months of pregnancy; two embryos from mothers with German measles have been sectioned and the internal ears studied.

Dr. George Keleman, continuing his study of the nasal cavities of laboratory animals, completed his work on rats and guinea pigs and will soon start on rabbits. Dr. Moses H. Lurie, in his study of deafness, is working on an evaluation of the effect of streptomycin on the organ of hearing.

Effectiveness of combined clinic—The wisdom of combining the Ear and Nose and Throat Clinics is yearly becoming more and more self-evident. The problems involving the ear are inseparable from those of the nose and throat. Delays encountered in referring an ear case from the Nose and Throat Clinic to the Ear Clinic and *vice versa* are avoided, while the patient is saved the time and cost of another referral. One physician handles the entire problem, just as he is expected to do in private practice.

As far as possible, the attending Oto-Laryngologist sees his own patients at each visit, so that he can more accurately judge the effectiveness of his treatment and follow the progress of the patient.

The Winthrop Foundation and the Clinic for the Deaf—The work of rehabilitation for the hard-of-hearing patient, begun as far back as 1940 and today financed in part through the generous interest of Mr. Frederic Winthrop, continued under the direction of Dr. Philip E. Meltzer, who has been relieved of his other duties and assigned as Surgeon in charge of the Winthrop Foundation and the Clinic for the Deaf since 1945. Dr. Bernard Zonderman is the newest member of the medical staff, working with Dr. Meltzer. In addition to the careful selection of cases for the fenestration operation and the exact evaluation of results, the education of preschool deaf children has been the biggest challenge in this work.

With all handicapped children there has always been an attempt to overcome the handicap by education. This, perhaps, is even more true with the deaf child, because it is essential for him to have certain types of training in order for him to be able to communicate with others. He, therefore, is apt to experience formal teaching much earlier than some other handicapped children, starting with speech and lip reading at age 3 and entering schools for the deaf at 4.

The present facilities for service to the deaf are: a) Diagnostic and treatment service geared to the deaf child; b) Psychometric testing, adapted to the handicap of deafness; c) Rehabilitation.

Speech and auditory training, which is given on an individual basis in the afternoon by three speech teachers trained in schools for the deaf, take individual children by special appointment. Until this year, this was the only speech training service offered to the hard-of-hearing child in Massachusetts outside of schools for the deaf.

Cancer rehabilitation — The loss of the larynx used to be considered a major tragedy, but today the surgeon's duty to the patient does not end with his surgery. For the past ten years, we have endeavored to rehabilitate the patient by teaching him to talk again, and for some years we have taught the so-called esophageal voice method of sound production. Our first instructor, Mr. Willard White, himself a laryngectomized patient, is now with the National Hospital for Speech Disorders in New York.

Five years ago, Mrs. Mary E. Doehler was unfortunate in having to undergo a laryngectomy for cancer of the larynx. Aided by her experience as a teacher, she soon became proficient in speaking again. Through a grant from the Massachusetts Division of the American Cancer Society, she devoted all her time this past year to teaching esophageal voice classes. Her pupils numbered 51, and came from all over the United States. Most of these patients do learn to talk again and are able to return to their former jobs.

LeRoy A. Schall, M.D.,
Chief of Oto-Laryngology

This is the time of year when the newest member of the MGH family starts preening herself for her annual theatre party. This will be the 58th year that The Vincent Club has put on a show to raise funds for the Vincent Memorial Hospital.

The Show, "Tonight at 8:30", will be held at New England Mutual Hall, where tickets will go on public sale March 13. You will find ticket applications and posters strategically located round the M.G.H. Prices range from $1.20 to $3.60, tax included. The Show opens Tuesday evening, March 28, and runs through Saturday evening, April 1. There will be a matinee on Saturday at 2:30.

Do plan to save one evening during the last week of March for the Vincent Show. You will be helping out a member of the hospital family and, incidentally, will have a lot of fun doing it.

The Board of Trustees, at their meetings on January 6 and 20, voted:

To accept with regret the resignation of Dr. Carl S. Sawyer from the position of Assistant in Dermatology;

To award Dr. Charles H. DuToit a Dalton Scholarship of $1,000 for the period Jan-

uary 1 through June 30, to do original investigation in the Thyroid Clinic;
To establish a new position, to be known as Assistant in Physical Medicine, and to appoint Dr. Thomas L. DeLorme to that position immediately;
That Dr. Earl G. Solomon's appointment on the Psychiatric Service shall be that of Resident rather than Assistant Resident, as of January 1.

To appoint:

Dr. Benjamin R. Clanton as Exchange Assistant Resident on the Children's Medical Service for the month of January;
Miss Dorothea B. Jones as Administrative Intern, beginning January 16;
Dr. David Kahn as First Assistant Resident in Pathology, beginning January 1;
Dr. Paul M. G. St. Aubin as Assistant Resident in Radiology, as of January 1, 1951;
Dr. Wilbur A. Thomas as First Assistant Resident in Pathology, beginning July 1;
Dr. Robert H. Walker as Second Assistant Resident in Pathology for one year, beginning July 1.

At their meetings on November 16 and 30, and January 11, 18, and 25, the General Executive Committee voted to appoint:

Dr. Bernard Bandler a Research Fellow in Psychiatry for six months, beginning February 1;
Dr. Joseph A. Boyd a Clinical Fellow in Radiology, beginning February 1;
Dr. Raymond Daley a Clinical and Research Fellow in Medicine for one year, beginning November 22, 1949;
Dr. John Dawson a Research and Clinical Fellow in Medicine, to work with Dr. Albright;
Dr. William Hander a Resident in Anesthesia for the month of March;
Dr. Rita M. Kelley a Clinical and Research Fellow in Medicine, as of November 1, 1949, to work with Dr. Aub;
Dr. Marie Lorenz a Clinical and Research Fellow in Psychiatry for one year, beginning July 1;
Dr. Arthur F. O'Keeffe a Clinical and Research Fellow in Surgery, from February 1 through June 30;
Dr. Richard J. Palmer a Clinical Assistant, assigned to Physical Medicine, from January 5 through April 30;
Dr. Gardner C. Quarton a Clinical and Research Fellow in Psychiatry, from July 1, 1950 through June 30, 1951;
Dr. David Stafford-Clark a Clinical Fellow in Psychiatry for six months, beginning January 1;
Dr. Eero H. Valanne a Clinical Fellow in Psychiatry, from February 1 through July 31.

The General Executive Committee also voted that Dr. Thornton Brown be authorized to act as Dr. Joseph S. Barr's assistant in the care of his Baker Memorial and Phillips House patients.

* * *

As is our custom when persons who are not subscribers are mentioned in THE NEWS, copies of the two issues containing the accounts of Sir Richard Fairey's visit as a patient at M.G.H. were sent to him. Immediately, by air mail, came his letter of thanks, with this final paragraph:

> I have always in mind not only the great skill that was brought to bear in my treatment at the Massachusetts General Hospital, but the unstinted kindness I received from all concerned.

* * *

PSYCHIATRIC OUT-PATIENT CLINIC

The Psychiatric Clinic was started in 1930 as a child guidance unit and part of the Neurological Clinic. It was staffed by members of the McLean Hospital Staff. Miss Sarah Evarts was the psychiatric social worker.

In 1934, when Dr. Cobb organized the Psychiatric Service, the clinic graduated from infancy and became an adult with its own name plate. Instead of being a part of the Neurological Clinic, having appointments in the morning, it became an important part of the Psychiatric Service to which patients came in the afternoon. The first chief was Dr. Frank Fremont-Smith. When he left to work for the Josiah Macy Foundation he was succeeded by Dr. Maurice Fremont-Smith. Miss Evarts was the chief psychiatric social worker until her death in 1939. Miss Dorothy Clark has been the clinic secretary since 1933. In 1938 Dr. Erich Lindemann became the chief and remained in this capacity until 1949 when he was succeeded by Dr. Henry H. Brewster.

While these changes in personnel have occurred, the number of staff psychiatrists working in the clinic has increased to about ten. Among the elders one thinks of Dr. Marianna Taylor and Dr. Vernon P. Williams. Many of the house staff do special work in the Out-Patient.

Child Psychiatry has been an activity of the clinic from the start. In 1934 Dr. Eleanor Pavenstedt was in charge of the Children's Division. The child psychiatrists who have worked in the clinic are Drs. Robert A. Young, Margaret R. Anthonisen, Florence Clothier, Lydia Dawes, Lucie J. Jessner, Marian Putnam, Gregory Rochlin, and Dorothy Macnaughton. In 1947 Child Psychiatry became a separate section of the Psychiatric Out-Patient Service under the leadership of Dr. Jessner, assisted by Dr. Samuel Kaplan and a group of clinical fellows.

Psychiatric Social Service has grown, under the successive leadership of Mrs. Louise Bandler, Mrs. Eunice F. Allan, and Miss Sylvia Perry, into a group of six full-time social workers, of whom half spend most of their time with the child psychiatry patients. This number has been gradually augmented by psychiatric social work graduate students who come for a year of training from Simmons College and Smith College School of Social Work.

The main function of the Psychiatric Clinic is service to the hospital. Since there is an endless number of patients with neurosis who might be referred from outside agencies and physicians, we have to make it a policy that the problems that arise in the wards of the hospital and in other departments of the Out-Patient Department are the first to receive our attention. We therefore have to be quite restricted in the number of outside references we are able to accept. We do not accept problems concerning feeble-mindedness, nor do we take in any patients with severe mental disorders who have behavior problems. These have to be looked after in the regular mental hospitals and cannot be treated on the Psychiatric Ward, because we have no license for the care of the so-called insane.

The patients we are most interested in treating are the psychosomatic problems, the anxiety states, hysteria, and reactive depressions.

Of late, the Psychiatric Clinic has received about 800 referrals a year, and there have been annually between 2,000 and 3,000 clinic visits made by the patients.

A further service to the hospital has been rendered by the participation of a member of the clinic staff in other clinics of the hospital. Dr. Lindemann worked for some time with Dr. Chester M. Jones in the Gastro-Intestinal Clinic, and from this activity developed his special interest in the subject of ulcerative colitis. Dr. Lindemann has also worked in the Adolescent Endocrine Clinic, where he has participated in a study of factors involving growth of nutritionally deficient children. Dr. Herbert Barry has worked in the Dermatology Clinic. Dr. Henry H. W. Miles works with patients with hypertension, and Dr. Cecil Mushatt has been a member of the Gastro-Intestinal Clinic. Dr. Harley C. Shands has worked with cancer patients.

The teaching function of the Psychiatric Clinic has always been a prominent one. Already mentioned are the students of psychiatric social work. In addition, there are the three four-year medical students who rotate through the clinic each month during the academic year and who receive instruction in the management of the neurotic patient, under the supervision of a senior staff psychiatrist. There are also clinical fellows, representing doctors and obtaining postgraduate psychiatric training, who treat patients in the clinic and receive individual instruction from a staff psychiatrist. The instruction of the psychiatric social workers is principally the function of the chief social worker and partly the function of the special conferences conducted by a staff psychiatrist.

In 1947 the teaching activity of the clinic was expanded to include students in clinical psychology from the Department of Social Relations at Harvard University. These students come for the purpose of observing and contributing to the methods of clinical diagnosis and clinical psychotherapeutic aims.

The final activity of the Psychiatric Clinic has been in the field of research. A constant subject of study for both psychiatrists and psychiatric social workers has been our methods of teaching. We are continually trying to better them and make them more intimate. The central idea is to give instruction in therapy, with close supervision. One of the results of Dr. Lindemann's work in the Gastro-Intestinal Clinic was his exposition of the psychiatric factors involved in ulcerative colitis, which followed on the heels of his investigation of normal and abnormal reactions to grief. Later, he participated in the study of emotional factors in nutritionally retarded children.

A survey was made by Dr. Avery D. Weisman of psychiatric factors in peptic ulcer. Dr. Miles has carefully examined patients with essential hypertension. Dr. Brewster's work on separation reaction has been the result of treatment of patients in the Psychiatric Clinic.

Henry H. Brewster, M.D.,
Head of Psychiatric Clinic

BIOGLET

Dr. Robert B. Dodd, Assistant Resident in Anesthesia — born in Fairbury, Nebraska, April 12, 1921; University of Chicago, 1939-40; University of Nebraska, 1941; M.D., University of Nebraska, 1945; Intern, Research and Educational Hospitals (University of Illinois), Chicago; U. S. Army: Fitzsimons General Hospital, Denver, Colorado, 1946-48; Anesthetist, Columbia Hospital, Milwaukee, Wisconsin, 1948-49; married, 1949.

An absence from the medical house staff for three or four years gives the returning resident a perspective that promotes an almost anthropological interest in the recent professional recruits.

The habitus of the race has not changed appreciably: they are still white-suited, pockets bulge with pretty old-fashioned paraphernalia, neckties of variegated description (the violent character of some is not a local phenomenon) still hold in approximation the gaping, unironed ends of hospital shirts that must have originated many generations ago, faces are still clean-shaven (save for the occasional adornment of the upper lip) — and yet there is a difference in general appearance due to the remarkable effect of the war in reducing the age of medical school graduates. In general, the present intern is no more than 24, and his resident (in the third year of his training) may be the same age. How can such immaturity be consonant with good medical practice? It's hard to explain, but the fact is that the practice of medicine on the wards is of a very high level. This youthful complexion won't continue, of course, for the oncoming group of fourth year students is made up of many men already in their 30's. Thus, the entertaining situation will soon appear in which an intern will be supervised almost entirely by men many years his junior.

The language of medicine has not changed, either, in its essential respects, but there has been a considerable shift in the particulars of it. Patients are no longer given digitalis, they are *digitalized.* That's not such a new expression, either, but patients are also *dicoumaralized, phlebotomized, dialyzed* (on the artificial kidney), *I-V'd, threaded* (proctoscoped), and *digitalized* (given a rectal exam).

The day-to-day behavior of these people presents no major innovations. They are usually to be found in the Nurses' Dining Room (the Doctors' Dining Room is open only at noon now) from 7:30 A.M. on. There is a small overlap with the surgeons, most of whom have fled prior to this hour. There is then a good deal of blood-letting in the half hour before the business rounds begin at 8:30. These early rounds represent a concentrate of quick reviews of individual patients, student teaching, and physical diagnosis in some instances. The last threatens to be reduced to such an extent that clinicians trained in the classical tradition would be shocked and dismayed. This decline of the stethoscope can be traced partly to Sosmanian influences which are responsible for a readiness to lean too heavily on laboratory procedures.

Following these rounds, and in the 1½ hour interim before the visit arrives, the laboratory has its field day. One of the house staff must be armed for an expedition to the X-ray Department, where he will pick up the previous day's films, have them interpreted, and hope to return in time for the visit. The rest of the staff (including one to three fourth year students) will busy themselves with urines and stools (which continue to be regarded with interest) and with blood counts and gastric analyses. In spite of such a catholic range of laboratory activities, all others dwindle in significance compared to the *eosinophile count.* The latter has a holy aura about it, and the gleam that comes into the enthusiast's eye can be compared only with his reaction to the blood *potassium.* Indeed, one finds that whatever morbid processes cannot be explained by an elevated serum potassium, can be explained by a depressed serum potassium. Or, in regard to the eosinophile count, whatever illness is not due to too much ACTH is due to too little ACTH. This great simplification in pathological physiology has superseded that in vogue four or five years ago which dealt largely with relations between the psyche and soma.

When the visit arrives at 11 A.M., chances are he will take up the new cases in some place remote from the ward (such as the lab), and that his actual physical presence on the ward will be of short duration. The informality of rounds results in a much easier give-and-take among students, house staff, and visit, but it also makes for a loss in the enforced orderliness of thought and presentation that came with the formality of the traditional type of ward rounds. One day a week the visit is partly given over to a conference with the social service worker responsible for the ward, and it is not uncommon to have a dietitian on rounds.

The spectrum of diseases represented by the patients on the ward is a very different one from that found even a few years ago. The average patient age is well-advanced, and there are astonishing numbers of patients with malignant disease or myocardial infection. The flurry of barbiturate poisonings of the war years has decreased to an occasional mild intoxication. The neurosurgical methods for solving general medical problems (i.e., sympathectomy for hypertension, vagectomy for duodenal ulcer) have been very much curtailed. On the other hand, the glorious choice of antibiotics now available has made medical men a little heady, but one hopes they will not often stoop to the shotgun tactics still practised here and there.

While the rounds are in progress, an aliquot of the house staff is assigned to the Out-Patient Department. With the expansion of the house and visiting staffs following the end of the war, and with the increase in clinic fees, the ratio of doctors to patients has been greatly increased, so that the hectic days when the desk resident saw 30 to 60 patients have quite vanished. It is a real loss, for now nowhere in the hospital is the house staff pushed so inexorably that they must make rapid, decisive judgments.

What happens to the house staff in the part of the day after the visit's rounds cannot have changed much in recent years, but there is a significant difference in their off-duty life. Many of them now have families, and even the attractions of the Savoy are not enough to tempt them from the hearth of home.

Robert L. Berg, M.D.,
Chief Resident in Medicine

The Distaff Club will meet in the Nursing Supervisors' Dining Room on Wednesday, March 8, at 8 P.M. If there are any new interns' or residents' wives whom we have not yet reached, we want them to know they will be heartily welcomed. Hazel Craige and Jean Stanbury will be hostesses, and the program is to be a surprise.

Revised election results have given the Distaff Club the following Executive Committee for the year: President, Pearl West; Vice-President, Dorothy Nielsen; Corresponding Secretary, Ena Stiff; File Secretary, Enis Martin; Treasurer, Ethel Wyngaarden.

New addresses:—

Dr. Arlington Bensel (*clin. fel. D*), 8 Bunny Circle, Newton, Mass.
Capt. William E. Eaton, MC, USN (*D* 1907), 1407 37th St. NW., Washington 7, D. C.
Dr. John S. Harter (*WS* 1935), 1010 Heyburn Bldg., Louisville, Ky.
Comdr. William J. James, MC, USN (*r. NS* 1949), U. S. Naval Hospital, St. Albans, N. Y.
Dr. Agustin L. Roque (*res. fel. P*), 14 Buswell St., Boston 15, Mass.
Dr. Carl S. Sawyer (*r.p. D* 1943), 41 Plymouth Road, East Providence 14, R. I.
Dr. Donald N. Sweeny, Jr. (*WS* 1941), Riverside Clinic, 8445 East Jefferson Ave., Detroit 14, Mich.
Dr. William J. Turtle (*assoc. p. CM*), 1180 Beacon St., Brookline 46, Mass.

MASSACHUSETTS EYE & EAR INFIRMARY

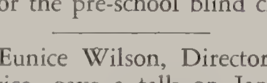
The Annual Meeting of the New England Oto-Laryngological Society was held at the Infirmary on February 15. The morning Clinical Meeting was presided over by Dr. LeRoy A. Schall, Chief of Oto-Laryngology; and Dr. Lyman G. Richards, Surgeon in Oto-Laryngology on the Infirmary staff and President of the Society, presided over the afternoon meeting, which included the following papers: "Arterio-venous aneurysm in the cavernous sinus", by Dr. Louis M. Freedman; "Cyst of the esophagus — Report of a case", by Dr. Morris Swartz; "Thyroglossal duct cysts", by Dr. N. Edward Nachlas; "Evaluation of surgery in the treatment of Ménière's syndrome", by Dr. Frank D. Lathrop; "Winthrop Foundation activities — Management of the pre-school deaf child", by Dr. Philip E. Meltzer, Dr. Donald K. Lewis, Miss Helen Patton, and Miss Madelaine Shipsey; "Resection of an unusually large tumor of the mandible and repair of the deformity", by Dr. Varaztad H. Kazanjian.

Dr. Frederic C. Merriam of the Howe Laboratory read a paper, "Synthesis of glutathione in the normal and cataractous lens", before the Association for Research in Ophthalmology at the Lenox Hill Hospital, New York City, on January 28. The paper was prepared by Dr. Merriam and Dr. V. Everett Kinsey.

Miss Pauline Moore, pre-school teacher in the Retrolental Fibroplasia Project, talked to the Harvard Class at Perkins Institution, February 18, on "Educational service for the pre-school blind child".

Mrs. Eunice Wilson, Director of Social Service, gave a talk on January 23 at the Monday Lunch Club. Her subject was "Casework services for pre-school children and their parents who have either a hearing or visual loss".

Dr. Donald Chickering, Fellow in Ophthalmic Pathology, has accepted a residency in Ophthalmology, to begin April 1 at the Lakeside Hospital, Cleveland, Ohio



Brief bits:—

Dr. Erwin C. Miller (*EM* 1926) has been elected Chief of the Medical Services at the Memorial Hospital of Worcester, Mass. Dr. Miller says they now have 300 beds at the Memorial, and several of the active staff are MGH alumni.

Dr. Judson A. Smith, Obstetrician on our staff, has returned from spending an annual vacation in Peru. He says he finds that Obstetrics in South America is vastly different from that in Boston.

Here is one of the most interesting letters we have ever published — that long-promised one from Dr. Russell T. Congdon (*WS* 1909). In his accompanying note Dr. Congdon says, "I am submitting this letter with the feeling that in my enthusiasm I have made it much too long." It seems to us that, far from having written too much, nothing could be more exciting than to sit down with Dr. Congdon and let him talk for an entire evening. What stories he could unfold! But here is his letter:

At the suggestion of the Editor of The News, I will tell you a little about the interesting things which have caught up with me since I left the Massachusetts General Hospital in 1909. To many of you that seems a long time ago, but the events and associations of those fruitful hospital years remain ever fresh in my memory. What a privilege it was to serve under such men as S. J. Mixter, Maurice Richardson, Franklin Balch, G. W. W. Brewster, Hugh Cabot, and others of that period! Neither do I forget Dr. Holmes in the X-ray Department, nor the brave Walter Dodd.

Coming west, I arrived in Seattle and found temporary work with the State Board of Health, which kept me busy until the time arrived for taking the state board examinations for license to practise. This work—investigating the causes of typhoid prevalence in irrigated districts — brought me to Wenatchee in October. My first impression was that it was a rather raw western town, but after a short stay I was so impressed with its prospects for development and the fine spirit of its citizens, that I decided to make it my home.

My first year's experiences were typically those of the horse and buggy period, with long drives to neighboring settlements, and emergency operations done in the home, on the kitchen or dining room table. There being no hospital in the town, arrangements were made to rent a suitably located room and to have a nurse made ready when occasion arose. The circumstances of our first operation in this room reminded me of the story of Ephraim McDowell. I had driven a team of western ponies twenty miles up river to see a rancher's wife. The husband, coming to town to summon me, said, "She is swollen up like a nine-months' pregnancy." Arriving at the home, it was apparent that she was suffering with an ovarian cyst with twisted pedicle. The husband would not give his consent for operation, but finally agreed to her coming to town for observation. She was brought down by river steamer and "hospitalized". Soon after arrival she made it plain that "she was the sufferer, not her man" and that she wished us to proceed with the operation without awaiting his consent. Next morning, just as the darkly cyanotic cyst was being delivered from the abdomen, the door opened and the husband entered the room! His words were, "Well, I guess she needed the operation."

One of the more distant emergencies took me down into the deep gorge of the Columbia, where the river is hemmed in by towering walls of basalt. The local doctor met me at the railroad station with his model T and we drove to the edge of the plateau above the river. From here we hiked down the trail to the lone settler's cabin on the bar. The patient, a young lad, had empyema, and since there was no way to move him, a rib resection was done in the little cabin room. This accomplished and the boy's condition satisfactory, I became interested in an array of stone-age implements, mortars, pestles, and other relics of early Indian habitation which the family had gathered. The Columbia is an ancient highway of the aboriginal races. Indian tribes had had their villages along its margins, and traces of these settlements remained. My interest in these early races was aroused and, as time passed, many week-end exploring trips were made along the great river. My older son, Russell, became an enthusiastic "archeologist" and companion on these explorations. We excavated many ancient burials, and the skeletons, well preserved in the dry sandy soil, began to tell us of the diseases and traumata which the braves and squaws endured. There were fractures of the skull and arm and leg bones, osteomyelitis, tuberculosis of the spine, and many cases of osteo-arthritis of the spine.

Most interesting to us was the occasional finding of a lumbar vertebra with a separated posterior arch, usually the fifth L. This condition had been described in orthopedic literature as fracture of the lamina (Russell Hibbs). In some of these spines with the separation of the arch, there was a definite spondylolisthesis. We collected quite a group of these defective spines and then, one day, discovery! Excavating a burial, we uncovered a beautiful specimen with not only the fifth lumbar presenting this separation of the posterior arch, but the two upper sacral segments also showed this defect! There before our eyes was perfect evidence that this defect was not a fracture, as was commonly accepted, but a congenital defect. Careful examination and comparison with our previously discovered specimens confirmed this view. That this same opinion had been reached by Willis of Western Reserve did not detract from our thrill of discovery, for we had overlooked his article. Thus, our interest in back lesions was stimulated. This early contact with bone lesions in tangible form made a strong impression on my sons, which carried through student days and has resulted in their having a special interest in orthopedic and fracture surgery.

As the increasing need for hospitals became apparent, public-spirited citizens got behind a movement initiated by the local profession, and hospital construction has kept pace with the growth of the community.

The variety of conditions and the number of unusual cases one is presented with, in a relatively small center, has been surprising. This has had a stimulating influence that has resulted in an enduring enthusiasm for the work. To illustrate, I will mention briefly a very few of the unusual cases. A boy of three years had complete absence of both tibia, with resulting inversion of the feet. The talipes was corrected by inserting grafts from the femora. Following this, there was some development of bone in the region of the tibial cartilages, but progressive increase in length of the leg did not occur. Following this boy to full manhood was a most interesting experience.

One year there was an "epidemic" of coin swallowing by infants — the coin, usually a penny or nickel, lodging in the esophagus near the level of the sternal notch. In one of these, the coin had become so imbedded after five days, that the throat specialist was unable to remove it with an esophagoscope operation was resorted to and the coin successfully removed. Dr. Cheever, in a very old report of the Boston City Hospital, describes a similar case. He states that the monetary recompense he received was the coin he removed. In that respect our case was an identical one. Many of these charity cases, however, pay big returns in interest and satisfaction. Since the war, my sons have been working with me, which, of course, is an added joy.

It has been a great pleasure to meet men from H.M.S. and M.G.H. from time to time. Attendance at medical meetings and an occasional trip back to Boston have made this possible. One summer, after lecturing at our Pacific Northwest Medical Association meeting in Spokane, Dr. Walter Cannon and Mrs. Cannon spent a week with us and we all enjoyed cruising Lake Chelan in our yawl, *Holiday*. The steering cable parted while we were sailing in a stiff wind, but that did not bother Mrs. Cannon in the least. She even made the helpful suggestion that we fasten the loose end of the cable to the boathook for leverage in steering, which we did with beneficial results.

A year ago last October, I attended the meeting of the American College of Surgeons in Los Angeles. With Dr. Allen presiding, Henry Marble delivering the fracture oration, and Dr. Meigs and Dr. Goss on the program, it was almost like a visit to the M.G.H. Enjoyable visits with Henry Marble, a friend of hospital days, brought me up to date on the fellows of our period. At the Harvard Club dinner, I had the good fortune to have Joe Meigs as a dinner companion. He was the speaker of the evening and gave us an interesting report on developments in Boston hospitals.

Time and distance have not lessened the high regard in which I hold our hospital, and I always experience a thrill when, on visiting surgeries in Seattle and California hospitals, the operator calls for a "Richardson retractor" or a "Mixter forcep".

In closing I would like to extend greetings to all, with a hearty hello to Byam [Hollings], Oliver [Lothrop], the two Georges [Sheahan and Smith], and the rest of the family who dwelt in the Flat and did "rotating" service.

This note holds special interest for many who served with the 6th General Hospital during the war. It is from Jacob Schiffman, who was the MAC officer with the 6th General for over two years in Italy. The note was sent to Dr. T. Stewart Hamilton, who passed it on to us. It bears the address: c/o Nelson, Via Monte Faraone #7, Rome, Italy.

It seems strange to me, too; but I decided to come back here to study music.

Have been out to Buon Pastore. It looks awfully dismal these days, with half of it occupied by severe cases of tuberculosis (males) and the other half, at the left on entering, barred up again with nuns in charge of wayward girls (as originally).

Think of you folks often. Hope all is well with you and our mutual friends.

Dr. Robbins has very kindly passed on to us this letter from Dr. Frank Y. Leaver (*clin. fel. R* 1948).

I think it is about time I made a report on my activities since leaving Boston. I shall always feel indebted to you and your staff for the year's training at Massachusetts General which has meant so much to me, not only in training and experience, but assignment and prestige, as well. Yes, the Massachusetts General Hospital is a good place to be from, and I thank you again.

Since December 1, 1948 I have been Chief of the Radiology Department here at Fitzsimons General Hospital, without any help except nine residents (3 first year, 4 second year, and 2 third year men). The following will give you an idea of the work load:

Diagnostic procedures		58,329
Radiographic	56,005	
Fluoroscopic	2,324	
Therapy treatments		5,096
Superficial	1,331	
Deep	3,352	
Radium	413	

The training schedule for residents is quite strenuous. All the residents are registered at the University of Colorado Medical School and are working for Masters degrees. I have been appointed Assistant Professor of Clinical Radiology at the University and given the following scheduled classes as part of the hospital and school training program: Monday, 1 – 3 and 7 – 9 P.M.; Tuesday, 1 – 2 P.M.; Thursday, 7 – 9 P.M.

In addition, there are classes of some kind or another going on at all hours of the day, in many of which I am called up to represent the Radiology Department. Also, each service (GI, Neurology, ENT, Cardiology, Chest, Orthopedics, Medicine, etc.) requires a course in Radiology for its particular specialty. I also personally present all cases to the tumor board which lasts from 1 to 5 on Fridays. The rest of the time I spend running back and forth between the diagnostic and therapy sections.

We now have two Sholz spot film devices which are really kept busy. The equipment is practically all General Electric and consists of: 5 diagnostic machines, 500 M.A., rotating anode; 2 cystoscopic tables; 1 Keiffer Laminagraph (Kelley Koett); 2 fluoroscopes; 3 bedside units; 1 deep therapy unit, G.E., Maximar 250 KV; 2 superficial therapy units (1 G.E. KX 10 140 KV and 1 Picker Zephyr 120 KV).

The radium now consists of 312.5 mgms in the form of 1 cm cells in the following strength: 0.5 mg, 0.75 mg, 3.33 mg, 5 mg, 10 mg. The cells can be inserted or removed from the needles which are of varying lengths to hold 1 to 4 cells. We have a number of Colpostats and prefer the Earnst. The radium is inserted by the Radiology Department and not by the surgeon or gynecologist, and we do have quite a few cases.

I understand we are the only institution in Denver approved for therapy (roentgen and radium), therefore I am training some civilian residents to help the University and the Veterans Bureau. So you can see that the nights I do not have classes I spend preparing teaching material and lectures. The courses on Radiation Physics, fortunately, are given by a physics professor at the School.

For angiocardiography we have a Fairchild camera (obtained from the Air Corps) mounted on a Phillips Pedestal Bucky frame, which will take 12 exposures in 10 seconds and works all right until we can get a regular Fairchild set-up.

The hospital patients number between 1700 and 2400, with an active Out-Patient Service. The clinical material is abundant and varied. We are short on pediatrics and neurology, but the University Hospital and the Veterans Bureau help us in these fields.

We have four Civilian Consultants who help in the training program — Drs. Kenneth Allen, John Bouslog, Paul Weeks, and Morris Levine. I understand that Dr. Bouslog is the new President-elect of the Radiological Society of North America. The hospital staff is represented by many of my old friends from previous assignments and there is excellent cooperation between services, which makes the work really enjoyable.

We have very nice quarters on the Post, within short walking distance from the hospital. Bob finishes high school this year and plans on starting a premedical course at the University of Colorado next year.

Haven't heard a word from Vinson or Isherwood. Talked to Alexander Hoff on the telephone a few months ago as he was passing through Denver *en route* to Washington. He feels that nowhere can compare with Boston and vicinity, but did admit that Tripler General and Honolulu were pretty nice.

We appreciated your Christmas card. We also received cards from the Wymans, Hanlens, McCorts, Eylers, and Muellers. The new addition to the McCort family came as quite a surprise.

Please give my regards to all the Staff.

The last time we heard from Dr. William J. Tobin (*Or.* 1939) he was just back from an inspection of the U.S. Army hospitals in Germany and Austria. This letter, recently received, tells us of a fascinating survey which Dr. Tobin is now carrying on.

All is well in Washington. The Interim Session of the American Medical Association was held here in December, and I had the opportunity of seeing a number of my old friends from Boston.

For some time I have been interested in a study of the bone diseases that existed in the early civilizations. Through the cooperation of the Smithsonian Institute, I have had the opportunity to study specimens found among the ruins of the early American groups of people. There are many fascinating aspects to this study and it will take me years to complete the survey. I am hoping, as time goes on, to gather together sufficient material to justify a report on the findings.

I always enjoy reading THE NEWS. In this way I can keep in touch with so many of my friends of years ago.

Here is one instance when going into the red paid off — it brought this "first" from Dr. Walter R. MacLaren (*CM* 1939). The letter, headed 1025 North Madison Avenue, Pasadena 6, California, is such a nice chatty one — just the kind we are delighted to receive.

The postscript in red at the bottom of your kind letter requesting some biographical material has had the effect we hope similar notes will have on our delinquent clients. The contrast is striking enough to produce some activity.

Both Mrs. MacLaren and I read each issue of THE NEWS with interest; and though most of the reporting is personal, one gains a real feeling of the physical continuity and expanding activity of the hospital. We search first for new addresses, which may mean old friends are in this area unknown to us. Then, I suppose I scan the appointments, which announce the stages in the careers of friends, and by which even the course of whole departments can be followed! The number of people attached to the Children's Department has grown astonishingly, to mention only one instance. Then, the letters, the department reports, and other material.

We have become completely acclimated Californians, of the Pasadena variety, which are peculiar mainly for lingering Republicanism, objection to taxation, and distress at the pressure for socialism. Having been here since 1943 practically entitles us to the status of Old Settlers, and we find ourselves complaining about the way these new settlers are spoiling the place. Of our five children, four are native Californians, and the first missed it by only a little.

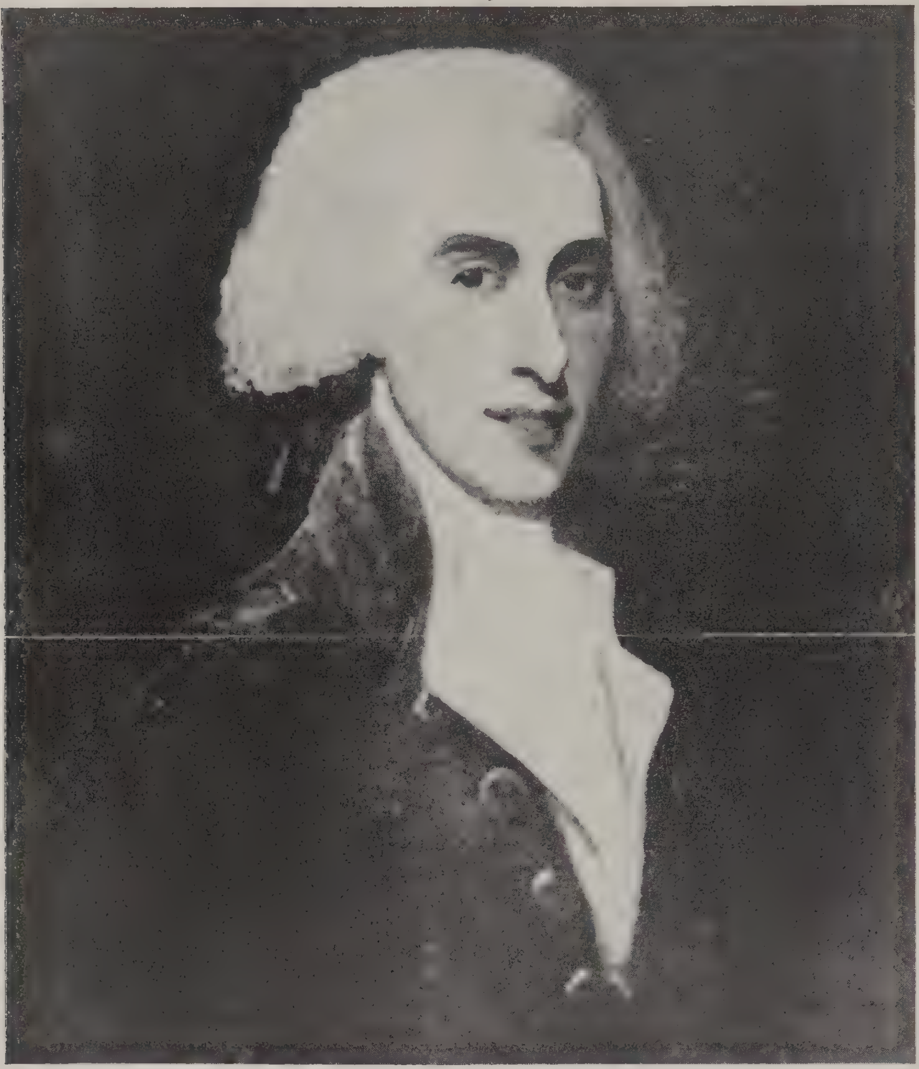
Of war experience I have little to relate, having spent the time at Lockheed in "aeromedical research". There I struggled with an altitude chamber and busy engineers who did not believe in physiology. I think it safe to say that not one single nut or bolt was ever altered in Mr. Grosse's aircraft as the result of my four-years' battle for the human factor in aircraft design. Something of a record in futility, I imagine. However, I believe everyone, and particularly those of us who have lived rather sheltered academic lives, should be exposed for a while to a mass production industry. This is the really distinctive social organism of our time.

Acquaintance with industrial medicine led to a short experience with a medical group taking care of airline pilots just after the war, but this did not last long because, as you may recall, the major airlines overexpanded and lost vast sums of money. Medical Service was the first thing curtailed. This was enough of a lesson.

Previously I had been impressed with the number of asthmatic individuals in Southern California — and so many of them children. The results of routine treatment were scarcely satisfactory and I felt it would do no harm to learn something of this condition. Accordingly, I arranged locally for postgraduate work in allergy and in 1947 opened an office in Pasadena. My colleagues have been very helpful and the office is now a going concern.

Among the MGH alumni whom I encounter frequently are Bob Gentry [*ES* 1943], who has established himself well here in general and thoracic surgery, and Dick Cosby [*EM* 1940], cardiologist and teacher. Theodore Erler and Ed Evans, H.M.S., are also here.

Last year Henry N. Russell, Jr. [*CM* 1939]



Charles Bulfinch, Architect, 1763-1844
from a portrait by Mather Brown, painted in 1786

spent a week with us while he was on vacation from the medical group with which he works in Greely, Colorado. And last fall we had a very pleasant visit from Bill Chapman, who was making a west coast tour scouting for talent. It would not do to omit mentioning Dr. Chester Jones's trip here for the California Medical Association Meeting. He discussed gastro-intestinal allergy, and I think hit the mark with his statement that most cases of ulcerative colitis are "allergic" only to life's problems.

One could go on at great length about the local scene — personal, political, medical— for it is an expanding society, with much of the spirit of adventure still in evidence. Both *Life* and *Holiday* magazines have given Los Angeles a whirl in the past year, and they were not far off in the picture they presented.

More than three years had passed since we were treated to the last real letter from Dr. R. Earle Glendy (*r.p.* 1934). This one, just received, makes interesting reading for all of us.

We have just finished our fourth year in Roanoke, and though we are happy to be in The Old Dominion we still miss the many pleasant associations in Boston — especially at the M.G.H.

I am enjoying a busy practice in Internal Medicine — the greatest part of which is in the field of cardiovascular disease, and find to my surprise that the incidence of rheumatic heart disease is much greater in this climate than we have been led to believe. One reason for this, I believe, has been lack of adequate studies of the relative and absolute incidence of heart disease in this locality, which I hope to make some day when sufficient material is available.

We have a 2000-bed Veterans' Hospital in the vicinity of Roanoke, and I find my work there as Consultant in Internal Medicine stimulating and worth while. Hospital facilities here are crowded, as they seem to be everywhere, and we are now engaged in a fund-raising campaign to enlarge them. The chief problem we have in making our medical community complete is in obtaining the services of a well-trained pathologist. Most of them seem to prefer the academic life at medical schools and large medical centers, and yet there is a great opportunity in the smaller centers of population for such men, not only to improve the general over-all quality of medical care through accurate clinical-pathological correlation but to earn better than average "academic" incomes. If any young pathologist with good credentials should by chance read these lines and have any interest in settling in Southwestern Virginia, in the best year-round climate in the U. S. (free from hurricanes, floods, tornadoes, and other violent catastrophes of nature), please let me hear from him.

Margaret (Moriarty) Glendy is not engaged in private practice, but continues an active interest in medicine and is currently in charge of two rheumatic fever clinics in Roanoke and Radford, Virginia, which are part of a state program to expand the facilities for the care of rheumatic fever and rheumatic heart disease. She has also been active during the polio seasons, through an association with the health department — especially two summers ago when the large epidemic occurred in North Carolina and to a less extent in Virginia. In her spare time she mothers our three children — two boys and a girl, now fifteen, thirteen, and eight; is engaged in numerous civic and non-civic enterprises; and is the proud nurserywoman of four outdoor camellia plants, despite advices to the effect that they just won't blossom in the dead of winter in this mountainous region. She will not like it when I tell you that last winter one of her cherished blossoms which was finally allowed to see the light of day, so that it might burst forth in all its glory for exhibition at her garden club, was torn to shreds by five small cocker spaniel puppies it happened to be our misfortune to have on our hands at the time. The mere mention of it is still painful to her.

In traveling south, a number of our friends from Boston have stopped off to see us. We sincerely hope that more of them will come this way, and we extend a cordial invitation to them to visit us at 116 Mountain Avenue, SE., Orchard Hill, Virginia.

A family sort of letter—the kind we all like best—has come from Dr. Sedgwick Mead (*EM* 1940, *P* 1941, & *a.r.p. N* 1942). He writes:

The Meads came to St. Louis two years ago, departing from Massachusetts in that historic blizzard and driving through New York City amid scenes of appalling desolation. With many a pang we said good-by to the hospital we both had known for so many years. By now we have made many new associations and friends, and have bought a home which we love very much.

At the time of my coming to Washington University on a full-time basis as Assistant Professor of Physical Medicine, a new division was created in the School of Medicine called the Division of Physical Medicine, of which I am the head. The growth of this division in two short years has been quite remarkable. Besides the Physical Medicine Clinic, which services both in- and out-patients in the Medical Center, we have a School of Physical and Occupational Therapy. Each requires two years of college preparation for admission and each confers a degree. In October our staff was joined by Dr. Alex Harell, who is both a physiatrist and orthopedist, and starting January 1 we have had a resident. We have an active research program, and opened a laboratory of clinical electromyography in January. We have exhibited at several meetings of the American Medical Association in the scientific exhibit section, and at other medical conventions, as well. Our list of scientific publications is growing rapidly. The reception by the staff members of Barnes Hospital and neighboring hospitals of the Medical Center, and by the officials of the medical faculty, has been most encouraging.

St. Louis is a very friendly city and one with many intellectual groups. Its symphony, art museum, and zoo are justly famous. I am a member of the central civic planning body, called the Social Planning Council, which has a very broad influence in all activities concerning health, the hospital's welfare, etc.

Our Medical Center enjoys the advantage of having the medical school buildings and clinical facilities all closely juxtaposed. The case method of teaching is preferred to a formal series of lectures. A group of enthusiastic young men, under Barry Wood, do a first-rate job on the medical service. Our C. P. C.'s are published monthly in the *American Journal of Medicine.*

A few weeks ago we had as dinner guests Dr. and Mrs. Comte of Casablanca. Dr. Comte will be remembered by members of the 6th General Hospital as a frequent and cordial host during our stay in Casablanca. I frequently see Bob O'Brien [*Or.* 1941] who has recently been made Professor of Orthopedics at St. Louis University and is doing a very fine job.

My family consists of Mrs. Mead, two boys —Sedgwick, age 7, and Marshall, age 3, and myself. We plan to visit M.G.H. late next summer on the occasion of the American Congress of Physical Medicine meeting at the Statler Hotel.

I hope that any MGH friends who pass through St. Louis will stop with us. Addresses are: office, 600 South Kingshighway, St. Louis 10; and home, 690 North Forest Avenue, Webster Groves 19, Missouri.

THE NEWS

No. 89 Boston, Mass. April 1950

McLEAN HOSPITAL

We of McLean Hospital are proud of this opportunity to tell a little about the hospital which, though more or less of a country cousin, is nevertheless a full-fledged department of the general hospital. In fact, though many people do not even realize that McLean is a part of the Massachusetts General Hospital, it is interesting to note that patients were admitted to the McLean Asylum in Somerville several years before the first patients were admitted to the general hospital.

At this time we would like to extend our welcome to Dr. Dean A. Clark who has joined the hospital family. His interest in Mental Disease will do much to bring McLean and the General Hospital even closer together.

The policy of the founders and the Board of Trustees of McLean Hospital has always been never to refuse the admission of patients because of race, creed, or color, nor has any patient ever been refused admission or been discharged because of lack of funds.

The hospital is approved by the American Medical Association for resident training, and is also approved by the American College of Surgeons and the American Psychiatric Association.

During the year 1949, 283 patients were admitted and 291 were discharged. Of the number discharged, 51 were without psychosis and 187 were recovered or improved.

McLean is fortunate in having many assets which allow its patients to be given personalized dynamic hospital treatment. Thus, by meeting the personality needs of each maladjusted person, by treating him through the day and night of a hospital community, and preparing him to re-enter his social community, the hospital is able to go even beyond the dramatic results achieved by physiological, medical, and nutritional treatment, or by electric shock, lobotomy, and insulin.

The majority of patients admitted to McLean can be rehabilitated to their regular life situations. Most of them have entered voluntarily and almost all can stay a sufficient length of time to be helped.

The hospital is most fortunate in its small patient load per physician and in the splendid support of the nursing staff and the various therapeutic departments. Excellent physical facilities are afforded, providing individual rooms and adequate opportunities for a variety of occupations in the way of sports and social activities. Seasonal sports are encouraged by the attractive grounds of the hospital—golf and tennis in the summer; skating, skiing, and sleigh-riding during the winter. The social activities include weekly musicals and open house in the Women's Occupational Therapy Department on holidays and Saturday afternoons, as well as weekly teas and bridge parties in the Library. During the winter the social program also includes moving pictures and dances.

The music department, under its able director, has brought much happiness to the patients through individual instruction, as well as through varied musical programs offered during the year.

Two other very important departments, contributing greatly to the social life of the patients and offering their facilities to the personnel as well, are the Beauty Salon and the Coffee Shop.

The amount of individual care allows expression of each patient's preferences and interests, precluding any feeling of being completely dominated by the regimentation of an institution. Individual freedom and responsibility are offered as soon as a patient is ready, starting with freedom of the hospital grounds and progressing to visiting, and even working, outside the hospital.

Psychotherapy is one of the main functions of the hospital. Generally, it involves prolonged listening to rational as well as to very ill patients, sensitive appreciation of the patient's feelings, development of patient-physician relationship, evaluation of the situation, proper timing of comments and advice, and the intelligent use of imagination and common sense.

McLean is most fortunate in having a Staff well-steeped in the tradition of recognizing the patient as an individual. Thus, the process of self-expression and growth go on throughout the day. Nurses, occupational therapy and physical therapy workers, and other personnel are guided by an attitude of kindness and recognition for the patient. Thus, there is a strong and endless intra-staff communication about the patient which is very vital.

The medical and physical care of the patients is carefully handled by physical examinations, routine medical consultations as well as surgical and other specialty consultations, clinical laboratory tests, X-rays, electrocardiograms, electroencephalograms, basal metabolism tests, Dental Clinic, Pharmacy, Diet Kitchen for supplementary vitamins and nutrition, and by the use of electric shock, insulin treatments, and hormones. During 1949, 16 major operations and 14 minor operations were performed in the operating room. One of the most important factors in the physical health of the patients is the careful and general nursing they receive, almost entirely without the use of special nurses and the additional expense to the patients.

The physical health of the employees is carefully followed in the clinic, on the wards, and at the general hospital.

Teaching activities along various lines are carried on. Resident physicians are trained. There are biweekly staff conferences, triweekly conferences in psychotherapy, and four to five weekly conferences in practical problems of administration. Opportunity is afforded to attend postgraduate seminars in Neurology and Psychiatry given by the Department of Mental Health, and to obtain training in Psychoanalysis at the Boston Psychoanalytic Society and Institute. Monthly lectures are given from the McLean Scientific Research Laboratory on biochemical problems, and from the Laboratory of Clinical Physiology on the physiological elements in Mental Disease. Lectures on Psychology have been started, as well as a course in Neuro-anatomy and Pathology for residents and seniors.

We are deeply indebted to Dr. Stanley Cobb for his guidance and consultations, and for the opportunity afforded our residents to work in the Psychiatric Out-Patient Department at the Massachusetts General Hospital and to attend the staff conferences of the Psychiatric Department.

Attendance at meetings of psychiatric societies is encouraged; and courses, clinics, and conferences are given for students of the McLean School of Nursing, as well as instruction for some of the Harvard Medical students who come for a month's residence in Psychiatry.

Several members of the Staff and Nursing Department are active in state and national organizations; and the Director has been an active participant in various medical and hospital association affairs, as well as in community and welfare organizations.

Research activities have centered in the Scientific Research Laboratory and the Laboratory of Clinical Physiology. Continuation of this basic research is vital to the ability of the hospital to care for present and future patients.

From this brief outline of the aims and activities of McLean Hospital we hope we have presented a picture of what we are trying to do for patients with mental illness at this century-old institution.

W. Franklin Wood, M.D.,
Director of McLean Hospital

Dr. and Mrs. Faxon have returned from Europe. We hope to have something about their trip from Dr. Faxon soon.

A Flower Shop, sponsored by the School of Nursing and located in the corridor near the General Store, was opened on March 7. If you haven't yet visited it, you should, if for no other reason than to see how a rather cold and barren spot has been transformed into an oasis of sheer beauty.

But there is a more important reason why all of us who can should patronize the shop. You see, nurses know very well the value of flower therapy (as do all of us who have been cheered by flowers when we've been ill), and they decided that something should be done to make it possible for visitors to ward patients to buy flowers. Also, there are many ward patients who never have visitors and never have flowers. The hospital has not been able to supply flowers for these lonely ones, but the nurses believed that their Flower Shop idea could remedy that regrettable situation. They knew they would not be competing with outside florists, for these particular patients never have had flowers purchased for them, anyway. And so—with a derring-do and for this sole humanitarian purpose—the nurses launched their commendable project.

To begin with, they secured the services of an experienced buyer, who brings fresh flowers and potted plants from the wholesale market every day. The nurses stipulated that the mark-up in price should be only enough to cover operating expenses and allow for a very small profit. These low prices enable visitors to ward patients to buy flowers, and any net profit is to be used for flowers for the lonely patients mentioned above. Should a balance still remain, it will be used for some benefit for the School of Nursing.

Ever since the opening hour the shop has been doing a lively business. Receipts for the first day amounted to over $100. Wondering if that surprising figure might have been due to the fact that everybody in the hospital was attracted to the shop on opening day, we recently made inquiries as to the amount of business done since then and learned that $100 is a fair average for each day's sales.

The prices of the beautiful things on display will amaze you! The buyer chooses each day only those flowers which are in greater abundance and are therefore less expensive. While a slight seasonal fluctuation in prices is to be expected, here are the almost incredible values which have prevailed during the pre-Easter season: daffodils—35¢ for 6; sweet peas—35¢ a bunch; tulips—50¢ for 4; violets—75¢ a bunch; roses 95¢ for 8; gardenias—25¢ apiece; bouquets of mixed spring flowers—75¢; many kinds of potted plants, including begonias, tulips, violets, etc.—50¢ to $2.

The shop will feature a corsage special for Easter—a rose or gardenia corsage for $1.25, and an orchid corsage for $1.25 to $2. Advance orders for these Easter specials would be of great accommodation to the buyer. There will also be plenty of bulb plants and Easter lilies, of course.

The shop is open weekdays from noon until 7 P.M., and on Saturdays, Sundays, and holidays during visiting hours. Student nurses are on hand to wait upon you.

The nurses do not need our best wishes for success in their new venture. Success is already assured. But we hope that once in a while they will take a second from a busy hour to realize that, thanks to them, flowers on a previously bare bedside table somewhere in the hospital may at that very moment be giving hope and comfort to a discouraged sufferer.

* * *

The annual clinical meeting of the Hall-Mercer Hospital was held on February 10 at the Philadelphia branch in the Pennsylvania Hospital. Dr. Lauren H. Smith and Dr. Earl D. Bond presided.

Papers were presented by the Pennsylvania group on the effects of insulin, adrenalin, and acetylcholine on the autonomic nervous system; and on the effect of mephesin, malononitrile, and dibenamine. These were all considered in relation to clinical expressions of anxiety, especially in schizophrenia and in the neuroses. Professor Therman reported on the physiology of nerve in relation to carbon dioxide and oxygen. In the next hour and a half, Dr. Henry H. W. Miles, Assistant in Psychiatry at the Massachusetts General Hospital, gave a paper on the follow-up of a group of 76 patients with anxiety neuroses. After this, Dr. Stanley Cobb talked about his cases of anorexia nervosa studied at the Massachusetts General Hospital in the last fifteen years, reported on some work done by Dr. Samuel H. Waldfogel and Dr. Jacob E. Finesinger on the psychological effects of reduced oxygen, and told about Dr. Erich Lindemann's work on social relations of psychiatry.

The Hall-Mercer Hospital is a joint project, under the management of the Pennsylvania Hospital and the Massachusetts General Hospital. Here at M.G.H. it consists of the clinical and research work being carried on in Ward B7. At the Pennsylvania Hospital the work is done at the Mental Hygiene Institute of the Pennsylvania Hospital. The main subject for investigation at present is anxiety.

Stanley Cobb, M.D.,
Chief of Psychiatry Service

* * *

HISTORY OF THE VETERANS LANGUAGE CLINIC

During the spring of 1945, the Assistant Director at Massachusetts General Hospital who was in charge of the Out-Patient Department was approached by the Chief Medical Officer of the Boston Regional Office of the Veterans Administration requesting that the Language Clinic in the Out-Patient Department provide care for aphasic veteran patients. At that time this hospital did not feel that such a program, uncertain as it was, should be undertaken, and during the next year aphasic veteran patients were cared for privately outside of the hospital. I was in charge of this work, and it seemed to me a great pity that the excellent facilities of the M.G.H. could not be used to provide the complete kind of care which I believed the cases warranted. Consequently, during the summer of 1946, the whole matter was reopened with the Head of the Neurological Staff and with Dr. Faxon, then the Director of M.G.H.; and it was agreed that, provided appropriate arrangements could be made with the Veterans Administration, aphasic veteran patients could be cared for on a contract basis in the Out-Patient Department. This work was actually started on October 1, 1946, and the Veterans Language Clinic has been in continuous operation ever since that time.

Since the Clinic was opened it has remained a private contract clinic. It has actually been a part of the Veterans Administration national program for the treatment of aphasic veterans and has been integrated with this program, of which I, as National Consultant in Aphasia, have been in charge, so far as the eastern part of the country is concerned. The Clinic here at M.G.H. has served as the treatment center for ambulatory veteran patients in the greater Boston area.

There were no published accounts of experiences from other clinics to indicate how a treatment clinic for aphasic patients should be organized and what was required. Our Clinic, therefore, has served as a pilot clinic and we have learned much from the experience gained here. The Clinic was organized with recognition of the fact that aphasic patients are fundamentally neurological patients suffering from brain injury, one symptom of which is their aphasia. The rehabilitation of the patients, which was the desired aim, would require careful neurological supervision and the use of a great many ancillary services, many of which were available at the M.G.H. Our aim of treatment then was to keep the patient under close neuropsychiatric supervision, with a neuropsychiatrist in charge of the Clinic. All new patients were first given careful neurological work-ups. In many cases data were available from Veterans Administration records, so that some procedures—such as X-rays, pneumoencephalograms, and even electroencephalograms—did not need to be repeated. In other cases, where data were not available, we knew we had the facilities for obtaining such information here in the hospital. As associated neurological symptoms—that is, symptoms associated with the brain injury—were recognized, appropriate treatment could be arranged for. This was true, for instance, in the control of convulsive seizures and in the relief of hemiparesis, to name only two of the most generally associated disorders.

In rehabilitating the aphasic veteran it is necessary to know a good deal about his previous level of performance. This involves family background, general language facility, education, and job experience before injury. To aid in collecting these data, as well as to help develop other aspects of the program, it was apparent that active social work participation would be necessary. Miss Josephine C. Barbour, Chief of Social Service at the M.G.H., kindly consented to advise us in carrying out this part of the program, and through her good offices we have been supplied with trained social workers to help us.

Part of the evaluation of the veteran involves the evaluation of mental abilities retained. Clinical psychology has made many contributions in this direction and we are fortunate that, in the Cortical Function Laboratory at the M.G.H., work with the language-handicapped had progressed to such an extent that experienced personnel was available to aid in an extensive testing program with veteran patients.

When information and plans had been completed through the joint activities of the neuropsychiatrist, social worker, and clinical psychologist, working as a team, it became apparent that intensive language therapy was needed in a great many cases. The aphasic is always handicapped in the use of language. Sometimes his handicap is very profound; sometimes, fortunately, only partial. Our problem was to restore as much useful language as was possible in young adults who had been injured and whose injuries were in no way progressive. Such rehabilitation required the work of trained language therapists over a long period of time. This form of therapy has been the chief function of the work of the Veterans Language Clinic.

We were fortunate, in the beginning, in having a few trained and experienced language therapists available to start the operation of the Clinic. Much could be said about the personality, training, and experience required to create a good language therapist. Teaching experience is valuable. Experience with all types of speech handicaps is essential. Teaching experience at the stage of language acquisition is helpful. Some knowledge of the integrative action of the nervous system, particularly with respect to language, seems desirable. In addition to these factors, a personality and attitude able to work with a severely handicapped patient over a long period of time is a necessity.

We rapidly outgrew the small number of trained personnel, and one of the important functions of the Veterans Language Clinic at the hospital has been the training of language therapists for use in our Clinic and in other clinics. To carry out this training program, courses of lectures were organized, covering the general subject of language problems and designed for language therapists. The lectures also covered such subjects as the anatomy and physiology of the central nervous system and of the organs of speech; a review of speech defects of various kinds; talks on the anatomy and physiology of the eye and ear; psychological attitudes in therapy; psychological testing and its value; various specific language disorders, such as stuttering and reading disability and aphasia. The lectures were largely attended. Sometimes as many as 200 visitors attended a single lecture. Not all of those who attended became language therapists; but we attracted, through the lectures, a great many therapists who went on in our clinical course of instruction, which eventually prepared them to work with aphasic patients here, at the Cushing Veterans Administration Hospital, and in other aphasia centers. It is a source of satisfaction to all of us to know that therapists trained in our Clinic are working over a wide area at the present time.

The following statistics will give you some idea as to the number of veteran patients seen, the diagnoses, and the total amount of therapy given, from 1946 to the present time:

1. Total number of patients seen in Clinic since October 1946: 93
2. Diagnoses:
    a) Aphasics 33
    b) Stutterers 47
    c) Others 13
    (High voice, husky voice, cancer of larynx, injury to tongue, cleft palate, reading disability, infantile speech, articulatory defect, etc.)
3. Number of active patients, November 1 and May 1 of each year:

Month	No. of patients
Nov. 1946	9
May 1947	26
Nov. 1947	25
May 1948	33
Nov. 1948	23
May 1949	27
Nov. 1949	22
(Mar. 1, 1950	26)

4. Hours of therapy each month, based on November 1 and May 1 of each year:

Month	No. of hours
Nov. 1946	58
May 1947	195
Nov. 1947	193
May 1948	284
Nov. 1948	212
May 1949	204
Nov. 1949	113

It is interesting to note that this Clinic, which was opened for the treatment of aphasic veterans, received over 60% of its patients on the basis of other types of language disorders—largely stuttering. The connection is, of course, that other adequate facilities have not been available and therefore these closely related language disorders have been cared for in the Veterans Language Clinic. This is in accord with the experience we have already had in the operation of the Language Clinic, first opened in 1934 in the Out-Patient Department.

Needless to say, such a load of patients has made every demand upon the hospital for space. The various Out-Patient Supervisors with whom we have worked have been most generous in creating space where there really was none to be had. That has been one of our greatest problems here— that no cohesive therapeutic unit was available. We have had to work in rooms on different floors, separated from our secretary. All this militated against the organization of a well-integrated clinic. Though these are great disadvantages, we feel they have been outweighed by the advantages at the M.G.H., with its teaching facilities and varied professional staff.

There is no question that all the members of the staff of the Veterans Language Clinic have gained much valuable experience as a result of the work here. We have learned what things are necessary and some of the things that are unnecessary in order to handle the aphasic patient adequately.

It has always seemed to me a pity that the facilities of the Clinic were available to only one group of patients—namely, aphasic veterans. There are, of course, a great many non-veteran patients who are aphasic. I refer not only to the more or less aged who are suffering from vascular accidents and others with progressive lesions such as brain tumors, but also to the large group of patients who, in this mechanical age, sustain head injuries and become aphasic. I believe they should have the advantage of clinic resources comparable to the ones I have discussed. I hope that sometime in the near future the M.G.H. will be able to provide such a clinic for rich and poor alike. There is no question that such a clinic, besides providing necessary care for patients, would teach us more and more about the handling of language-handicapped patients and provide necessary teaching material for medical students and other hospital personnel.

I believe the M.G.H. is unique in the diversity of the language problems that have been handled in the Out-Patient Department; and I do not know of another clinic in which, under careful medical supervision, patients can receive treatment combining so many medical and other associated disciplines.

Edwin M. Cole, M.D.,
Head of Veterans Language Clinic

The Board of Trustees, at their meetings on February 1 and 17, voted:

To accept with regret the resignation of Dr. W. Philip Giddings, effective June 1;

To create the post of Assistant Resident in Children's Medicine for the Out-Patient Department, and to appoint Dr. Charles A. Leach, Jr. to this position, as of April 1.

To appoint:

Dr. William B. Bacon as Second Assistant Resident in Pathology, as of July 1;
Dr. Frank R. L. Egloff as Assistant Resident in Psychiatry for one year, beginning July 1;
Dr. Paul M. Howard as Associate Psychiatrist;
Dr. Jane C. MacMillan as Assistant in Pathology, beginning July 1;
Dr. William C. Quinby as Assistant in Surgery;
Dr. John W. Raker as Assistant in Surgery;
Dr. William McL. Wallace as Assistant Physician to the Children's Medical Service.

At their meetings on February 8 and 15, the General Executive Committee voted:

To reactivate the appointment of Dr. William V. McDermott, Jr. as Resident on the West Surgical Service, beginning March 1;
To change the appointment of Dr. Laura Walters from that of Clinical Fellow to Research Fellow in Dermatology;
To reactivate the appointment of Dr. Weldon W. West as Third Assistant Resident in Surgery, as of March 1.

To appoint:

Dr. Willard Dalrymple as Clinical and Research Fellow in Medicine, beginning July 1;
Dr. Chaskiel Grossman as Research Fellow in Neurology for one year, beginning March 1;
Dr. Mark Horwitz as Clinical and Research Fellow in Medicine, as of February 1;
Dr. Albert B. Houssay as Clinical and Research Fellow in Medicine, beginning February 1;
Dr. Albert J. D. Michel as Clinical and Research Fellow in Surgery for eight months, beginning March 1;
Dr. Ferdo Petrovcic as Graduate Student As-

sistant in Radiology for three months, beginning February 1;
Dr. William B. Thompson as Clinical Fellow in Medicine, beginning July 1.

At the meeting of the General Executive Committee held on March 8, it was reported that the Pharmacy Committee had approved the request that nurses be allowed to give Protoveratrine intramuscularly to patients on Ward 4. The parenteral administration of Iso-propyl-epinephrine by nurses was also approved.

Recent gifts to the Archives Department:—

From Dr. Arthur W. Allen—a facsimile of the famous letter from John Hunter to Edward Jenner, written August 2, 1775, containing the much-quoted sentence, "Why think—why not try the experiment." Lord Webb-Johnson, President of the Royal College of Surgeons of England, had copies made to give to the initiates of the American College of Surgeons on October 21, 1949, in Chicago.

From Mrs. Harrison F. Lyman—a letter from Dr. J. Collins Warren to "Mrs. Bliss", written January 6, 1913.

From Mr. Henry Minot—2 pocket-knives which had belonged to Dr. James Jackson, the first Physician at M.G.H. Dr. Jackson was Mr. Minot's great-grandfather.

From the estate of Mr. James B. Noyes—an oil portrait of the Reverend John Bartlett, painted by Osgood of Salem, about 1830.

From Dr. Hugh Grant Rowell (*WS* 1921)—an 8-page printed leaflet which we believe to be a very rare document. Dr. Rowell is the Director of Sunnyside Restoration in Irvington, N. Y., and among some items recently submitted to him for restoration was this document concerning the Massachusetts General Hospital. Dr. Rowell wrote Dr. Churchill, asking if we had a copy of the leaflet. Upon being told we had not, Dr. Rowell purchased the leaflet for us. Although the document is undated, it is reasonable to assume that it was published in December or thereabouts, in the year 1810. It gives the report of a committee of both Houses of the Massachusetts Legislature, to whom had been referred a petition of James Bowdoin and others, "praying for the aid of the Government in the establishment of a General Hospital". An examination of the Massachusetts *House Journal* for May 1810–March 1811, revealed that this petition for our charter was read and "sent up for concurrence" on January 30, 1811. The charter was obtained February 25, 1811. Bowditch, in his detailed account of the beginning and early years of the hospital, makes no reference to this document, nor have we found it mentioned anywhere else. Therefore, every MGH-er will be most grateful to Dr. Rowell for furnishing us with this very important link in our chain of events.

From Dr. Channing C. Simmons— a papier-mâché replica of a gold medal awarded Dr. Simmons by the American Cancer Society for "distinguished service in cancer control". Also, a letter from King George V of England, with an accompanying medal, sent to each member of the Harvard University Hospital Unit after World War I.

From Dr. Eugene R. Sullivan—a German gas mask, captured in Italy during World War II and sent to Dr. Means.

From Dr. Washburn's family — 5 medals: Distinguished Service Medal, U.S.A.; Medal of the Order of St. Michael and St. George, Great Britain; Service Medal, War with Spain, U.S.A.; Philippine Insurrection Medal, 1899, U.S.A., "for patriotism, fortitude, and loyalty"; World War I Medal, U.S.A.

New addresses:—

Dr. Ernest Craige (*M* 1943), 70 Francis Ave., Cambridge 38, Mass.
Dr. Harold E. Elrick (*M* 1944), c/o Prof. Waldenström, Malmö Allmänna Sjukhuset, Malmö, Sweden.
Dr. Jacob E. Finesinger, University Hospital, Baltimore, Md.
Lt. M. Patricia Hart, ANC (*MGH* 1944), Station Hospital, Aberdeen Proving Grounds, Md.
Dr. Harold N. Segall (*a. in M* 1923-24), 4100 Cote des Neiges Road #19, Montreal 25, Quebec, Canada.

Brief bits:—

Dr. Joseph S. Barr, Chief of Orthopedic Surgery at M.G.H., was made President-elect of the American Academy of Orthopedic Surgeons at their Annual Convention, held recently in New York.

Dr. Edwin F. Cave, Visiting Orthopedic Surgeon on our staff, was one of the lecturers at the Postgraduate Fracture Course, given in New York City by Sir Reginald Watson-Jones of London, February 17–20.

At the Annual Convention of the American Academy of Orthopedic Surgeons in New York, an exhibit by Dr. Robert J. Joplin, Assistant Orthopedic Surgeon at M.G.H., on "Sling procedure to correct splayfoot deformities, hallux valgus, and metatarsus primus varus deformities" received the Gold Medal Award "for a scientific exhibit representing clinical value".

Dr. Robert R. Linton, Visiting Surgeon at M.G.H., sent us this interesting note: "Mrs. Linton and I have been in Europe for three and a half weeks, visiting on the Continent—Switzerland, Austria, and southern Germany—and also England and Scotland. The Continental part of the trip was primarily for skiing and we found that Switzerland is all that it is cracked up to be, especially Davos, St. Moritz, and Zermatt. A week was spent in the British Isles, which included visiting a number of hospitals in London and giving a lecture, at the famous Guy's Hospital, on the surgical treatment of chronic ulcers of the lower extremity and the surgical treatment of aneurysms. At the Royal Infirmary in Edinburgh, Sir James Learnmonth and his anesthetist, Dr. John Gillies, put on an operative clinic for me, to demonstrate the new type of anesthesia they are using, which permits a bloodless type of surgery. The trip was both enjoyable and profitable, and it was also of great interest to investigate personally the national British Health Act—many points of which are most disturbing, in case we come to the same end in this country. No one with whom I talked about it, either in the profession or out of it, was in favor of it. It seems likely that it is there to stay, but everyone I talked with hopes that changes can be made in the present plan of administering it."

MASSACHUSETTS EYE & EAR INFIRMARY

The purposes of the Howe Laboratory of Ophthalmology have been the advancement of eye research and the teaching of Opthalmology. In line with these dual purposes is the new color stereoscopic camera technique developed by Dr. David Donaldson, Fellow in Ophthalmic Research, which enables ophthalmologists to make more accurate diagnoses, particularly in recording the position of any lesions, and also to preserve interesting conditions for study. Progress of conditions in any particular eye may be recorded by weekly or monthly photographs.

As in any photography, the purpose is to reproduce actual conditions as exactly as possible. The various transparent media of the anterior segment of the eye offer multiple depths at which abnormalities can be visualized, and photography in the third dimension is required to demonstrate these locations.

Features of the camera which have not previously been utilized in stereoscopic photography and which enable Dr. Donaldson to obtain his unusual results are: 1) wide-range focussing for variable magnification, 2) adjustment of interlens distances for producing variable depth effects, and 3) correction for parallax without distortion.

The equipment consists of two Leica cameras, facing each other, which are connected to their respective lenses by bellows. The lenses in turn face into right-angle prisms, and the other surface of each prism faces the object being photographed. Magnification is made possible by moving the cameras equally in opposite directions. The interlens distance is varied by moving the prisms away from each other.

The source of light is an electronic flash tube which is operated by a foot switch. This foot switch also energizes two electromagnetic tripping devices which control the action of the two shutters.

The range of focussing of this camera makes it versatile enough to allow the photographing of the entire face or the limiting of the picture to a part of the cornea. Magnification up to seven times the actual size is possible, and focussing can be at infinity.

The significance of Dr. Donaldson's photography is two-fold, as we said above. Eye diseases are more readily diagnosed, particularly in relation to the location of abnormalities, and the progress of eye conditions may be observed more accurately by weekly or monthly photographs. Secondly, the teaching possibilities are expanded. Where formerly abnormalities were studied on actual patients by the slit lamp, it is now possible for up to ten people to view the eye through stereoscopic viewers or for a larger number to see the photograph thrown on a screen by a stereoscopic projector. Thus, students may observe unusual cases of the past instead of relying on patients available at the moment.

The extreme realism of the photographs was emphasized by an incident which occurred recently in the Howe Laboratory. One of the eminent surgeons on the Infirmary Eye Staff was looking into one of Dr. Donaldson's stereoscopic viewers at a photographed diseased eye and, completely absorbed in his study, remarked absent-mindedly, "Look down, please."

(*Excerpts from an article by Dr. Donaldson to be published next July in* Archives of Ophthalmology.)

Dr. Albert E. Sloane of the Ophthalmic Staff will give four lectures to the postgraduate students at the University of Michigan Medical School on April 24 and 25. He will discuss "Methods of determining axis and degree of astigmatism", "Criteria for prescription of prisms", and "Advances in refraction".

Dr. Edwin B. Dunphy, Chief of Ophthalmology, attended the Pan-American Congress of Ophthalmology in Miami, March 26–29.

Dr. Dunphy and Dr. Paul A. Chandler will go to the Wilmer Institute of Ophthalmology at Johns Hopkins Hospital for the annual invitation Course for Residents to be held April 19 and 20.

Recent visitors at the Infirmary include Dr. D. Ram, Professor of Oto-Laryngology at the University of Patna, India, and Dr. Jose Rivas, from Caracas, Venezuela. From nearer home were Dr. Marvin J. Jones, Surgical Director of the Manhattan Eye and Ear Hospital, and Dr. Francis C. Edmonds, Jr., also from the Manhattan Eye and Ear.

A year away from the daily duties of the surgical house staff has been indulged in by quite a few of the men on my service. Such a year is usually devoted to the study of some particular facet of science at a basic and fundamental level. Since my "wanderjahre" was a bit unorthodox in this respect, a summary of my activities may be of some interest.

In July 1948 I traveled to England aboard the *Queen Elizabeth*. A week in London left me with the impression of excellent surgical technique, poor food, and the possession of a Burberry coat which would have cost less in this country.

From there I went by air to Copenhagen, where a delightful week was spent with Dr. Erik Andersen (formerly of our Anesthesia staff). I was much impressed with Dr. Husveldt and his thoracic surgery at the Rigshospitalet. Pleasant evenings were spent at Dr. Husveldt's summer home on the Baltic, in the shadow of Hamlet's castle, discussing medicine, philosophy, and economics over our glasses of schnapps. It was interesting to see the wide use of American medical texts and hear the fluent use of English by the young Danish surgical residents.

After many pleasant and humorous experiences I arrived in Stockholm, where I found Dr. Crafoord extremely gracious and his hospital and operating room very impressive. Several hours were spent trying to get in touch with Dr. Robert L. Berg (now Chief Resident in Medicine here at M.G.H.) who was working at the Karolinska Institute; but because of language difficulties this reunion did not materialize, and the rest of the day was spent purchasing some surgical instruments, at ridiculously low prices, from the Stille showrooms.

Then down to Paris where, for reasons I do not now recall, I saw surprisingly little medicine (even letting a letter of introduction to Dr. Leriche go to waste). I did meet Dr. Gilbert Horrax in one of the cafes, however. I shall always remember the night of departure from Paris. While having a farewell party with several old and new acquaintances, and with the effects of the party and large doses of codeine, aspirin, and bismuth I had been taking for FUO, we had not noticed the approach of traintime. Suddenly I realized the hour, snatched up my odds and ends (some prints I had acquired on the Left Bank and some instruments I had picked up in little shops about the medical school), and raced for a cab. It took an exorbitant bribe (which wiped out all my black market earnings) to prevail upon a striking taxi-driver to get me aboard the Simplon Orient Express bound for Italy.

I was much impressed with the widespread need for doctors in Italy and, paradoxically, the great number of medical students being trained in the face of great obstacles. I was told there were 12,000 medical students at the University of Naples. There were no cadavers for dissection and no facilities for experimental physiology or pharmacology. Competition was great among the students to obtain posts as assistants to practising physicians, in order to obtain some clinical instruction. There is much tuberculosis in Italy, and the doctors there seemed to be much more impressed with the effectiveness of streptomycin than we are. Surgery was rapid, rough, and deft. Local anesthesia was widely used. I saw several gastrectomies done in 30 to 45 minutes, under local infiltration with novocaine. Several pleasant days were spent with Professor Posteli, who recently worked here with Dr. Paul D. White. He is now Chief of Cardiology at the Polyclinic in Bologna. Excellent orthopedic work continues at the Instituto Rizzoli, despite Professor Putti's recent death. It was a wonderful experience to browse through his library and personal collection of rare medical books.

By mid-August I was at the University of California in Berkeley, to begin work with Dr. John Lawrence at the Radiation Laboratory. I was assigned the project of following the fate of C14 in the organism. Since this element can be synthesized into almost any biological compound for tracer work, it was of fundamental importance to determine its rate of excretion and points of localization before it could be tried in any human biological work. Some earlier work had suggested that radiocarbon localizes in bone. This had been a deterrent to its use in humans. The results of our experiments over the ensuing 7 months showed that there was an even distribution and a rapid excretion. In the course of this work I was exposed to many new techniques and had the opportunity to see the applications of physics in many phases of biological investigation. Much work is being done in the fields of fundamental basic sciences, as well as in clinical cancer research. There is a very active clinic following and treating various blood dyscrasias with P32 and radioactive colloids. The life process of the red cell was being studied with radioiron, body water with radioactive gases, and the metabolism of cancerous tissues with radioactive substrates. The investigation of the process of photosynthesis, starting with radioactive CO_2, occupies an entire building. The laboratory at Berkeley was an inspiring place to work in, with a cooperative and harmonious group of physicians (who usually seemed to be in the way), physiologists, physicists, and chemists.

My last 4 months were spent at the Memorial Hospital and Sloan-Kettering Institute in New York. There I saw Dr. Rulon Rawson (*assoc. phys.* 1947-48), who is heading an active medical service and carrying on an extensive research program with the help of many transplanted MGH-ers, including Dr. Henry Koch (*clin. & res. fel. M* 1948). I met Dr. Allen Whipple and had the pleasure of scrubbing with him every Thursday on some experimental pancreatic surgery. Since Dr. Brunschwig had been one of my teachers in medical school at the University of Chicago, he had suggested I come to his lab in New York to work on an old pet idea of mine—finding some way of visualizing the pancreas roentgenologically. Drs. Ike Taylor and Ben Landing, while students at the M.G.H., had told me of an alkaloid which seemed to localize in the pancreas and could be traced by its fluorescence under ultraviolet light. With the help of Dr. Oscar Bodansky, various texts on organic chemistry, and a German dictionary, the cauldrons were set bubbling and a batch of the alkaloid was prepared. It was a jubilant day when we injected some rats and mice and found a beautiful fluorescent glow limited to the pancreases of these animals. Our excitement was short-lived, however, for the pancreas failed to glow in every other experimental animal tried.

My "wanderjahare" had come to an

No. 22 in a series of Staff photographs
Dr. W. Franklin Wood—Director of McLean Hospital

end. The data books were placed upon the shelf to collect dust until some brighter day, and the white suit was donned again.

George L. Nardi, M.D.,
1st Assistant Resident in Surgery

* * *

Dr. Means received this interesting letter from Dr. Frederick C. Goetz (*M* 1947). It is dated February 23, and bears the address KMAG Dispensary, APO 404, c/o Postmaster, San Francisco.

My Army career has become such a busy one there is much to tell you about but not much time for writing. However, I thought a few comments on what has happened to me here in Korea might be of interest.

I arrived here in Seoul last June, knowing that I was to be the only doctor for a 500-man Army Advisory Group in Korea—and fearing the worst. Absolutely everything I had ever heard about the country, and particularly about the lot of the American forces here, had been depressing and discouraging. And, for the first two or three months, depressed and discouraged I was, as Dr. King and others of my correspondents can testify. Without knowing anything about Army dispensaries, I found myself obliged to set one up, and then found two days later that our dispensary—still largely hypothetical—had just become the sole source of medical care for the Army people here. There followed a couple of months of uncertainty, during which I hardly knew which end was up. The logical step, it seemed to me, was to join forces with a dispensary already set up for the civilians working here for the State Department and the ECA. Though the rapport between American civilian and Army groups is actually very good here, there was no rapport at all on the question of a dispensary. The matter became a sort of football, kicked back and forth but never allowed to rest. The resulting uncertainty made medical practice more difficult than it needed to be, but the bickering has finally died down, and we remain two separate dispensaries. Waste and duplication of effort seem to me to be the result of mixing government and medicine; and while the affair was a teapot tempest, to me it was a very striking example of what can happen when laymen are given power to make decisions within the medical province.

Aside from these administrative problems, my relationship with KMAG (as the United States Military Advisory Group to the Republic of Korea is called) has been a very pleasant one. I am very much an LMD, with several hundred wives and children to make my practice truly general. It runs mainly to colds and athlete's foot, of course, but it helps restore one's sense of balance. It is refreshing, actually, to deal for a time with people who are all nearly well, in contrast to those I used to see in the Bulfinch who so often were very seriously ill.

More exciting medical experiences have come through contacts with Korean medicine—or, rather, with Korean disease, of which there is a great deal; of medicine, in our sense, there is not very much. The Japanese, in their medical schools here, sponsored an academic sort of medicine, patterned after the German model. It was impersonal, but apparently of a fairly high quality. When the Japanese withdrew in 1945, the Koreans strove to use their new-found independence to the fullest. In medicine this meant outdoing the academic arrogance of the Japanese professors, with considerably less justification. In the university hospitals most of the staffs spend their time mainly on "research". Most of this, I gather, is of dubious quality and a lot of it is downright absurd. Patients are treated, if at all, from the armchair rather than at the bedside. Nursing as we know it does not exist. Nurses are on hand mainly to boil syringes and to be attentive to the doctor on his infrequent ward visits. Most of the care of the patient, such as it is, is furnished by his family. As in other Oriental countries, the family moves in with the patient—charcoal burners, kimchee pots, and all. (Kimchee is the national dish of Korea—a sort of peppered salad, fermented like our sauerkraut, but nearly to the point of rottenness.) The net result of all this, of course, is pretty awful.

We Americans tend brashly to think that a few words from us will very promptly show the Koreans that our way is much better than theirs. The error of this thought is very soon apparent to one attempting to advise them in medicine or in many other fields. Getting a Korean to adopt the Western way of doing a thing is a discouraging job: he will smile and agree with you to your face, and then, over and over again, fall back into the old methods as soon as your back is turned. Likely as not, the old way will be the Japanese way, despite the undeniable resentment against the Japanese which the Koreans officially profess. Patiently repeated, practical demonstration seems to be the only way to get our ideas across. I was much impressed by what some have accomplished by this method—notably such missionary doctors as Dr. Paul Crane, a young Hopkins graduate who spent several years with Blalock and then returned to Korea to reopen a mission hospital in one of the southern provinces. He is carrying on his surgery with great enthusiasm and skill, and is gradually building up a sort of teaching center. This kind of effort seems to have real promise of bearing fruit in this wilderness.

Whenever I have the opportunity I see what I can in the Korean hospitals, where such diseases as relapsing fever, typhus, cholera, and clonorchiasis are routine. Last fall there was a serious outbreak of encephalitis in Seoul which, with the help of the Army lab in Tokyo, was proved to be Japanese B. No Americans were involved. This was a fascinating experience. The prospect of founding a modern research hospital—particularly one devoted to communicable diseases—would be very intriguing.

The political situation has been in the news and is of great interest here, since a very solid portion of the Iron Curtain is only about thirty miles away from us and there is a good deal of very vicious guerrilla warfare in the provinces south of Seoul. Our Congress's recent change of heart on economic aid to (South) Korea was of crucial importance here, where the whole economy rests heavily upon American generosity. The Korean Army, almost wholly US-equipped and -trained, is more impressive than one might expect. We cannot abruptly stop our aid here without laying ourselves open to charges of bad faith, and there is certainly some advantage to us in having a fairly strong Korean Army in existence. However, there is no one optimistic enough to believe that Korea can stand by itself economically for many years yet, and sooner or later our aid will have to stop. These views are my own, and unofficial, of course.

So—there seems to be much more of interest here in Korea than I dared expect. I shall be leaving in April or May, but before then I hope to complete two projects: a series of medical clinics at Severance Union Hospital, the oldest and once the best in Korea, now fallen on evil days; the other is musical—the playing of the Brahms piano quintet with a group of Korean musicians in a chamber music series. Boredom has not been a problem.

THE NEWS

No. 90 Boston, Mass. May 1950

REORIENTATION OF DERMATOLOGY — CONTINUED

A year and a half ago, under the title of "A reorientation of dermatology", the problem of redirection in this area of medicine was discussed. Thereupon a new goal was set and a beginning made to reach it. It is with this new objective and the means of its achievement that the subject of reorientation is continued. Brave words must bear fruit, otherwise they are without meaning.

The physical appearance of the department has been greatly changed and improved. From an ancient and dismal ward of the past, the in-patient service moved to the eighth floor of the White Building where there is spacious order, light, and air. This was good for the service. The patients benefited, for recovery is easier in pleasant surroundings. And the staff reacted to the fresh environment with vigor and enthusiasm. There has been improvement in the study and care of the patient. Disease of the skin is coming to have a more significant meaning. This is especially apparent at grand rounds on Wednesday mornings.

Teaching ward rounds are held on two mornings of the week for third year medical students. At these emphasis is placed upon the integration of the cutaneous phenomena of disease with those of other organs of the body, and the underlying mechanism of cutaneous reaction is related to the general processes of disease.

Because of the limitations of time, teaching in the out-patient clinic has been more restricted to familiarizing the student with the surface patterns of disease, yet even there all have been mindful of the need for better study of the patient. Unfortunately, the student's part still remains too passive. He himself should be given an opportunity to examine completely the patient. The habits of examination he acquires in the clinic will be those he carries into practice later.

Graduate students and members of the house staff actively participate in the teaching rounds for undergraduates. Assignments are made so that all may present patients with whom they have had personal contact for discussion with the undergraduate students. There are at present four residents on the service and one intern assigned for a period of two months from the medical service. It is anticipated that in time residents from other services in this and in other hospitals may come to the dermatological service for a period of training. It is not our purpose to train only those interested in the special field of skin diseases. The student of medicine needs to understand the participation of the skin in the body's reaction to injury if he would know medicine completely.

There has been an increasing concern with the emotional problems of the patient with skin disease. For the second year the department of psychiatry has participated in the study of the emotional components underlying cutaneous reactions and has provided instruction in the methods of interviewing the patient and in establishing better relations between physician and patient. This has increased the interest of the department in the psychosomatic aspects of disease as it is met on this service. It has resulted in a more thorough and rational treatment of many patients whose emotional problems were contributory to their somatic disease. In such cases salves are not enough.

The department has two out-patient clinics, one for diseases of the skin and the other, the South Medical Clinic, for syphilis. The latter functions in the program for the control of venereal disease supported by the Department of Public Health of the Commonwealth of Massachusetts. In this clinic special attention is given to the prevention of disease and to the problems of the public health as they relate to syphilis. It serves also as an important means for carrying the idea of the unity of the patient in the varieties of response to a single cause of disease, an attitude of mind to be encouraged in dermatology.

Progress in dermatology can come only from a renewed interest in the acquisition of new knowledge of the skin. All too little is known of the biochemical structure of the skin and the dynamics of its behavior or of the distortion of this structure in disease. Fundamental knowledge is yet to be gained. No longer is it sufficient to dwell upon the morphology of the past. That has been well cultivated and it should continue to have expert attention, but that is not sufficient for the times. New tools are needed, and new minds and hands are required for their employment. These essentials have not been overlooked.

The laboratories of the department, with two exceptions, are located at the Massachusetts General Hospital. These were constructed by the hospital in the Bradlee Building, once a surgical amphitheater and ward, later to become the pediatric ward. The laboratories were ready for occupancy in January 1949. They provide facilities for work in biochemistry, cytology, microbiology, and serology. There are two temperature-controlled rooms, an animal surgery, and an air-conditioned animal farm with a capacity of 180 rabbits. These, together with the offices of the department and a seminar room, occupy approximately 2,800 square feet of space. The laboratories have been equipped from funds secured through grants in aid of research.

In addition to the laboratories in the hospital, space was allocated at the Harvard Medical School, near the department of physical chemistry, for a laboratory designed for the study of plasma proteins; and at the Biological Laboratories in Cambridge, for the study of the biology of pathogenic fungi.

In these laboratories work is now in progress. During the past year the laboratory at the Medical School has been engaged in the development of a small-scale fractionation method for plasma proteins. This is now ready for clinical application. That part of the project relating to the study of plasma proteins in pemphigus and lupus erythematosus has been transferred to the laboratory at the Massachusetts General Hospital, while that part of the work relating to the development of analytical methods remains at the Medical School laboratory. At the Biological Laboratories in Cambridge the cultivation of pathogenic fungi on chick embryos is in progress, and a search is being made for an antibiotic active against a pathogenic fungus.

In the laboratory at the Massachusetts General Hospital the control of bacterial populations on the skin has been studied, and a new method for surgical scrubbing has been devised. Studies on the respiratory metabolism of the normal skin are in progress, initiating an investigation of the biochemistry of vesiculation and related phenomena. Work has been completed on the action of histamine on vascular endothelium and its antagonism by antihistaminic agents. A beginning has been made in the study of the chemistry of epithelial keratinization. There are other interests here also in the biology of syphilis in the experimental animal in relation to the localization of disease in the vascular system. The duration of infectivity of the blood in syphilis of the rabbit has been studied with respect to the tissue localization of *Treponema pallidum* and the mechanism of fetal infection.

For the future extension of research into these fields, two research fellows are now in training, one in histochemistry and the other in enzyme chemistry. The first is working in the department of anatomy at the Harvard Medical School, and the other in the department of biology at the Massachusetts Institute of Technology.

Chester N. Frazier, M.D.,
Chief of Dermatology Service

Storrow House can handle patients in the bed and chair stage of convalescence, with meals in the room and necessary nursing care. Others, who do not really need tray service but who enjoy the feeling of luxury and relaxation, may have breakfasts in bed. Call the MGH Admitting Office for arrangements for admission.

* * *

The American College of Surgeons will meet in Boston, October 23 to 27, 1950. Once again, it will include "A forum on fundamental surgical problems". These presentations are limited to 10 minutes each, without prepared discussion. They afford excellent opportunities for brief, original communications on advances in surgery, the surgical specialties, and allied fields—both clinical and experimental.

The date for the submission of titles and abstracts is now past, but any which may be sent within the next several weeks will undoubtedly receive consideration. If you have material which would be suitable for this part of the program, please send the title and abstract immediately to Dr. Howard Ulfelder, Secretaries' Office, Massachusetts General Hospital. If anyone known to you has such material, please urge that the title and abstract be sent immediately.

The Board of Trustees, at their meetings on March 3, 17, and 31, voted:

To appoint Dr. Nathaniel W. Faxon as Director Emeritus;
To accept the resignation of Dr. Benedict F. Boland from the Urological Staff;
To extend the appointment of Dr. Donald W. S. Stiff as Resident on the Radiological Service from June 30, 1950 to February 1, 1951.

To appoint:

Dr. Raymond A. Adams as Resident in Neurology for one year, beginning July 1;
Mary A. B. Brazier, Ph.D., as Neurophysiologist in the Psychiatric Department;
Dr. Ivan D. Frantz, Jr. as Assistant Physician;
Dr. William W. Hander as Exchange Assistant Resident in Anesthesiology for the month of March;
Dr. John L. McClung as Assistant Resident in Anesthesia, beginning January 1, 1951;
Dr. Harry Stokholm as Assistant Resident in Psychiatry from March 22 to June 30.

The Trustees also voted to appoint the following to the Social Service Advisory Committee:

Mrs. Edward F. Bland, replacing Mrs. Paul D. White;
Dr. Henry H. Brewster, replacing Dr. Jacob E. Finesinger;
Dr. Leo B. Burgin, replacing Dr. Joseph Garland;
Rev. James H. Burns, replacing Rev. Rollin J. Fairbanks;
Dr. Oliver Cope, replacing Dr. Henry C. Marble.

At their meetings on March 8, 15 and 29, and April 5, the General Executive Committee voted to appoint:

Dr. David B. Carmichael, Jr. as Clinical Fellow in Medicine for the period March 15 to October 1;
Dr. August Christensen as Clinical and Research Fellow in Surgery, assigned to Gynecology for four months;
Dr. Leslie Corsa as Clinical Fellow in Pediatrics, as of April 1;
Dr. Norman Gold as Research Fellow in Surgery, assigned to Gynecology for one year;
Dr. James F. Patterson as Clinical Fellow in Dermatology, effective March 1;
Dr. Joseph Rogers as Clinical and Research Fellow in Surgery, assigned to Gynecology for the year 1950.

The following letter from Dr. Dean A. Clark was sent to all members of the MGH Staff on April 10:

Enclosed are two Statements of Policy adopted by the Board of Trustees at its meeting on March 31, 1950. These policies relate principally to staff members holding joint appointments from Harvard Medical School and Massachusetts General Hospital and they have been adopted to bring the practices of the Hospital into conformity with those of the Medical School.

I wish to make it clear that the provisions regarding tenure and those regarding limitation to eleven years of appointments below the rank of Associate Professor apply only to University Full-Time and Hospital Full-Time appointees. They do not affect part-time appointees and they do not affect in any way staff members who do not happen to hold Harvard titles.

If there are questions which arise as a result of these policy statements I shall be glad to discuss them with anyone who may be interested.

The Statements were transmitted to President Conant with the following letter from Mr. Francis C. Gray, Chairman of the MGH Board of Trustees:

The Massachusetts General Hospital has been giving serious consideration to its reply to your memorandum of March 9, 1949, asking the Hospital to submit a Ten-Year Plan for development of its activities related to the Harvard Medical School.

The first official action taken by the Board of Trustees in this regard was the adoption on March 31, 1950 of the enclosed vote modifying the Hospital's policy in order to offer life tenure to persons holding joint appointments from the Harvard Medical School and the Massachusetts General Hospital, with the rank of Professor or Associate Professor.

Adopted at the same meeting of the Board was the enclosed revision of the System of Appointments and Titles, which gives in detail the method by which the above vote will be put into effect, along with certain other policies.

These two statements are intended by the Board of Trustees to bring the practices of the Massachusetts General Hospital with regard to joint appointments into conformity with those of the Harvard Medical School. I take pleasure in transmitting these to you as the first step in developing the plan which you requested. We hope to have the complete Ten-Year Plan ready very soon.

I hope you will feel, as we do, that the adoption of these policies will be of material assistance in furthering the close association between the Massachusetts General Hospital with the Harvard Medical School, which our Hospital values so highly.

The following is the resolution adopted by the Board of Trustees of the Massachusetts General Hospital on March 31, 1950, to supersede the vote regarding tenure which was passed June 11, 1948:

"The Trustees recognize that research in medical science and participation in medical education contribute materially to the care and welfare of patients, both by the alleviation of suffering and by the prevention, cure, and ultimate elimination of disease. The Trustees therefore declare as a matter of policy that endowment or general hospital funds not otherwise specifically designated *may* in their discretion be applied either to remedial care of the sick or, through support of research and education, to such advancement of knowledge as in their judgment gives reasonable promise of preventing, curing, or eliminating disease. Recognizing that the services of men outstanding in the fields of research and education may in certain instances be obtainable for patients of the Hospital only by offering salaried appointments either without limitation of time or for more than one year, the Trustees will offer, in such individual cases as they may from time to time determine, salaried appointments either without limitation of time or for more than one year, in each case subject to annual determination of the salary in accord with the funds which the Trustees determine to be available."

Rules of the Trustees
Chapter I, Article 4
As Amended by vote of the Trustees, March 31, 1950

Article 4. (a) Appointees of the Hospital who hold Medical School titles of Associate Professor or Professor, University Full-Time, shall retire from their Hospital appointments on the 30th of June following their respective 66th birthdays. Exceptions may be made by agreement of the Medical School and the Hospital concerned.

(b) Appointees of the Hospital who hold Medical School titles of Associate Professor or Professor, Hospital Full-Time, and with reference to whom the Trustees designate an intent of tenure in terms of their vote of June 11, 1948 or of March 31, 1950, or concerning whom other specific action is taken with reference to unlimited tenure of the appointee, shall retire on the 30th of June following their respective 66th birthdays. Exceptions may be made by the Trustees in agreement with the Harvard Medical School.

(c) Other appointees of the Massachusetts General Hospital holding appointments classified as Hospital Full-Time or appointees classified as Part-Time by the Medical School shall retire on the 30th of June following their respective 60th birthdays. Exceptions may be made by the Trustees and beyond the 60th birthday by agreement with the Medical School.

(d) Part-Time appointees of the Massachusetts General Hospital not holding joint appointments with the Medical School shall retire on the 30th of June following their respective 60th birthdays.

(e) In the document "System of Appointments and Titles" that currently establishes procedure in the Harvard Medical School it is stated with reference to University Full-Time appointees below the rank of Associate Professor that the University limits such term appointments to a total of eleven years in each case. The same document states with reference to Hospital Full-Time appointees below the rank of Associate Professor that there is "No limit by University to number of reappointments for terms". The Hospital, however, recognizes the soundness of a limit to the renewal of full-time appointments below the rank of Associate Professor, for Hospital Full-Time as well as for University Full-Time appointees. The Hospital's policy therefore parallels the University's policy for the University Full-Time category and the Hospital limits its recommendation for Hospital Full-Time term appointments to a total of eleven years for any appointee. In instances of transfer from University to Hospital Full-Time, computation of the maximum period during which reappointment may be made on non-permanent Hospital Full-Time status will include those years spent in University Full-Time term positions.

(f) In the same document, "System of Appointments and Titles", that currently establishes procedure in the Harvard Medical School, it is stated that at the end of the maximum duration of non-permanent University Full-Time work, an individual "may be called to Hospital Full-Time".

Hospital policy defines such a call as the approved nomination by joint ad hoc committees to a formally established position of Professor or Associate Professor (Hospital Full-Time) with salary and tenure provisions authorized by the Trustees.

(g) Recommendation for appointment to Professor or Associate Professor, Hospital Full-Time, will imply that the Hospital assumes full responsibility for tenure defined in each instance by the Trustees. Policy in regard to tenure is defined by the vote of the Trustees on March 31, 1950.

(h) Three year term appointments on Hospital Full-Time (Assistant Professor or Associate) will be recommended on the basis of an expressed intent of annual reappointment for the second and third years. When the salary for the first year is derived from a grant-in-aid subject to annual renewal by an outside contracting agency, the Trustees must in each instance be informed of a source of funds reasonably assured for salary payments during the second and third years, and approve each recommendation before it is submitted to the Medical School.

Adopted by Board of Trustees
March 31, 1950

* * *

SURGERY CLINIC

The varying fortunes of this clinic, in company with the rest of the O.P.D., have been paralleling the scientific, educational, organizational, social, and economic trends of the times for 128 years. In 1822 the Trustees authorized Dr. John C. Warren to give free surgical advice to out patients at twelve o'clock on Tuesdays and Fridays. This he did, probably at the Apothecary Shop in the Bulfinch Building, and by 1827 he was able to report that he had given such advice to "a number".

Things appear to have gone along quite informally for 24 years before the beginning of the pressure of expansion brought informality to an end. On October 16, 1846, a date better remembered for what was transpiring in the surgical amphitheatre, the Trustees voted that a record of all "Out Door patients" be kept "in a book or books to be furnished by the Superintendent".

Meanwhile, Dr. Warren's one-man project had grown to a collaboration and each staff surgeon was treating out patients in turn. In 1856 Dr. Samuel Abbot, Physician to Out Patients in addition to his many other extraordinary duties, reported that 289 patients had received advice during the year, and added, "It has been the constant aim to make the Out Patients as light a tax as possible upon the finances of the Hospital." That financial problems were indeed a matter of concern is shown in Dr. Abbot's report for 1858, when the cost of free drugs for only six months reached the startling figure of $48.21.

From that time on, the spectres of expense and crowding installed themselves as uneasy and apparently permanent lodgers in the O.P.D. Attendance more than trebled in the ten years between 1865 and 1875, possibly as a result of the depression following the war. Many years later, Dr. Washburn wrote a significant observation in this connection: "As the country made a temporary return to prosperity in 1935 an appreciable diminution of Out Patients was noted." In 1875 there were 16,993 visits, with voluntary donations from patients amounting to $267.45. The Report of the Trustees mentioned the "strongly felt" want of space, "although the waiting room has already been materially enlarged by adding the space under the seats of the operating amphitheatre."

In 1876 progressive crowding brought a suggestion to assign a House Pupil to classify patients in the waiting room (and also to help in "collecting such fees as may properly be expected from some of them"), but the Trustees replied with more than their wonted caution that although it "may perhaps be thought advisable at some future time", for the present the Porter and Nurse "must give it all the attention in their power." Eventually, however, very drastic measures had to be taken, and in 1893 Dr. John H. McCollum was appointed Examining Physician to interview out-patient applicants passing through the Lodge on Blossom Street, "with the object of excluding from the waiting room any cases of contagious disease, and as far as possible to lessen any existing abuse of medical charity."

Even this brought about no real respite. The patient census for 1894 was 25,113 visits, and in 1898 the Trustees were appealed to in no uncertain terms. The Lodge, especially, was "overcrowded, imperfectly ventilated and heated, and defective in sanitary arrangements." In this year enough land was bought to contain a new O.P.D. Building and an Eye and Ear Infirmary, and in 1900 plans for a new building were approved, providing for a separate clinic for children and the installation of new departments for orthopedics, X-ray, and physiotherapy. Three years later, when the capacious modern plant was opened, the Trustees must have breathed a sigh of relief. Attendance the first year, however, was 106,174 visits at a cost to the hospital of $45,106.

Since the economic problem, at least, is still very much alive in 1950, it may be of interest to sketch its development more in detail. The treatment of out patients remained gratuitous until 1875, when the Trustees voted to install locked boxes for the use of such patients as might care to make some voluntary contribution. Two years later one of the innumerable investigations showed that at least one-fourth of the free patients could have paid something. Accordingly, in 1881 a rule was adopted to prevent the free admission of such patients as were able to pay an admission fee. Within a year, however, the surgeons petitioned the Trustees to abandon the rule, because it was depriving them of "many interesting and instructive cases". The rule was temporarily abolished but the investigations were not. By 1894 it was suspected that the superiority of the surgical clinic could not entirely explain the difference between an increase of 35 percent among medical patients (who paid for their medicines) and 121 percent among surgical patients (who got treated free). The Trustees, therefore, voted cynically to charge surgical patients 10 cents a visit if they could pay.

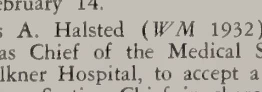
In 1913 it was necessary not only to extend this charge to all paying patients, but to raise it to 25 cents in the case of first visits by adults. Perhaps children were more docile then, but whatever the rationale, this quaint financial distinction between children and adults survived for 33 years. The fee for first visits was stepped up by 25 cent increments until 1946, when a flat rate of one dollar a visit was adopted for all patients, new and old, child and adult. This was raised to $1.50 in 1947, $2.00 in 1948, and $2.25 in 1949. It is still $2.25 in 1950, and out patients, paying only 75% of charges which approximate cost, continue to be a "tax upon the finances of the Hospital".

Overcrowding, so far as the Surgical Clinic is concerned, has abated. In the ten years from 1938 to 1948, visits to the Surgical Clinic declined from 27,256 to 14,234. There were 8,417 visits in 1949. What part may have been played by the war and postwar prosperity or the increasing rates cannot be assessed. A very definite factor, however, has been the recent growth of other clinics representing surgical specialties. Examples are Tumor Clinic (11,369 visits), Fractures (2,448), Hand (1,620), Rectal (742), Plastic (623), Residents' Follow-up (3,600), and the Gynecological Clinic which absorbed 2,737 visits in 1948, the first year of its operation. Much of the sharp decline from 14,234 in 1948 to 8,417 in 1949 may be accounted for by the opening on February 10, 1949 of the O.P.D. Dispensary, where 6,200 visits at a fee of $1.00 were made by patients, both medical and surgical, whose complaints did not call for more formal clinic management. Doubtless there are other factors concerned, as well, but the trend toward further subdivision of surgery into specialties raises the question of what function should properly be served by a basic surgical clinic.

With a view to improving quality, regardless of quantity, two steps have been taken during the past year. The Surgical Clinic has been included among the responsibilities of the Chief of Surgical Services, and the most minor surgical cases have been shifted to the O.P.D. Dispensary. These changes have resulted in a closer contact between the O.P.D. residents and the older members of the surgical staff who have accepted a limited amount of clinic work as part of their service duties and have so expedited matters as to make the clinic pleasanter for both patients and staff. Prompt written reports to referring physicians are being stressed. It remains to be seen what effect these and other measures will have on clinic attendance. That is not to imply that success should be measured in terms of size. On the contrary, it would seem that a clinic of a quality commensurate with the rest of the Surgical Department and of a size to supply suitable cases to as many beds as the hospital can afford to furnish is big enough, provided the needs of the community are being met.

The old familiar problems keep recurring with monotonous regularity over the years, but now there are signs that the old solutions may no longer suffice. It is a temptation to speculate about future developments. The growing interest in cost, distribution, and insurance-payment of medical care is unmistakable. Contemplated extension of the pre-payment principle by such agencies as the Blue Cross and the Federal Government, together with growing complexities of diagnostic and therapeutic aids and greater specialization imposed by scientific advances, cannot fail to break down many of the old distinctions between "charity" out patients and "private" office patients. How soon shall we see some professional descendant of Dr. Warren dispensing surgical advice to both kinds in a modern Office and Clinic Building attached to the hospital? Stranger things might happen!

Horatio Rogers, M.D.,
Head of Surgery Clinic



Brief bits:—

Dr. Edwin C. Albright (*WM* 1942) reports the arrival of a third son, George Hubbard, born February 14.

Dr. James A. Halsted (*WM* 1932) has resigned as Chief of the Medical Service at the Faulkner Hospital, to accept a full-time position as Section Chief in charge of gastroenterology in Wadsworth Veterans Administration Hospital, Los Angeles. His address will be Wadsworth Hospital, V.A.C., Los Angeles 25, Cal.

Dr. Robert S. Schwab, Associate Neurologist on our staff, gave a lecture at the neuropsychiatry seminar at Augusta, Georgia, on March 31. The seminar was sponsored by the Veterans Administration, to cover the eastern half of the United States. The title of Dr. Schwab's talk was "Electroencephalography in general practice".

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. Paul A. Chandler, Surgeon in Ophthalmology, was invited to give the first John E. Weeks Memorial Lecture at Portland, Oregon, in March. He chose as his subject, "Surgery of the lens in infancy and childhood". Dr. Chandler also lectured in San Francisco and Louisville, Kentucky, during March.

Dr. Robert Fink, whose residency in Ophthalmology will begin in July, is working with Dr. Robert R. Trotter on the neuro-ophthalmological patients at the M.G.H. and also is helping with research on work for the Atomic Energy Commission with Dr. David G. Cogan in the Howe Laboratory.

Miss Ruth M. Butler, case work supervisor, and Miss Madelaine Shipsey of the Social Service Department attended the National Conference of Medical Social Workers in Atlantic City, April 24-29. Miss Butler gave a paper on "Casework with an eye patient" at a panel discussion of generic and specific case work.

Miss Pauline M. Moor of the Social Service Department presented a paper on "Blind children in nursery schools" before the Parents' Organization for Blind Children, on April 21.

Dr. Edwin B. Dunphy, Chief of Ophthalmology, will give the Curran Lecture at the University of Missouri Medical School in Kansas City, in May.

Dr. Frederic B. Breed completed his residency in Ophthalmology on May 1, and has opened his office for private practice at 2 Winter Street, Salem.

* * *

FACTS ABOUT THE BOSTON EYE BANK

The Boston Eye Bank, an affiliate of the national organization, the Eye Bank for Sight Restoration, Inc., New York, was established in the fall of 1946 by a Board of Sponsors comprised of leading ophthalmologists in this area, and representatives from the religious, civic, social, legal, and business fields.

The Boston Eye Bank provides facilities for the collection, preservation, and laboratory analysis of eye tissue and the distribution thereof, for use in corneal graft operations performed *to improve the vision of persons whose blindness is caused by damaged corneas.*

The Boston Eye Bank is operated as a department of the Massachusetts Eye and Ear Infirmary, but the service is designed for all eye surgeons and eye departments of hospitals throughout New England. The Infirmary *contributes* office space, professional supervision, and the use of laboratory facilities, but the Eye Bank *depends upon voluntary financial contributions for its operating expenses.*

The extent of the Eye Bank service depends upon the willingness of the *general public* to leave eyes for use after death, and upon the cooperation of the *hospitals* in this area for the removal of eyes of deceased eye-donor patients. Therefore, a sympathetic and tactful explanation of the program to patients and their families, the medical staff, and the nursing staff, and their understanding of the program are of vital importance to its success.

As a general rule, the Eye Bank can take advantage of the gifts of only those eye donors who die in hospitals. This is because, in most instances, only hospitals have the necessary facilities for removing eyes and are familiar with Eye Bank procedure. If enough generous people sign up now to donate their eyes, the percentage of those deaths occurring in hospitals will provide a sufficient supply of eye tissue in the Eye Bank to meet the need.

Of the 41 New England hospitals now affiliated with the program, 34 are in Massachusetts, 3 in Maine, 2 in New Hampshire, 1 in Rhode Island, and 1 in Vermont. Included among these are the Massachusetts General Hospital, Baker Memorial, and Phillips House. These affiliated hospitals provide, *free of charge,* facilities for removal of the eyes of deceased patients. Permission for this is sometimes secured prior to death, but in most instances it is secured from the next of kin when he is approached relative to an autopsy. This should be done with all possible dispatch, as the eyes which are most useful are the ones removed within an hour of the donor's death. Telephone permission, witnessed by someone listening in on the line, is acceptable when the next of kin is not immediately available in person.

Every donation of eye tissue is needed and gratefully accepted. Due to a small staff and limited funds, it is impossible to take advantage of donations of eye tissue from persons who die in nursing homes or in their own homes, unless arrangements are made for enucleation at the nearest affiliated hospital. This requires careful planning and is not encouraged, except under very unusual circumstances and at no expense to the Eye Bank.

All incoming eyes are examined to make certain they are free from bacterial contamination, that the cornea is unscarred, and the tissue has not begun to deteriorate. No eyes are discarded; those not satisfactory for treating blindness from corneal opacity (the graft operation) are used advantageously for research purposes, thus ultimately benefiting other types of blindness.

Eyes must be removed within one hour after death. Eye tissue may be preserved for a maximum of 72 hours (preferably 36 hours) before being used in the corneal graft operation. When it is known that eye tissue is going to be made available, the physician in charge, the resident, or the floor supervisor should get in touch with the Admitting Office, which will call the Eye Bank, Extension 567, or the Infirmary Admitting Office (if after 5 P.M. or on week ends). Immediately after death the eyelids should be carefully closed. No cotton or other material should be placed between the lids and the eyes. An Infirmary house officer will immediately go to the designated operating room to perform the enucleation.

The Red Cross and Boston Junior League Volunteer Motor Corps provide transportation of the eye tissue to surgeons and the Eye Bank. A twenty-four-hour telephone service is maintained to facilitate speedy transportation of eye tissue. Distant communities are served through the cooperation of the airlines and railroads.

The interested cooperation of the medical and nursing staffs of the Massachusetts General Hospital, Baker Memorial, and Phillips House has resulted in 27½ percent of all donations received by the Eye Bank since its inception and has aided materially in the success already achieved. With their continued interest, and as the public becomes better acquainted with the program, the number of donations should increase.

Alice M. Crowley,
Executive Secretary, Boston Eye Bank

Just an overnight run from Chicago on the Santa Fe's "Texas Chief" and not quite halfway across the country from Boston lies Main Street of Winfield, Kansas. Since the beginning of the postwar reconversion program, five surgical assistant residents from M.G.H., at different periods of time, have called this home for six months each. The destination of their trek is the fourth floor of the town's National Bank Building, on the corner of its two busiest streets. Here in its bustling air-conditioned atmosphere are the offices of the Snyder-Jones Clinic, a thriving private group practice which draws its clientele from a wide radius of south central Kansas and northern Oklahoma. The Clinic is a remarkable collection of able practitioners. Specialized practice by Board men is available to the town in their four internists, three general surgeons, an anesthetist, a radiologist, and an ophthalmologist.

The town lies amid green rolling hills on the banks of the muddy Walnut River, a tributary of the Arkansas, just west of the Flint Hills, the westernmost reaches of the Ozarks. Its population of less than 10,000 is prosperous and pleasant, easy-going and American. Cowboys are common sight on Saturday afternoons, but Indians are as foreign as in Boston. The livelihood of all is directly or indirectly drawn from the ground—the three principal resources being wheat, cattle, and oil. The nearest crossroads of real industry is thriving Wichita, forty-seven miles north, which is also the closest for the kind of night life and entertainment to which the metropolitan from Boston is accustomed.

Surgical experience is gained primarily from assistance in the town's two small hospitals—the city William Newton Memorial Hospital and the Catholic St. Mary's Hospital—each of about sixty-bed capacity. In the two the clinic surgeons maintain an average of thirty to forty patients, who present almost all the branches of general surgery, including gyn, g.u., fracture, EENT, and some thoracic surgery. One's own operating experience is gained from the county patients, the equivalent of our ward patients, plus certain private cases "handed down" from the senior men. To alternate coverage, the Clinic also has a resident from Charity Hospital in New Orleans, and between the two most of the night and emergency work is handled. Some private office practice, and even house calls, are a part of the daily routine. Research facilities and special laboratory service are available through a small but active organization known as the Snyder Research Foundation. A teaching program is carried out, highlighted by a biochemichophysiology meeting at the Foundation and a pathology session each week.

Recreation is often of one's own making. Wichita is enough of a distance to entail a second thought, and Winfield is "dry" in a state which only in the past year legalized liquor at all. This makes Ark City (Arkansas City), fifteen miles south and "wet", of more than passing interest. Within Winfield are a nine-hole golf course, movies, a swimming pool, a bowling alley, etc., but no real dancing or eating spots. The fall season produces some of the finest hunting in the country with ducks, Canada geese, quail, dove, and farther west pheasants in abundance. Two small colleges in town offer athletic competition, and the summer evenings see a semi-pro baseball league in action.

Six months here leave the impression of a combination of the manners and methods of the Massachusetts General Hospital and good living that is foreign to most New Englanders. Knowledge that medicine and surgery of this caliber are available in towns of less than 10,000 is both encouraging and enlightening. And the manner in which medicine is actually and pragmatically practised away from the teaching center is integral in the training of a resident in such a teaching hospital.

The pros and cons of sending a resident 1500 miles for such experience may always be debated; but for this traveler and his family it was a most pleasant and seemingly worth-while experience.

Earle W. Wilkins, Jr., M.D.,
1st Assistant Resident in Surgery

We thought you might be interested to see a complete list of doctors from countries outside the United States who were registered at M.G.H., as of April 1950. Here are their names and the countries from which they came:

Fellows

Sadegh Amini—Iran
Alejandro P. Arellano—Peru
Joseph A. Boyd—Canada
Pedro M. Catoggio—Argentina
Dora Hsi-Chih Chao—China
Timothy B. Counihan—Ireland
Raymond Daley—England
Andre Duprez—Belgium
Emile Gautier—Switzerland
Chaskiel Grossman—Israel
Bernard J. Harries—England
Mark Horwitz—South Africa
Albert B. Houssay—Argentina
Keh-Wei Huang—China
Chi Hao Lee—China
Wilfred Leith—Canada
William Locke—Canada
Charles Mentha—Switzerland
William R. Merrington—England
Albert J. D. Michel—France
Carlo A. Montagnani—Italy
Julio F. Morató-Manaro—Uruguay
Charles H. Read, Jr.—Canada
Paul M. G. St. Aubin—Canada
David Stafford-Clark—England
D. Vernon Thomas—England
Richard D. Tonkin—England
Isabelle Valadian—Lebanon
John D. Wade—England
Marvin M. Wasserman—Canada

Resident Staff

Louis Bakay, Assistant Resident in Neurosurgery—Sweden
David Kahn, Assistant Resident in Pathology—Canada
Hugh A. MacMillan, Assistant Resident in Pathology—Canada
Nils Normann, Assistant Resident in Anesthesia—Norway
Guillermo C. Sanchez, Intern in Medicine—Guatemala
Boris Senior, Intern on the Children's Medical Service—South Africa
Joseph L. Shugar, Assistant Resident in Orthopedic Surgery—Canada
Harry Stokholm, Assistant Resident in Psychiatry—Denmark
Chiu-chen Wang, Assistant Resident in Radiology—China

Graduate Student Assistants

Raoul Groulx—Canada
Ferdo Petrovcic—Yugoslavia
Haroldo A. Rodrigues—Brazil

Visitors

Antonio Moto—Italy (until 6/30/50)
C. Vyag—India (until 5/1/50)

* * *

WILLIAM H. WELCH

The one-hundredth anniversary of the birth of William Henry Welch, eminent pathologist and founder of the Johns Hopkins Medical School and the School of Hygiene and Public Health, occurred on April 8, 1950. Like Sir William Osler, his life was rich and varied and his interests were many. Scientist, Brigadier General of the United States Army, scholar, humanist, lover of the arts, public-spirited citizen, sportsman, epicure—it has justly been said of him that "he had windows opening on every possible aspect of life."

Osler's junior by less than a year, Dr. Welch's association with Johns Hopkins began in 1884. There he completed a crowded half-century of scientific achievement, during which he was professor of pathology for thirty years, director of the School of Hygiene and Public Health for

No. 23 in a series of Staff photographs
Dr. Walter S. Burrage—Head of Allergy Clinic

a decade, and lastly director of the Institute for the History of Medicine. Short and thickset in build, he was endowed with phenomenal vitality and bodily health. His likeness is generally considered the best in Sargent's famous group picture of the "Big Four", commemorating the association of Welch, Osler, Halsted, and Kelly, that hangs at the end of the Great Hall in the Welch Medical Library at Hopkins.

Dr. Welch, long known as "the dean of American medicine", and more familiarly as "Popsy", celebrated his eightieth birthday in 1930, four years before his death. This Celebration, marked by official ceremonies at Washington, international broadcasts, and observances in all the larger scientific centers throughout the world, made history. More than three thousand clippings, from about one thousand seven hundred fifty newspapers and periodicals, are preserved at Johns Hopkins as a partial record of the innumerable tributes paid him at that time.

Dr. Welch delivered two addresses at the Massachusetts General Hospital—the first at the Semi-Centennial of Anesthesia in 1896, and the second, which inaugurated the series of Ether Day Addresses, in 1908. The first address, entitled "The influence of anesthesia upon medical science",(1) stressed the necessity of animal experimentation—then one of his major concerns. (From 1896 to 1900 he led a crucial fight against antivivisection.) His second address, "A consideration of the introduction of surgical anaesthesia",(2) with its broad historical background, gives, as Dr. Washburn stated, (3) the whole story, and tells in detail of the rival claims. Widely read and frequently quoted in part, it has probably gone far in establishing Morton's role in the discovery of anesthesia: ". . . the chief glory belongs . . . to Morton's deed in demonstrating publicly and convincingly the applicability of anaesthetic inhalation to surgical purposes. . . ."

It may be recalled that the circumstances under which this address was actually prepared were somewhat casual and furnish striking proof of Dr. Welch's native geniality, as well as his strength of concentration. Harvey Cushing, who accompanied him to Boston the night before the lecture was to be delivered, has given a graphic account(4) of Welch, with a writing block and a handful of cigars, sitting Buddha-like on his feet in a corner of the smoking compartment of the train, surrounded by drummers, all smoking furiously, and with whom he conversed from time to time during the progress of his writing. At about 11 P.M. Dr. Cushing retired, leaving Welch still at work. Each page of his writing block, when closely written, took a minute and a half to deliver. On October 16 he had ready an exact hour of talk. At the conclusion of his lecture he handed the manuscript to Dr. Washburn, at his request, and it was subsequently published without correction.

In 1921, when a bust of William T. G. Morton was unveiled at the Hall of Fame of New York University, Dr. Welch attended the ceremony, representing Medicine, while Dr. Washburn was present as the delegate of the Massachusetts General Hospital. The ceremony over, Dr. Welch proposed that he and Dr. Washburn do some sightseeing together and suggested, as the most satisfactory medium, a ride on the top of a 5th Avenue bus. It proved a happy suggestion, Dr. Washburn recalled, some years later. Here it may be added that Dr. Welch was familiar with many aspects of New York, and might be seen enjoying the beach at Coney Island, or perhaps one of its side shows. He died on April 30, 1934.

In speaking of himself on his eightieth birthday, he said, "No one could have been more favored in his professional career by time and opportunity, and by the good work, achievements and cooperation of pupils, assistants, and associates, than I have been."

Dr. Robert K. Brown (*WS* 1939) sends us this vital statistics report, along with other bits of news about his work.

The real news in my family is the arrival of twin sons in December, which brings the total to six boys. The oldest is seven and a half, so you can see we have a lively houseful.

As for the rest, I am keeping busy in the practice of chest surgery in Denver, working at quite a number of hospitals which are well scattered about the country. The farthest away is in Colorado Springs, which I visit once a week. I go out to Colorado General Hospital one day a week, and am Assistant Clinical Professor of Thoracic Surgery at the Medical School.

We enjoy The News and look forward to it each month.

THE NEWS

No. 91 Boston, Mass. June 1950

THE ROBERT W. LOVETT MEMORIAL RESEARCH UNIT

The Arthritis Research Unit, frequently referred to as the Lovett Fund Group, is an integral part of the Medical Service. This joint Harvard Medical School—Massachusetts General Hospital enterprise was made possible through the efforts of Dr. Frank R. Ober who in 1925 conceived the idea that an endowment for the study of crippling diseases would provide a fitting memorial to the world-eminent orthopedic surgeon. In 1929, the Lovett Fund Committee decided that the income should be devoted to the study of arthritis, and Dr. Cecil K. Drinker, Chairman of the Committee, persuaded the undersigned to assume charge of this study project.

During the first seven years, these investigations were supported by the income of the Robert W. Lovett Memorial Fund of the Harvard Medical School and by grants from the Rockefeller and the John and Mary R. Markle Foundations. During this period, the Massachusetts General Hospital made possible the hospitalization of patients to be studied and furnished us with much-needed laboratory space, equipment, and supplies. On September 1, 1937, as provided in Chapter 393, Acts of 1937, the Department of Public Health of the Commonwealth of Massachusetts entered into a contract with the Massachusetts General Hospital, for the care and treatment of persons suffering from chronic rheumatism. This contract allows for the hospitalization of twenty-five patients at any one time. With the added facilities afforded by the Massachusetts Department of Public Health, it was decided to seek additional private funds for the continuation of our studies on a broader scale. This plan materialized when The Commonwealth Fund voted a large grant for a three-year period beginning January 1, 1938. Since then, a more comprehensive program, combining care of the patient and clinical research, has been supported by the Robert W. Lovett Memorial Fund, the Massachusetts Department of Public Health, and The Commonwealth Fund. Currently, the Unit is receiving additional support from the United States Public Health Service.

From the very outset of this research project we have made detailed clinical studies of all arthritic patients entering the Hospital. Approximately two thousand patients have been cared for to date. Although we are interested in all types of joint disease, we have devoted a major portion of our time describing rheumatoid arthritis, the afflicted individuals and the life course of their disease. The latter has been made possible by means of an excellent follow-up system which permits maintaining contact with all patients who are of special interest to us in our clinical studies. This important aspect of the work has been maintained for the most part by Dr. Charles L. Short and, until recently, Miss Geraldine Sweet. The type of information gained from such long-term clinical observation is best illustrated by a brief résumé of our study of rheumatoid arthritis.

Beginning in 1930, we made a very detailed study of each consecutive rheumatoid arthritic patient admitted to the Medical Service. The study of each patient was carried out in accordance with a prearranged plan. By using a statistical sheet designed for this specific purpose, we were able to obtain the same data on each patient. The statistical analysis and description of the data obtained from the first three hundred characteristic cases of rheumatoid arthritis and a control series of comparable age and sex are providing and correlating information concerning the nature of rheumatoid arthritis. The results to date reveal many interesting findings. When completed, the study will provide us with a much-needed description of rheumatoid arthritis. We are in contact with all but four of the living members of this original group of patients. The follow-up study of these patients during periods of remission and active disease continues to provide us with additional information concerning the varied manifestations of the disease, its life course and its response to treatment.

During the course of this study it has become increasingly apparent that rheumatoid arthritis is a systemic disease. In some cases this is suggested during the prodromal period when there is no known skeletal involvement. Once the arthritis is well established, a history of constitutional, vasomotor, and neurological symptoms, and the finding of a skin rash, subcutaneous nodules, muscle atrophy, ocular and cardiac involvement, favor this interpretation. Laboratory studies reveal many physiological and metabolic alterations. Those most commonly observed are: an increased sedimentation rate, anemia, alteration of the serum proteins, a reduced carbohydrate tolerance, an increased excretion of calcium, an abnormal retention of Congo red, a slight reduction of one or more of the measurable functions of the liver, and marked synovial fluid alterations. The latter consist of a moderate elevation of the leukocytes, a reduction in sugar concentration, and a marked destruction of mucin. The widespread nature of the disease, affecting connective tissue predominantly, is evident on review of the post mortem findings on eighty-six cases. As the nature of rheumatoid arthritis became recognized, the clinical and pathological similarities to the group of generalized connective tissue diseases (rheumatic fever, lupus erythematosus disseminatus, periarteritis nodosa, dermatomyositis, and scleroderma) have become more evident. Since then, studies have been undertaken to determine whether these diseases are related pathogenically.

Of the pathological alterations observed to date, those pertaining to the heart and nervous system are particularly informative.

The cardiac studies by Drs. William S. Clark and J. P. Kulka reveal a high incidence of pericarditis. Gross disease of the valves was found in twenty percent of the cases. In an additional eighteen percent, significant valvulitis was seen microscopically. The etiology of the valvular involvement is not known. Of great interest are six cases showing an unusual myocarditis and three cases with a peculiar aortitis, one of which showed aortic valvulitis. These lesions differ from those seen in rheumatic fever and syphilis, and are thought to be manifestations of rheumatoid arthritis.

Widespread involvement of the central nervous system in rheumatoid arthritis has been demonstrated by Dr. L. Raymond Morrison. Histological changes in the spinal cord resemble those produced by aging, but they occur at a much younger age than in spinal cords obtained from patients with no history of nervous system disease. An exudative reaction is found with some degree of constancy in the interstitial tissue of the sympathetic nervous system chain. In the neighborhood of the sympathetic ganglia, as well as in the fiber pathways between ganglia, collections of hematogenous cells have been found in most of the cases examined. In view of the high incidence of vasomotor disturbances in patients with rheumatoid arthritis, it will be of value to examine the sympathetic nervous system more thoroughly with techniques which are now available. Further suggestion of central nervous system involvement is given by the elevation of the spinal fluid protein found in many cases of rheumatoid arthritis. Peripheral nerves show inflammatory lesions and offer a possible explanation of many clinical signs. The lesions are in the connective tissue of the perineurium and only secondarily involve the myelin sheath and probably the nerve fibers.

These and numerous other studies have failed to disclose specific leads as to etiology or pathogenesis of rheumatoid arthritis. They have, however, suggested a more fundamental approach, namely, detection and characterization of the tissues involved. As the normal is defined we can better interpret the alterations produced by disease. Such an approach necessitates further study of the reaction of tissues and of the individual as a whole to various insults.

Detection of the type of mesenchymal tissue first affected in rheumatoid arthritis necessitates a more detailed characterization of both loose connective tissue and the more highly organized mesenchymal tissue, their fibrillar and ground substance, and their related enzymes. This approach will require effective use of modern analytical cytology, including biophysical and biochemical methods as well as classical descriptive histology. To begin with, Dr. Jerome Gross will limit his studies to the examination of loose connective tissue, particularly the structure of collagen and the chemistry of polysaccharides, especially hyaluronic acid. It is thought that sufficient knowledge of the structure of normal collagen has been obtained and that methods have been developed to a point where it is now feasible to attempt a study of abnormal tissue with the electron microscope and associated techniques.

Since the nature as well as the specificity of the pathological process in rheumatoid arthritis and related diseases remains obscure, investigations will be undertaken in an attempt to obtain a better characterization of the lesions. The initial approach will concern the study of the earliest lesions of the disease, in order to determine which of the functional, chemical, and morphological alterations are most apt to be related to the primary injurious agent. Analysis of these changes will permit postulation as to the various causative mechanisms, the validity of which can be tested by animal experiments.

Walter Bauer, M.D.,
Director, Robert W. Lovett Memorial for the Study of Crippling Disease

(The conclusion of this article by Dr. Bauer will appear in the next issue.)

The Board of Trustees, at their meeting on April 14, voted:

That the resignation of Dr. Carroll B. Larson, as of August 1, be accepted with regret and congratulations on his new position;

That Assistant Residents on the Urological Service shall henceforth be assigned to that Service in rotation from General Surgery.

To appoint:

Dr. George Christman as Intern on the Dental Service, beginning July 1;

Dr. Owen W. Kite as Intern on the Dental Service, beginning July 1;

Dr. Leon R. Lezer as Assistant Director, beginning about July 1;

Dr. Marion L. Smith as Assistant Resident in Anesthesia, to begin August 1.

To appoint the following Assistant Residents on the Orthopedic Service for the terms indicated:

Dr. Henry H. Banks, April 1, 1951—March 31, 1952;

Dr. John O. Esslinger, October 1, 1951—September 30, 1952;

Dr. Robert G. Greene, July 1, 1951—June 31, 1952;

Dr. William J. S. Melvin, January 1, 1951—December 31, 1952;

Dr. Morten Smith-Petersen, January 1, 1951—December 31, 1952.

At their meetings on April 12 and 26, the General Executive Committee voted to appoint:

Dr. Nelson P. Blackburn as Clinical Fellow in Pathology for the period of one year, beginning July 1;

Dr. Robert A. Devloo as Clinical and Research Fellow in Anesthesia for the period of one year, beginning September 1, 1951;

Dr. Lester A. Steinberg as Clinical and Research Fellow in Dermatology, as of April 1;

Dr. Paul L. Sweet as Clinical Assistant to the Dental Clinic, as of July 1.

* * *

The second Richardson Lecture was given at the hospital on May 11. The speaker was H. L. Sheehan, M.D., D.Sc., F.R.C.P., Professor of Pathology at the University of Liverpool, England. His subject was "Clinical syndrome of chronic hypopituitarism".

This lectureship is a gift to the hospital from Dr. Edward P. Richardson's sons, as a memorial to their father—a distinguished member of our staff for many years. The first lecture was given a year ago.

* * *

Some time ago, Dr. Stanbury brought to our office a metal case containing three large rolls of motion picture film, and suggested we insert a notice of that fact in THE NEWS, with the hope of finding the owner.

Dr. Stanbury says that, judging from the costumes, the pictures appear to have been taken in about 1930. He says that one of the rolls is a colored film of a cat.

Any help in locating the owner would be appreciated. The films are still in the office of THE NEWS.

* * *

Brief bits:—

Last month we published a list of all doctors from countries outside the United States who were registered at the Massachusetts General Hospital as of April 1950, together with the names of the countries from which they came. The list reported Dr. Louis Bakay, Assistant Resident in Neurosurgery, as being from Sweden. Dr. Bakay has asked us to make a correction on that point. He says that, while he did come here from Sweden because he had been in that country for a time, he is actually from Hungary.

Dr. Edward F. Bland, Physician on our staff, will deliver the Annual Address at the meeting of the medical alumni of the University of Virginia in Charlottesville on June 9.

Dr. John R. Graham (*WM* 1936) has been appointed Chief of the Medical Service at the Faulkner Hospital, here in Boston, to succeed Dr. James A. Halsted. Dr. Graham completed his duties as Assistant in Medicine on our staff before assuming his new duties on June 1.

Dr. Carroll B. Larson has been appointed Professor of Orthopedic Surgery at the University of Iowa.

OFFICIAL NOTICE

A new procedure regarding the publication of the bibliographies of the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary is to go into effect immediately. All staff members of both hospitals please read the following very carefully.

Beginning with the July issue, titles of publications will appear each month in THE NEWS. For that July issue, please send all titles of books and articles you have published since (and including) January 1, 1950, to Cora F. Holbrook, Editor of THE NEWS. From then on, send her all new titles each month.

As soon as the December titles have appeared in the January 1951 issue of THE NEWS, these lists will be assembled and published as the Massachusetts General Hospital—Massachusetts Eye and Ear Infirmary Bibliography for the calendar year 1950. Should you fail to report a title to THE NEWS, it will not appear in the bibliography. The deadline date for each issue of THE NEWS is the 12th of the preceding month. Therefore, please send by June 12 all 1950 titles up to then, for publication in the July number. Be sure to include complete data: 1) classification of material, such as Anesthesia, General Medicine, Laboratory Science, General Orthopedics, Orthopedic Surgery, Miscellaneous; 2) title of article; 3) title of publication in which it appears, together with the volume number and page numbers. For books, give the publisher's name and his address.

A new procedure regarding reprints is also to go into effect immediately. From now on, all requests for reprints are to go directly to the individual authors, and *not* to Treadwell Library nor to THE NEWS.

Francis S. Hill, *Director, E. & E.* **Dean A. Clark, M.D.,** *General Director, M.G.H.*

Colonel David Townsend, distinguished surgeon and recognized authority on chest diseases, died recently in Baker Memorial Hospital. He left his home in Bristol, Tennessee, several weeks ago for treatment at the Massachusetts General, and had undergone several operations.

Because of the unhappy termination of his illness, it was particularly gratifying to the doctors and nurses who had attended him, to receive this letter of appreciation from Mrs. Townsend. It was addressed to Dr. Lichty, Assistant Director in charge of Baker Memorial, and reads:

> My husband, the late Dr. David Townsend, during his long and what turned out to be his fatal illness, was a patient on the second floor of the Baker Memorial. During those months, he expressed a deep appreciation of the personal interest and kindness shown him by every member of the Baker Memorial staff with whom he came in contact. Particularly,

I should like to mention the supervising nurses and the receptionists. In his appreciation, I heartily concur.

It was doubly gratifying to my husband to find this fine spirit in your splendid hospital, because he was a direct descendant of Dr. David Townsend who was connected with the Massachusetts General when it was first built, and was a great-grandnephew of Dr. Solomon Townsend, for whom the Townsend Ward was named.

May I express my personal thanks for the courtesy shown to my daughter and me in that time of our great sorrow.

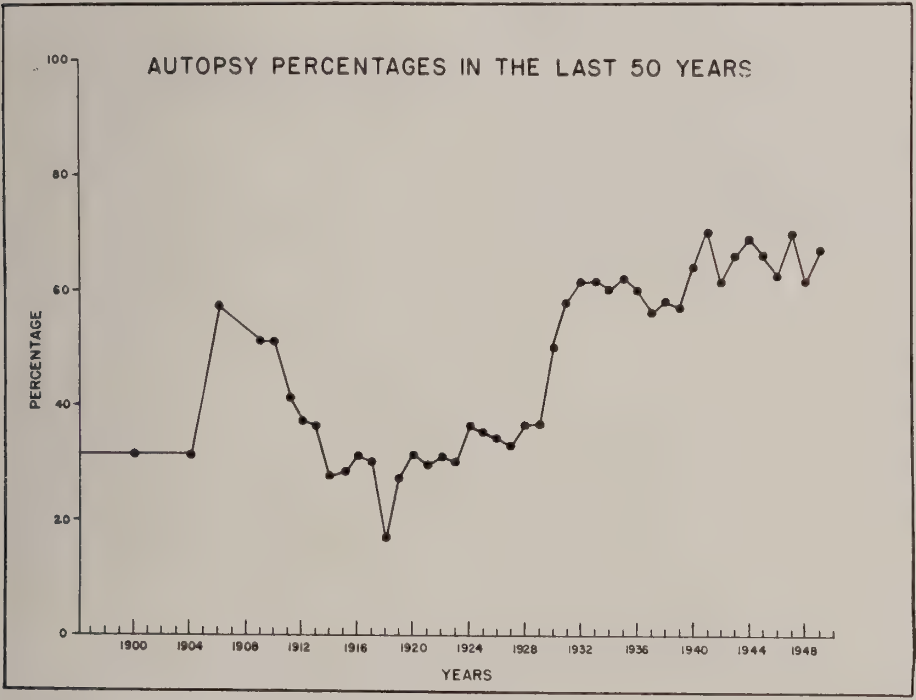
[The first Dr. David Townsend was Consulting Physician on our staff from 1817 to 1827. *Editor*]

⁂

AUTOPSY PERCENTAGES DURING A HALF CENTURY

The performance of autopsies improves the standard of medical practice by making it impossible for the doctor to bury his mistakes. It advances medical knowledge through its disclosures of the nature of disease.

Permission to perform autopsies has to be obtained by persuading the next of kin of the ~~diseased~~ that such examination serves a useful purpose. Tact and skill are required in such negotiations. At the M.G.H. this duty falls largely on the house staff. The results of their labors since the turn of the century are shown in the following figure. Dr. Robert L. Berg kindly looked up the data for us.



From an average for the General Hospital of about 30% in 1900 there has been over the years a rise to more than 65% in 1950. This ascent has not been a continuous one. It zoomed up to nearly 60% in the middle of the first decade of the century—why, we do not know. Perhaps increased interest on the part of the pathologist had something to do with it.

Following this rise a slump occurred to 30% from 1913 to 1925, with an acute depression in 1918 (17%). This latter was unquestionably due to the great influenza epidemic. There were so many deaths it was impossible to do autopsies on more than a small fraction.

Beginning with 1930 a nearly progressive increase has occurred, steeper in the thirties than in the forties. This is undoubtedly due to increasing emphasis on the importance of autopsies, and keen competition among services which generates improving methods of obtaining autopsies.

The surgical services have had fewer autopsies but in some years a slightly higher percentage than the medical. As between the General Hospital, the Phillips House, and the Baker, the General Hospital in most years is somewhat better than the others, but in 1949 the Phillips House was best of all with 70%.

It is to be hoped that these data will stimulate all staff members, especially visiting staff who do not always put their backs into it, to strive for 100% records in all divisions of the hospital.

J. H. Means, M.D.,
Chief of Medical Services

New addresses:—

Dr. Terry E. Lilly, Jr. (*ES* 1943), 5714 McGee St., Kansas City 2, Mo.

Dr. Andries Querido (*clin. & res. fel. M* 1950), Department of Internal Medicine, University of Leiden Hospital, Leiden, Holland.

Dr. Jerome Waldman (*a.r.s. Or.* 1949), Billings General Hospital, University of Chicago, Ill.

Dr. Frank C. Wheelock, Jr. (*ES* 1943), 1180 Beacon St., Brookline 46, Mass.

Recent gifts to the Archives Department:—

From Mrs. Rufus Cushman—an oil portrait of Dr. Hugh Williams, painted by Elmer W. Greene in 1938.

From Mrs. Grace W. Myers, Librarian Emeritus of Treadwell Library and of the Medical Records at M.G.H.—her copy of Bowditch's *History of the Massachusetts General Hospital,* with marginal notes made by Mrs. Myers while she was preparing for publication her useful index to the volume. Also, her scrapbook of material on Record Librarians.

From Mrs. Henry Wheeler—2 boxes of surgical instruments which were given to her father, Dr. George Hayward, by his uncle, Dr. George Hayward who worked closely with Dr. Warren at Massachusetts General Hospital during the earliest operations under ether. The earlier Dr. Hayward, who used the instruments, served on our staff from 1826 to 1863, was present at that first public demonstration of the use of ether for surgery by Morton on October 16, 1846, and performed the second surgical operation with the use of ether—the removal of a fatty tumor of the shoulder—on October 17, 1846. On November 7 he did the *first major operation* performed with ether here at the hospital—amputation at the thigh. The operation occupied a minute and three-quarters, exclusive of the time required for tying the vessels. It was considered miraculous in those days, of course, that the patient—a young girl of twenty—was entirely ignorant that her leg had been removed. Because of the unique role played by the earlier Dr. Hayward in the history of Massachusetts General Hospital, this gift of his surgical instruments is particularly appreciated. One of the boxes contains a little saw. We wonder! Probably it's too small. . . . The boxes are on exhibition in the Archives Room.

Because she has worked so quietly, tucked way off here in the northeast corner of the Moseley Building, we doubt if many of you know about the amount of volunteer work Mrs. Faxon has done for the hospital.

It was very soon after the Archives Department was opened in 1940 that Mrs. Faxon began to help out. Since that time, except for summer vacations and the time she and Dr. Faxon were in Europe, she has contributed one long morning each week. The amount of work she has done, and is still doing, needs to be seen to be appreciated. Our Archives files contain thousands upon thousands of clippings and references concerning MGH alumni and members of our staff (both past and present). These clippings, from THE NEWS and from various newspapers and medical journals, are arranged chronologically in loose-leaf notebooks and folders. It is to Mrs. Faxon that we are indebted for these carefully arranged records which are not only very useful now as reference material but which, as time goes on, will become increasingly valuable for future historians.

The March issue of THE NEWS carried a photograph of a portrait of Charles Bulfinch, the famous architect who designed our Bulfinch Building, the Massachusetts State House, the west portico of the Capitol at Washington, D. C., and several of the attractive old houses in the Beacon Hill section of Boston—to mention a few of his outstanding achievements. The original painting, done by Mather Brown in 1786, hangs in University Hall at Harvard.

Not only do we consider that the portrait was skillfully executed, but, in our estimation, it is one of the most attractive examples of portrait painting of that early American period. However, Bulfinch's own appraisal of the work was given us recently by Mr. F. V. Bulfinch, direct descendant of Charles and a member of the firm of Coolidge, Shepley, Bulfinch, and Abbott, architects of our new Research Building now in the process of construction. In a letter to his mother, Charles said that, while he was satisfied with the portrait, Gilbert Stuart could probably have done a better job, but that he (Charles) could not afford to engage Stuart.

With all respect to the greatest master of them all, we are glad, each time we study the vivacious expression of the eyes and mouth which Brown detected and captured, that he was the one to give to posterity this most engaging likeness of the great Bulfinch.

A year ago we told you about several important events concerning the Massachusetts General Hospital that occurred in the month of June, during the earlier part of the nineteenth century. Here are a few more:

June 19, 1860—Permission was granted to the House Pupils to sleep and take their breakfasts at the hospital until otherwise ordered.

June 28, 1867—At a meeting of the Board of Trustees on May 17, a letter from the Honorable Charles G. Loring had been read, recommending the admission of Miss Sophia Blake to "the medical visitations at the Hospital"; also, a note from Miss Blake and Susan Dimmock, asking leave to share the educational advantages of the Hospital, especially in the female wards. The subject had been referred to the Visiting Committee, whose report, recommending the passage of the three following resolutions, was adopted by the Board on June 28:

"1. That Chapter III, Article 3, of the Rules and Regulations for the Hospital, may be so interpreted as to include female as well as male students.

"2. That the admission of female students be left to the discretion of the Visiting Physicians and Surgeons, individually.

"3. That female students, whenever admitted, shall be placed in classes separate from male students, and shall attend the clinical practice of the female wards exclusively."

June 4, 1869—After the Board of Trustees had for some time considered the appointment of two or more ladies to serve as visitors to the female wards of the hospital, the measure was approved. Four ladies were elected by ballot to that service, and a Committee was appointed to confer with them on their proposed duties.

Colonel John Marston Goodwin, our fifth Superintendent, served the hospital from early 1841 until November 2, 1845, when he resigned.

A copy of Colonel Goodwin's military record, taken from the Roster Books of the Massachusetts Militia officers, gives the following data:

"John M. Goodwin of Bridgewater, Mass.—

Lieutenant in Squadron of Cavalry, 1st Brigade, 5th Division, commissioned May 6, 1806.

Captain in the above, commissioned Apr. 24, 1810.

Brigade Major, 1st Brigade, 5th Division, commissioned Aug. 12, 1811.

Division Inspector, 5th Division, commissioned Feb. 6, 1815.

Discharged Sept. 6, 1825."

Colonel Goodwin had been employed at the McLean Hospital several years before coming to the General. Our Archives file contains an undated paper, addressed to Colonel Goodwin, which begins with the following paragraph:

"The Trustees of Mass. Gen. Hospital, having received high recommendations of your character & qualifications for that very responsible office, hereby appoint you Steward of the Asylum for the Insane, which is one Department of the M.G. Hospital."

Then follows a list of instructions concerning his duties as Steward—which duties included such matters as keeping the financial accounts, hiring and dismissing and paying all the attendants, receiving all visitors, and purchasing and providing all stores and supplies. A note at the end says that, since Colonel Goodwin's office as Steward is a new one, the Trustees have not determined upon the amount of salary to be paid him; but, after a six-months' trial, they will be better able to judge what the services rendered will be worth.

Several letters of recommendation in our files, including one from Dr. Rufus Wyman, first Superintendent at the McLean Asylum, under whom Colonel Goodwin had served as Steward, express unqualified confidence in Colonel Goodwin for the position of Superintendent at M.G.H., and for Mrs. Goodwin as Matron.

Colonel Goodwin's letter of resignation was written on November 2, 1845. It reads:

"Gentlemen, the state of my health continues such, that it seems to be my duty to resign the trust which for nearly five years you have been pleased to confide in me, and for the duties of which my illness has for the past month incapacitated me. The interests of the Institution require on the opening of the coming year, the services of one who has health, strength & energy, to carry out your plans for the enlargement and improvement of the Institution & I wish to remove any obstacle in your way to the election of a suitable person to fill the office I now hold.

"Allow me to say, gentlemen, that during the remainder of my life, the welfare of this Institution will be near my heart, and that it will ever be a source of pleasant reflection that I have in the discharge of my duties, been brought into personal intercourse with the many benevolent and high-minded individuals who compose your Board.

"Accept my acknowledgements for the uniform kindness with which you have looked upon my endeavors to do my duty as Superintendent, together with my best wishes for you as individuals, and as a Board of Trustees.

"Permit me to say Farewell.
John M. Goodwin, Supt."

The letter was written by Mrs. Goodwin, at her husband's dictation, and on the second page of the folded sheet, she expresses, in touching terms, her grief at leaving the hospital. Her long letter concludes with these words:

"Here I found what I had always before needed, ample employment for heart and hands, and although I am sorrowfully conscious of the many failures in the discharge of my duties, I shall never cease to be grateful for the opportunity which has through your means been given me of coming into direct & kindly intercourse with so many of the human family.

"At *any* time, under the *most prosperous* circumstances, it would have been a severe trial to me to have relinquished my connection with the Hospital, but at this time when my sky is overcast, & the most gloomy prospects are before me, the trial is still more severe.

"May those to whose lot it may fall, to discharge the pleasant duties which have fallen to me in my relations with the Hospital, be as happy as I have been in the attempt to do so. I can only repeat my husband's Farewell."

It is abundantly clear, from these letters and from many other manuscripts in our files, that M.G.H. was as happy a place in which to work one hundred years ago as it is today.

Nathaniel I. Bowditch's appraisal of Colonel Goodwin and an interesting account of his last interview with him, from the Bowditch *History of the Massachusetts General Hospital,* reads:

"Mr. Goodwin was a person of cultivation and refinement, of great private worth, and of the most mild and amiable disposition. . . .

"About a week before Mr. Goodwin's death, I called to see him. He was seated in an arm-chair, in the Trustees' room. It was one of the most charming days of the 'Indian summer.' The southwest wind, cooled by its passage over the water, was admitted freely through the open windows of the apartment. Pleasure carriages and loaded vehicles, in a ceaseless procession, were seen moving rapidly or slowly along the street, and across the bridge to which it led. The river was studded with sail-boats and other vessels. The distant hum of voices, as it arose upon the ear, was drowned by the merry laugh of children just released from the neighboring school. Around us were all the varied activities of a great city, its full tide of business and of happiness."

Then follow some very sage and sober words, as spoken by Colonel Goodwin.

Captain Richard Girdler of Marblehead was our sixth Superintendent. He assumed his duties on December 1, 1845, at a salary of $1,000 a year and maintenance of himself and family. The Trustees were so well pleased with Captain Girdler as Superintendent and Mrs. Girdler as Matron that they very soon increased his salary to $1,500.

Captain Girdler was a chubby-faced man, with very kind eyes and a sensitive mouth. He wore sideburns and short under-chin whiskers.

The two wings and the octagonal building in its rear for kitchen, laundry, and apothecary were added to the Bulfinch Building during the early years of his service. The number of beds was increased from 60 to 141. It was during Girdler's administration, also, that Morton gave that first public demonstration of the use of ether for major surgery, in the Ether Dome, on October 16, 1846.

But Captain Girdler encountered difficulties during the latter part of his term which resulted in his resignation in 1858. Dr. Washburn's *History of the Massachusetts General Hospital* gives the story. We quote from page 15 of that volume:

> The organization of the Hospital from 1821 to 1858, never one to permit of high efficiency, showed its inadequacy in the expanded Hospital of the fifties. As a result of a communication from the House Officers and the careful investigation of the Trustees, a new order was ordained. A physician was to become Superintendent, with the title of Resident Physician. [In 1921 the title was changed to Director.] This action was taken by the Trustees in spite of the vote of the Board of Physicians and Surgeons "that although we believe that the administration of the internal discipline of the hospital may be improved, we are unanimously of opinion that this end will not be accomplished by the appointment of a Resident Physician." A further communication of the Medical Board stated that the rules submitted by the Trustees, showing the proposed functions of the Resident Physician, had been considered and that it was recommended to the Trustees that a part of the duties allotted to the Resident Physician should be assigned to a Superintendent, an Admitting Physician, and also a Steward — if it should be thought desirable to delegate for more efficient performance a part of the duties of the Superintendent. Although the first report of the Trustees' Committee to the Board was that the Steward should be independent in his department, upon further consideration the Resident Physician was given authority over him.
>
> So a physician became Superintendent, with full authority except for the professional care of the patients. He became the executive officer of the Trustees, who hereafter administered the Hospital through him and abolished direct action by the Visiting Committees. Captain Girdler offered his resignation, which was accepted in June 1858 with appreciation of long and faithful services. In 1863 the Steward resigned, and his duties were assumed by the Resident Physician.

On pages 152 and 153 of his book, Dr. Washburn gives a more detailed account of the incident which resulted in Girdler's resignation.

> Probably injustice was done to Captain Girdler, an estimable man but a too easy-going executive. However this may be, good came from it. The Trustees ceased their changing, individual handling of Hospital problems, a physician was made the executive officer, and all matters of administration were carried out through him.

MASSACHUSETTS EYE & EAR INFIRMARY

San Francisco was the destination of a number of the Infirmary's Oto-Laryngological Staff who attended the several medical meetings there during the latter part of May.

Dr. LeRoy A. Schall, Dr. Harris P. Mosher, and Dr. Philip E. Meltzer sat on the Board of Examiners of the American Boards of Oto-Laryngology, May 16-20. Also serving on the Boards were several Infirmary graduates: Percy E. Ireland, 1935, Werner Mueller, 1933, Gordon D. Hoople, 1926, Lawrence R. Boies, 1931, and Lyman H. Heine, 1927. These examinations preceded meetings of the medical societies held the following week.

Dr Meltzer is President of the American Oto-Laryngological Society, which met May 21-22 with Dr. D. Harold Walker as honored guest. The American Otological Society, of which Dr. Schall is Vice-President, met on May 24. Dr. Schall presented "The rehabilitation of the laryngectomized patient"—a color-sound motion picture made at the Infirmary last year through a grant from the American Cancer Society. Dr. Hoople is Secretary of the American Otological Society. Dr. Mosher was the honored guest at the meetings of the American Otological, Rhinological and Laryngological Society held on May 25-27, at which Dr. Robert C. Martin, President, presided. Dr. Martin was a postgraduate student at the Infirmary in 1926; and Dr. Kenneth M. Day, Treasurer of the Society, graduated from the Infirmary in 1924.

Dr. Schall, Chief of Oto-Laryngology at the Infirmary, is President of the American Broncho-Esophagological Association, which met on the afternoons of May 26 and 27.

The Oto-Laryngological Service of the Infirmary was host recently to a distinguished visitor from France. Dr. Georges Portmann, Professor of Oto-Laryngology at Bordeaux University, Dean of the Faculté de Medecine de Bordeaux, and one of the founders of the Collegium of Oto-Laryngology, spoke to the Oto-Laryngological Staff and residents on cancer of the epiglottis and sinuses, using moving picture illustrations. Dr. Portmann is also a national figure in French politics. Before the war he served in the Senate, where he was Chairman of the Committee on Foreign Relations.

Dr. Edwin B. Dunphy, our Chief of Ophthalmology, gave a paper on "Ocular therapeutic principles and practical applications" before the Academy of Ophthalmology and Oto-Laryngology of Virginia and West Virginia, at White Sulphur Springs, West Virginia, on May 9.

BIOGLETS

Dr. Robert E. Funsch, Assistant Resident in Orthopedic Surgery—born in St. Louis, Missouri, July 12, 1922; University of Notre Dame, South Bend, Indiana, 1940-42; Washington University, St. Louis, 1942-43; Washington University School of Medicine, 1943-46; Surgical Intern, Barnes Hospital, St. Louis, April 1946—June 1947; Surgical Assistant Resident, St. Luke's Hospital, St. Louis, July 1947—June 1948; Pathology Assistant, Children's Medical Center, Boston, August 1948—March 1949; Orthopedic Assistant Resident, Children's Medical Center, Boston, March 1949—March 1950; home, St. Louis, Missouri.

Dr. Charles A. Leach, Jr., Assistant Resident on the Children's Medical Service—born in Haverhill, Massachusetts, April 6, 1921; A.B., Brown University, Providence, Rhode Island, 1942; M.D., Harvard Medical School, 1945; Intern, Children's Hospital, Boston, July 1945—April 1946; U.S. Army: Flight Surgeon with the Air Force, serving in Virginia, Texas, Mississippi, and the Canal Zone, 1946-47; Clinical Fellow in Medicine, Children's Hospital, Boston; Resident in Pediatrics for six months, Beverly Hospital, Beverly, Massachusetts; home, West Peabody, Massachusetts.

Another "first" has arrived—this one from Dr. Laurence F. Cusick (*ES* 1906) in response to our appeal for news about his work. From 168 Willow Road, Nahant, Massachusetts, he writes:

> It will soon be forty-four years since I left the Massachusetts General Hospital—in August 1906, to be exact. It seems incredible that I could have served under Dr. Maurice Richardson, one of the first men at M.G.H. to remove an appendix, and also that I have seen the wonderful changes which have occurred in the world.
>
> Besides my own practice, I am Medical Examiner for Nahant, Lynn, Swampscott, and Saugus. I have also been honored twice by being elected president of the Massachusetts Medico Legal Society.
>
> My practice is general. However, I am very much interested in dietetics, and have had truly extraordinary results with careful diets when previous medications had failed. I do not approve of the operation for sympathectomy or section of the vagus. I have found that remarkable success can be obtained by a controlled proteid and low carbohydrate diet.

This delightful letter has come from Dr. Russell V. Fuldner (*Or.* 1939).

> Your first gentle reminder of my unpaid debt of correspondence arrived a year and a half ago. Carefully flattened out and placed on top of the Unanswered File it somehow made its way to the bottom. After each of those recurrent attacks of conscience which fire us—momentarily, alas!—with a resolve to "clean up" our correspondence, there still lay your letter, its subtle accusation confronting me until the arrival of the next mail. If not exactly at ease, I nevertheless managed to live with this situation until your second letter

No. 24 in a series of Staff photographs
Dr. Bernard M. Jacobson—Head of Anemia Clinic

came. This one, as you may remember, carried a postscript in red at the very bottom of the page. Now, no matter how heavy the haul of advertisements in the day's mail, that little red border would manage to peek out from underneath, its color and message alike inescapable. But what to tell you? Of the rewards, the little sorrows, of day-to-day orthopedic practice? Of curious New Haven customs? On reflection, these topics gleamed palely against the colorful accounts of your world-wide correspondents. . . . Abruptly, on the point of returning home from a recent vacation in Cuba, the little red postscript came to my mind's eye, gasping, as it were, beneath what must by then be a mountainous weight of unread journals and circulars. I felt this vision could not be an idle synaptic short circuit. In fact, I thought I could recognize a celestial directive—the type of call I have read about in certain biographies:

Havana, I suppose, is the nearest city with *dolce far niente* of guaranteed Latin flavor, at least for New Englanders. Much more than with us, the life of the city is out-of-doors, for all to partake of, observe, or enjoy. Old women smoking their cigars in the public squares and spitting with an easy accuracy, street restaurants open to the delightful evening air, children playing beneath the shade of the trees on the Prado, good-looking women wherever you go (speaking in a quite impersonal sense). A pleasant feeling of extroversion prevails; even in the early hours of morning you may listen to the views of citizens publicly expressed. The Cuban is deeply interested in his family, his *centro,* and his friends, in talking to and about them. A two-man team will always be found on trolleys and buses, I suspect not because of traffic requirements but just because the driver would be unhappy if there weren't someone to talk to.

In spite of the distinctive national culture, American influence is pervasive in Cuba, the island economy entwining inseparably with our own. At least in Havana, the rage for getting on is occasionally evident, *aprender el inglés* the key to success. For corollary reading, the aspirant may learn *Como ganar amigos e influir sobre las personas, por* Dale Carnegie. *El yo-yo* and *los discos voladores* have made their way south, and in the streets one may observe grown-ups as well as youths spinning the one or gaping at the other. Movies come from Hollywood, mostly. The ticket-purchaser is apt to have a little better notion of the ordeal ahead of him than we do at home: *Going my way* becomes *El buen pastor; Beyond the forest, Perfidia de mujer* (with a picture of Bette Davis appropriately posed in black silk undies). After the movies you can top off the evening with a *perro caliente* and a nickel's worth of our national beverage, *bien fría.* You can even get an American *wafflay,* if you know how to ask for it.

Out in the country, especially in the beautiful Pinar del Rio province, I could fancy myself at times back in the South Pacific. The tall palms were there (no coconuts, though), the thatched buildings, the dark-skinned youngsters running about, happily unaware of Adam's shame. To savor this aspect of Cuba you should move slowly; for you, then, the railroad has been made to order. On one of my excursions, when I asked the conductor the expected time of our arrival, he said he couldn't rightly commit himself: "It all depends on traffic." Perhaps he was trying to convey a grandiose impression to a foreigner. The only traffic evident to me, during our half-day's trip, was the single train which came from the opposite direction. We waited on a siding a few minutes to let the traffic pass. The rest of the time we chugged amiably, unhurriedly along, waving to and being waved at by people running down to see the train as it passed, our windows wide open to the breeze and the soot in the good old-fashioned way, roosters crowing from the luggage rack now and then to guard the traveler against sleeping past his destination.

The Victorian tranquility of the railroad is not matched by the bus and plane services, which are up-to-date and fast. Some of the buses carry a chromo of a saintly protector up forward; if you think, on entering, that this is merely a quaint custom, its stern practicality is apt to be impressed upon you in the course of the ride. The bus-driver's calling seems to present something of a challenge, perhaps like that of a pitcher's cannon delivery to the man at bat. Bang! and never mind about that fence back of left field. In explanation I should say that the corners in Havana are mostly blind, right-of-way going to whomever toots his horn first near the intersection. For some of the bus-drivers to be beaten to the toot is to lose face. This misfortune may be averted by starting the horn while still well in the middle of the block and keeping it at full blast until past the intersection, thus drowning out any opposition. But what if they're using the same system? For Heaven's sake sit down and stop fidgeting!

With the arrival of warmer weather round the end of Lent the "season" in Havana comes to a close. Mardi gras processions and the *camparsas* are held on some of the week ends. The *camparsas*—colorful, carefully rehearsed group dances, given on the Prado before admiring throngs of friends and spectators—provide gala occasions for all, the lookers as well as the looked-at. Profuse comment and advice is shouted from the audience, every boy in Havana is selling something to eat or drink, always the conga is being beaten out by someone and at times by nearly everyone, using drums and gourds and rusty tin pans. Amid all this turbulence, as at other times, the average Cuban's politeness is unfailing, his gaiety a feeling naturally o'erflowed, not uncorked.

I traveled both ways by cargo ship. On the outgoing trip the laziness is enjoyable; coming back one is in a hurry to reach home. Had it not been for the aura, previously referred to, which descended prior to my departure, I might have returned by air. But the plane trip is short, and I knew a composition must be in hand by the time I reached New York. By then the fate of the little red postscript had to be settled—once and for all.

[Have you, too, a neglected little red postscript in your office? *Editor*]

Another alumnus has responded to the red postscript appeal. From Dr. Donald N. Sweeny, Jr. (*WS* 1941) came this letter:

There isn't very much to tell you concerning the Sweenys. I am practising general surgery in Detroit in a group practice, and I think it is the ideal way to carry on that specialty. Since leaving the Army, I have been certified by both the American Board of Surgery and the American College of Surgeons.

I am having a hard time keeping up with some of the fertile Bostonians, with only two children and one on the way.

We are looking forward to seeing all of you in October when you will be host to the American College of Surgeons in Boston.

We always look forward to The News each month, to hear about our friends. If any of you from the General should pass through Detroit, we would love to see you.

MASSACHUSETTS GENERAL HOSPITAL 1811

No. 92 Boston, Mass. July and August 1950

THE ROBERT W. LOVETT MEMORIAL RESEARCH UNIT

(continued)

Our studies concerned with obtaining more information about the patient afflicted with rheumatoid arthritis will be extended. More knowledge concerning host susceptibility will be sought. The effect of various insults in precipitating attacks will be investigated further. Detailed, prolonged psychiatric study and treatment of a selected group of patients will be carried on by Dr. Alfred O. Ludwig, in order to obtain further knowledge of the relation of rheumatoid arthritis to personality type and emotional factors.

It is now possible to study hormone-induced remissions and hormone-withdrawal exacerbations and compare them with naturally occurring remissions and exacerbations. Studies of this type reveal that periods of active disease (natural and hormone-withdrawal exacerbations) are characterized by abnormalities in the serum protein fractions as determined electrophoretically and in the synovial fluid. The protein fractions return to normal during the spontaneous and hormone-induced remissions. Serial examinations of synovial fluid during the hormone experiments showed rapid reversal of the abnormalities and an unusual increase in viscosity. The spontaneous and hormone-induced remissions were comparable, except for an abnormally elevated synovial fluid viscosity and the persistent anemia in the latter instance. Microscopic examination of synovial tissue during the spontaneous remission and after one hundred ten days of hormone revealed persistence of mild synovitis. The persistence of mild synovitis after long-continued hormone administration plus the rapid recurrence of clinical and laboratory manifestations leave little doubt that the disease process was still active. In both the spontaneous and hormone-induced remissions the mechanism by which the manifestations of the disease were held in abeyance is far from clear, but it is certain that the underlying disease process was not eradicated.

Both cortisone and adrenocorticotropic hormone (ACTH) have proved effective in reversing temporarily the clinical manifestations and physiological abnormalities of rheumatoid arthritis and allied diseases. Thus, for the first time we can induce remissions and exacerbations at will and study at various stages the many alterations produced by the disease.

We plan to maintain under treatment four to six patients presenting the various manifestations of rheumatoid arthritis or of one of the allied diseases. Of special interest will be the study of rheumatoid arthritis of varying duration and severity, ocular manifestations (including scleromalacia perforans), improvement of results of corrective operations, the prevention of exacerbations, the determination of dosage and duration and frequency of treatment, and factors related to the development of toxic effects and their prevention and comparison with other steroids and drugs. Similar studies will be made whenever possible on allied diseases, as well as other forms of joint disease—such as infectious arthritis, gouty arthritis, and Heberden's nodes.

Hormone studies to date and those contemplated will include, whenever possible, observations on the following: Clinical manifestations, blood pressure, hematological findings and sedimentation rate, electrophoretic pattern of serum and synovial fluid proteins, serum electrolytes, cholesterol and cholesterol esters, carbohydrate metabolism, hepatic function, renal function, Congo red clearance and blood volume, synovial fluid, ascorbic acid metabolism, antibody response, histopathology of synovial tissues, nodules and muscles, muscle function (as determined by ergograms, electromyograms and muscle strength measurements), psychic state, neurological status including electroencephalograms, decalcification, pain threshold, electrocardiograms, and hormone excretion pattern and vasomotor phenomena. Such detailed studies of patients treated with hormones are possible only because of the interest and splendid cooperation on the part of many other investigators in the hospital.

Patients on the Metabolic Ward will have detailed metabolic studies in addition to many of the above observations. These will include nitrogen, phosphorus, calcium, sodium, potassium, and chloride balances; hormone excretions (reducing steroids, 17 ketosteroids, ketonic alcohol, and estrogens); excretions of creatine and creatinine and uric acid; the measurement in plasma and red cells of water, solids, nitrogen, sodium, calcium, phosphorus, potassium, magnesium, chlorides, and carbon dioxide; blood pH and plasma specific gravity; and postprandial sugar and phosphorus curves.

One patient is being studied on the Metabolic Ward for the second year with the aim of determining the relationship, if any, of the gluconeogenetic hormone, salt hormone, and "N" hormone of the adrenal cortex through the changes in the manifestations of rheumatoid arthritis. This individual has already received testosterone, desoxycorticosterone, cortisone, adrenocorticotropic hormone, cortisone and desoxycorticosterone together, and testosterone and cortisone simultaneously. For completion of the study he is to be treated with cortisone, with testosterone and desoxycorticosterone together, and with cortisone, desoxycorticosterone, and testosterone simultaneously.

It is hoped that the results of the studies outlined above will give clues as to the nature of the disease process in rheumatoid arthritis, increase the knowledge of the nature of remissions and exacerbations, and throw light on the role of precipitating factors. Further evaluation of the therapeutic usefulness of these hormones and added information on pituitary-adrenal physiology are also aims of this work. These studies are being conducted by Drs. William S. Clark, Marian W. Ropes, and others.

Since the beginning of this research project, it has been our aim to gather information concerning the anatomy and physiology of articulations and the nature of the diseases disturbing them. It is our belief that knowledge of this type should eventually lead to a better understanding of the arthritides of obscure etiology. Accordingly, Dr. Ropes has devoted considerable time to studies pertaining to the origin and properties of normal synovial fluid and its important constituent mucin. For obvious reasons our interest has centered on the mechanism of exchange between the joint cavity and the body as a whole. The results to date suggest that the articular lumen represents a large connective tissue space and that the synovial fluid is an example of tissue fluid in general. Analysis of some fifteen hundred joint effusions and its correlation with histopathological findings by Dr. Ropes and others shows that the changes produced by disease depend upon altered permeability of the synovial tissues and disturbance of intra-articular metabolism. These changes are sufficiently characteristic to establish synovial fluid analysis as an important diagnostic aid.

In addition, we have made detailed pathological studies of articular tissue (biopsy, surgical, and autopsy specimens) obtained from approximately fifteen hundred cases representing all types of articular disease. These studies have been directed by Drs. Granville A. Bennett, Edward A. Gall, and J. Peter Kulka. This pathological collection increases in value for teaching and diagnostic purposes and offers material for a complete description of the pathology of joint disease. The importance of pathological studies in this research program is well illustrated by the monograph *Changes in the knee joint at various ages—with particular reference to the nature and development of degenerative joint disease,* published by The Commonwealth Fund in 1942.

Our knowledge of articular diseases has also been enhanced by detailed bacteriological examinations. To date there is no evidence available to suggest agents that may produce the tissue changes found in rheumatoid arthritis and the related diseases. However, certain findings by Dr. Louis Dienes indicate that the pleuropneumonia-like ("L") forms of various bacteria should be investigated to determine whether any of them play a role. The relation of streptococci to rheumatic fever has been demonstrated and a relation to rheumatoid arthritis has been suggested because of the high incidence of streptococcal agglutinations. However, streptococci have never been found in their usual form in the tissue lesions. The possibility that they are present and pathogenic in an "L" form is intriguing and warrants continued efforts to produce pleuropneumonia-like forms of the streptococcus. Such variant forms have been produced from many gram-negative bacilli and cocci and from a few gram-positive spore-bearing bacilli, but not from gram-positive cocci. The present plans of Dienes to learn more of the nature and pathogenicity of the pleuropneumonia-like organisms include investigation of the growth requirements, cultivation on living tissue media, recognition in tissue, development of serological methods for differentiation of the strains and determination of any immunological response in patients, and study of the conditions under which bacteria are transformed into the "L" form and then back to the bacillary form. There will be renewed efforts to culture pleuropneumonia-like organisms from tissues from the rheumatic diseases, using the improved cultural techniques.

Other possible agents are antigenic substances, including those present in tissue. Some years ago Dr. J. Wallace Zeller, and more recently Dr. Joseph E. Giansiracusa, have been engaged in attempts to produce anti-sera for cartilage, muscle, connective tissue, joint fluid, and synovial fluid mucin. Further studies will be undertaken to determine the tissue changes produced by injection of the antigen into the joints of sensitized animals.

In addition, detailed clinical, bacteriological, pathological, and roentgenological studies in over two hundred cases of gonorrheal arthritis have been made. Many of these patients have been followed for years. Similar data have been collected on a much smaller series of patients suffering from Reiter's syndrome. Comparison of these data with similar data obtained from patients with rheumatoid arthritis will aid greatly in deducing certain clinical and etiological facts.

Throughout this period we have enjoyed the wholehearted cooperation of the Orthopedic and Physical Therapy Departments in the care of both ward and clinic patients. Representatives from these departments are present at the weekly in- and out-patient clinics and are of tremendous aid in caring for these patients. Both groups have devised numerous procedures which facilitate greatly the care of these arthritic patients. Such team play is invaluable.

The failure to disclose specific leads as to the etiology or pathogenesis in the clinical studies of rheumatoid arthritis and the related diseases has, as can be seen from the above, reoriented us to a more fundamental approach—namely, a characterization of the tissues involved, so that as the normal is defined we can better interpret the alterations produced by the disease. Such an approach necessitates also a study of the reaction of tissues in vivo and in vitro and of the individual as a whole to insults of various types. These studies will be pursued in the years to come.

The pursuit of this work in the Departments of Medicine and of Pathology of the Harvard Medical School and the Massachusetts General Hospital has been made possible through the generous cooperation of Drs. J. Howard Means, S. Burt Wolbach, Tracy B. Mallory, Marius N. Smith-Petersen, Joseph S. Barr, and many others. I shall make no attempt to list all the workers (physicians, technicians, social workers, and secretaries) who have participated in this research project since 1930. It is only because of their loyal support that the above-mentioned work and other studies have been accomplished.

Walter Bauer, M.D.,
Director, Robert W. Lovett Memorial
for the Study of Crippling Disease

* * *

Service Pin awards were recently presented to 65 employees at McLean Hospital. Mr. Ralph Lowell, Chairman of the McLean Hospital Committee, made the presentations during ceremonies which included a buffet supper and a program of entertainment by Betty and Tommy Tucker.

Seven four-star pins (denoting 40 years of service), 6 three-star pins (for thirty years' service), 23 two-star pins (for twenty years), and 29 one-star pins (for ten years) were presented. Three additional employees of McLean are wearing four-star pins which were received previous to the recent awards.

* * *

Ninety students from the September 1950 and the February 1951 classes shared in the graduation exercises of the School of Nursing on June 2.

The exercises were held in the Bulfinch Yard, where the girders of the new Research Building furnished the backdrop and the sounds of the cranes provided the overtones. The speaker for the day was appropriately chosen to be Francis O. Schmitt, Ph.D., Professor of Biology at the Massachusetts Institute of Technology, a Trustee of the Massachusetts General Hospital and a member of the Hospital's Committee on Research. Dr. Schmitt spoke on "Nursing education at midcentury", and emphasized the effect of medical progress on the character of nursing and the need for nursing education which will teach the "individual to think clearly and objectively, to adjust herself adaptively to new and often baffling situations, to strive to control emotional drives of whatever origin and to channel them in directions maximally productive of good for the individual and for society."

Miss Sleeper, Director of the School of Nursing and Nursing Service, reported that the School enrollment had now passed that of prewar years, due to the reduction in student drop-outs and the increased number of applications to the School.

Through money secured from the income of the School's small Endowment Fund, a plan has been developed with the Boston Visiting Nurse Association, whereby students will have opportunity to observe in the homes of patients discharged from the Hospital. The student will go only as an observer—not to learn public health nursing, but to gain insight into the patients' and families' needs which will help her to give more effective care to patients on the wards or in the Out-Patient Department Clinics.

The first student in the Coordinated Program opened by Radcliffe College and the School of Nursing in 1946 will come to the School of Nursing in July for two years of full-time study and practice. In 1951 the Simmons College School of Nursing affiliation with the three-year School will close, and the Simmons College School will thereafter be affiliated with the Coordinated Program, so that the students in the two collegiate groups may be taught together.

New addresses:—

Dr. T. Berry Brazelton (*a. r. p. CM* 1947), 51 Brattle St., Cambridge, Mass.

Dr. Clara R. Johns (*clin. fel. Psychi.* 1950), Elgin State Hospital, Elgin, Ill.

Dr. John J. Kneisel (*EM* 1940), Pine Road, Briarcliff Manor, N. Y.

Major Wilbour C. Lown (*past Head Photo. Lab.*), Room 5 B, 1075 The Pentagon, Washington 25, D. C.

Major Frank A. Mantz, Jr., MC, USA (*res. fel. P* 1950), Letterman General Hospital, Presidio of San Francisco, Cal.

Dr. Earl B. Sanborn, Jr. (*a. r. NS* 1943), Veterans Administration Hospital, McKinney, Tex.

Dr. Nils Bengt Skanse (*res. fel. M* 1948), Tessins väg 16A, Malmö, Sweden.

Dr. John W. Smillie (*ES* 1944), Division of Ophthalmology, University of Minnesota Hospital, Minneapolis 14, Minn.

ERRATUM

The word "diseased", which appeared in the 9th line of Dr. Means's article on autopsy percentages in last month's issue, should be changed to read "deceased". The error was made by the proofreaders —not in Dr. Means's office.

STAFF PUBLICATIONS

A new procedure regarding the publication of the bibliographies of the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary goes into effect with this issue of THE NEWS. Beginning now, titles of new publications will appear each month in THE NEWS. If you have not already done so, please send all titles of books and articles you have published since (and including) January 1, 1950, to Cora F. Holbrook, Editor of THE NEWS, and continue to send her all new titles each month.

As soon as the December titles have appeared in the January 1951 issue of THE NEWS, the lists will be assembled and published as the Massachusetts General Hospital—Massachusetts Eye and Ear Infirmary Publications for the calendar year 1950. Should you fail to report a title to THE NEWS, it will not appear in the assembled list.

Be sure to include complete data: 1) classification of material, such as Anesthesia, General Medicine, Laboratory Science, General Orthopedics, Orthopedic Surgery, Miscellaneous; 2) title of article; 3) title of publication in which it appears, together with the volume number and page numbers. For books, give the publisher's name and address.

The deadline date for each issue of THE NEWS is the 12th of the preceding month.

All requests for reprints are to go directly to the individual authors, and *not* to Treadwell Library nor to THE NEWS.

No reprints are available for items marked with asterisks.

The following titles have been submitted, to date:

Anesthesia

Briggs, B. D.
Prolonged endotracheal intubation.
Anesthesiology 11:129-131.

Biochemistry

Chou, T. C., Novelli, G. D., Stadtman, E. R., and Lipmann, F.
Fractionation of coenzyme A-dependent acetyl transfer systems. (Abstract)
Federation Proc. 9:160.

Lipmann, F., and Tuttle, L. C.
Lipase-catalysed condensation of fatty acids with hydroxylamine.
Biochim. et Biophys. Acta 4:301-309.

Novelli, G. D., Kaplan, N. O., and Lipmann, F.
Enzymatic degradation of coenzyme A. (Abstract)
Federation Proc. 9:209.

Novelli, G. D., and Lipmann, F.
The catalytic function of coenzyme A in citric acid synthesis.

The Board of Trustees, at their meetings on May 5 and 19, and June 2, voted:

That for the current corporation year (ending February 23, 1951) Staff members whose appointments were voted for one year from February 17, 1950, should be continued in active status until the full year has expired, even though their ages would require them to retire on June 30, 1950, under the new rules;

To award the Warren Triennial Prizes as follows:

First Prize of $1,500 to Dr. Paul C. Zamecnik, Dr. Ivan D. Frantz, Jr., and Mary L. Stephenson, A.B., for their essay entitled "Studies on protein metabolism";

Second Prize of $500 to Dr. J. Garrott Allen for his essay entitled "Homeostasis, hemorrhage and hemostasis";

To accept with regret the resignation of Dr. David G. Freiman, effective September 1;

To accept with regret the resignation of Dr. John W. D. Garrett, effective June 18;

That Irving H. Blank, Ph.D. be given the title of Research Associate on the Dermatological Service;

That the title of Mary A. B. Brazier, Ph.D. be changed to that of Neurophysiologist in the Departments of Psychiatry and Anesthesia;

That Dr. Janet W. McArthur's title be changed to Assistant in Medicine;

That Dr. Thomas H. Green, Jr. be reappointed Third Assistant Resident in Surgery, beginning July 1;

That Dr. John D. Reeves, Jr. be continued on as an extra Resident on the Radiological Service for the period January 1 to June 30, 1951;

That Dr. Clifford J. Straehley, Jr. be reappointed Third Assistant Resident in Surgery, beginning July 1.

To appoint:

Drs. Marshall K. Bartlett and Edward F. Bland as Members-at-Large of the General Executive Committee for the year beginning May 1;

Dr. John P. Bunker as Assistant Anesthetist, beginning June 19;

Dr. Wilma J. Canada as Second Assistant Resident in Pathology, beginning January 1, 1951;

Dr. William N. Christenson as Assistant Resident in Psychiatry, beginning July 1, 1951;

Dr. Charles G. Craddock as Assistant Resident in Psychiatry, beginning July 1;

Dr. Robert E. Scully as Assistant Pathologist, beginning September 1, replacing Dr. Freiman;

Dr. Betty F. Selverstone as Assistant to the Children's Medical Service for one year, beginning May 1;

Dr. Stanley T. Soholt as Senior Resident in Orthopedic Surgery from October 1, 1950 through September 30, 1951.

At their meetings during May, the General Executive Committee voted:

To promote Dr. Lincoln D. Clark to the position of Resident in Psychiatry for a period of six months, beginning July 1;

To promote Dr. Charles S. Keuper to the position of Resident in Dermatology, beginning July 1;

To continue Dr. Lester J. Bienvenu as Assistant Resident in Dermatology for another year, as of July 1;

To continue Dr. John E. Le Donne as Assistant Resident in Dermatology for another year, as of July 1.

To appoint:

Dr. Joseph A. Blais a Clinical and Research Fellow in Medicine, to work with Dr. Walter Bauer, beginning August 1;

Dr. Douglas Bocking a Clinical and Research Fellow in Medicine, to work with Dr. Walter Bauer, beginning July 1;

Dr. Gilberto Burke a Graduate Student Assistant in Surgery for a period of six months, as of May 10;

Dr. Chester J. Dexter a Clinical Fellow in Surgery, assigned to the Tumor Clinic, beginning July 1;

Mr. George Eisenman a Research Fellow in Anesthesia for the period beginning June 23 and ending about September 23;

Dr. Joseph E. Levinson a Clinical and Research Fellow in Medicine, to work with Dr. Walter Bauer, beginning July 1;

Dr. Thomas W. Mattingly a Clinical and Research Fellow in Medicine, assigned to cardiology, for the period May 1 to October 1;

Dr. Alex F. Müller a Clinical and Research Fellow in Medicine, to work with Dr. Walter Bauer, as of May 1;

Dr. Stanley T. Soholt as Clinical and Research Fellow in Orthopedic Surgery for the period July 1 through September 30;

Dr. Earl G. Solomon a Clinical Fellow in Psychiatry, as of July 1;

Dr. Philip A. Weisman a Clinical and Research Fellow in Surgery for the period July 1, 1950 through June 30, 1951.

* * *

Dr. Kurt H. Thoma, formerly Chief of our Dental Service and now a member of our Board of Consultation, was awarded the Jarvie Fellowship Medal at the 82d Annual Meeting of the Dental Society of the State of New York on June 5. Dr. Thoma delivered a paper entitled "The development and dissemination of oral cancer", in which he stressed the important role of the dentist in the early recognition of oral cancer.

"Cancer should be made problem No. 1 of the dental profession," Dr. Thoma said. "Every general dentist should help in the campaign against cancer. Our dental schools are training the students in the clinical and pathological diagnosis of cancer. The oral surgeon who has been adequately trained and is familiar with this region can, because of his special knowledge of the anatomy, physiology, and the problems of restoration, add his share not only to cure these patients but also to safeguard their appearance, function, and comfort."

STAFF CLINIC

The Staff Clinic has been in existence for eleven years. During this time there has been a steady increase in its activities, in keeping with the greater acceptance of the benefits of the Staff Clinic by all of the hospital personnel.

The Clinic was organized in 1938 on an informal basis, and in that year there was an average of approximately five patients per day seen in the Clinic. In 1942 Mrs. Helen Horner became head nurse in charge of the Clinic and continued this duty until her retirement in 1949, at which time Mrs. Rita Rayhorn was appointed head nurse.

In 1942 Dr. Robert S. Palmer was appointed Chief of the Staff Clinic and held this position until he left for military duty with the Navy. During the war years, Dr. Dera Kinsey carried on, having only two physicians as assistants most of the time. Dr. Palmer again assumed the position of Chief upon returning from the war, and continued on until July 1, 1948 when the writer was appointed Chief.

In 1943 the Staff Clinic was moved from the Medical OPD to its present location adjacent to the Medical OPD and became a separate department in the hospital. At that time, the changes in the workmen's compensation law made pre-employment physical examinations imperative, and the daily census of the Clinic soon increased to about 30.

In 1946 the number of doctor hours per week allotted to the Staff Clinic was increased to 34, when 50 patients per day were being seen, making a total of more than 15,000 visits in a single year. Since then, the number of doctor hours has remained at this level, although there has been a gradual increase in the number of patients to the present total of 18,303 visits in 1949, or 61 per day. Many of the younger members of the Visiting Staff and the Clinical Fellows have contributed much of their time since 1946, and by their kindly handling of the hospital personnel have made each employee feel that he was seeing his private doctor when he came to the Staff Clinic.

In the position of Chief of the Clinic, it is possible to assess the state of the health of the hospital family, which has been excellent during the last few years. In spite of the increasing number of personnel, the number of days of absence for illness and injury has been decreasing during the last two years. There have been no serious epidemics in the hospital, and the incidence of tuberculosis is conspicuous by its absence.

Acting as health supervisor, the head nurse of the Staff Clinic is responsible for sending out periodic X-ray requisitions to all hospital personnel who come in contact with tuberculosis patients. She also must see that all personnel who handle food are given yearly immunizations and chest X-rays. Beginning in 1949, an annual physical examination was made available to all employees over the age of 45, and it was strongly recommended that everyone eligible avail himself of this opportunity. This serves as a screening examination to discover unsuspected illnesses.

The aim of the Staff Clinic personnel is to give the patient the best possible help with the least loss of time from his work. For this reason, free medicines for acute conditions were made available in the Staff Clinic during 1949, doing away with many hours of waiting in the line at the Pharmacy.

The growth of the Staff Clinic, as evidenced by the appended table, does not indicate an increase in the amount of illness, but rather is proof of the fact that the Clinic is more nearly fulfilling its mission of being personal physician for all hospital employees, for both major and minor health problems.

Year	Total visits	Average per day
1938	1801	5.0
1939	2757	9.1
1940	4528	14.9
1941	4978	16.4
1942	5620	18.6
1943	6004	19.9
1944	9156	30.3
1945	10707	35.0
1946	15107	50.0
1947	17351	57.4
1948	17907	59.0
1949	18303	61.1

Perry J. Culver, M.D.,
Head of Staff Clinic

When Miss Holbrook asked me for a few words "on any subject I might choose", I decided against "Why can't surgeons and anesthetists be friends?" and compromised on "Impressions of China", as more likely to be accepted.

When I left East Surgical in April 1946 China seemed a long way to go, but I never did get far away from the General. Jack Carey (*WS* 1946) was at the same field hospital. Chiu-an Wang (*WS* 1944) had set up practice in Canton, and we received an occasional patient from Wayne Wilkins (*WS* 1945) who was sailing back and forth across the Pacific in a Navy transport.

I suppose the things that impressed me most when I got to Tientsin were how dirty it looked and how bad it smelled—much as an infected burn at its first dressing. As the months passed, however, I became increasingly surprised at the absence of severe infections among Americans there. Amebiasis was the one tropical disease at all prevalent, and no one escaped an occasional bout of dysentery (my single experience following a meal in an American home).

I was also much surprised to find that many of our notions concerning the Chinese and their customs are erroneous. It isn't true, for example, that all Chinese look alike; and, moreover, they have never even heard of chop suey. The native Chinese dishes were actually delicious concoctions, consisting of innumerable different ingredients—such as lotus roots, sharks' fins, and hundred-year-old eggs.

When I visited the Chinese hospitals, I was surprised and impressed to find all the clinical records and conference reports in English. Most of the surgeons had been trained in the United States and were familiar with the current American medical literature. On the other hand, they had the meagerest equipment with which to work. Open chest surgery was performed under open drop ether, and minor surgery was usually done with "premedication" alone, to save the precious ether. The word for medicine, incidentally, is pronounced simply "E", but when written out is a very complicated character symbolizing a needle in a box, a masseur's hand, and a wine bottle containing healing spirits. Another medical oddity turned up when I had to obtain permission for and perform an autopsy on an old Chinese man, upon whom some of our men had vented misplaced holiday exuberance on Christmas afternoon. The man's wife was hysterical and I doubted that she would grant me permission to make any examination at all, and certainly not that of the cranium. Since it developed that the man had died of a massive subdural hematoma, it was fortunate that Chinese superstition taboos the touching of the body, but not of the head—as might be expected in this country.

This was just one of an endless list of claims made by the Chinese against us. Another concerned one of the Marines who had become attached to a very attractive Chinese girl—who, incidentally, had false teeth. She was so attractive the Marine was afraid to trust her and always took her false teeth back to camp with him. The girl, being equally devoted, was agreeable to the arrangement and stuck close to home when *sans* Marine and *sans* teeth. But one day, without warning, the Marine's unit was restricted and pulled out without further liberty. Faced with the prospect of having to replace her teeth, the girl filed a claim with the Marines. The bill amounted to around $90 and in due course of time, so the story goes, was paid.

John P. Bunker, M.D.,
Assistant Resident in Anesthesia

Brief bits:—

Dr. Edward B. Benedict, Endoscopist at M.G.H., presented a discussion of the "Symposium on Gastroscopy" at the meeting of the American Gastroenterological Association and the American Gastroscopic Society in Atlantic City, on April 28 and 29. Dr. Benedict has written a new chapter on "Diseases of the esophagus" for Nelson's *System of Medicine*.

Dr. Bradford Cannon, Assistant Surgeon on our staff, was elected Secretary-Treasurer of the American Board of Plastic Surgery at its recent semiannual meeting.

Dr. W. Philip Giddings, whose resignation as Assistant in Surgery became effective June 1, has accepted the position of Chief of Surgery at the new Veterans Administration Hospital, now being built in Albany, N. Y. Dr. Giddings has also been appointed Assistant Professor of Surgery at the Albany Medical College. He expects to move to Albany in the early autumn. In the meantime, he is working full time at the Cushing V.A. Hospital in Framingham, "learning the ropes", as he puts it.

Dr. Elliott P. Joslin (*WM* 1895) was one of six Bostonians to be honored by the French Government at the Lafayette Day ceremonies, held at the French Consulate in Boston on May 20. The French Consul in Boston presented Dr. Joslin with the Cross of the Legion of Honor, for his work as a pioneer in diabetes research.

MASSACHUSETTS EYE & EAR INFIRMARY

One hundred forty-nine doctors took the practical examinations given by the American Board of Ophthalmology at the Infirmary, May 22-26. The Eye Clinic of the Infirmary swarmed with candidates and examiners as the four-day exams in Perimetry, Refraction, Ocular Motility, Histopathology, and External Diseases were given. Dr. Garrett L. Sullivan was in charge of local arrangements, and Dr. Robert Alpert was in charge at the Boston City Hospital where the exams in Ophthalmoscopy and Surgery were held. This was the first time in over a decade that the Boards had been held in Boston, and the group of candidates was the largest ever to be examined. The 12 regular members of the Board were assisted by 25 associate examiners from the New England and New York areas.

For three months preceding the exams, patients were being selected by the Eye Clinic staff to be used as subjects. In some instances as many as 80 patients were needed, and each patient was given free admission in return for his services.

The cooperation of the OPD and the Infirmary in closing the Eye Clinic and making space and equipment available, and of the Boston City Hospital for its efficient help in conducting the exams in Ophthalmoscopy and Practical Surgery resulted in the successful running of the Boards and made possible the examination of such a large number of candidates.

Dr. David G. Cogan, Director of the Howe Laboratory of Ophthalmology, will spend the summer in Los Alamos, New Mexico, investigating neutron-induced cataracts for the Atomic Energy Commission.

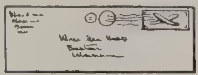
Dr. Parker Heath, Director of the Eye Pathology Laboratory of the Infirmary and President of the American Ophthalmological Society, presided at the Annual Meeting of the Society in Hot Springs, Virginia, June 1-3. Among the doctors who presented papers were four from the Infirmary staff: Drs. Paul A. Chandler, William P. Beetham, Trygve Gundersen, and David G. Cogan.

Dr. Robert J. Fink of Minneapolis began his residency in Ophthalmology on July 1. Dr. Fink graduated from the University of Minnesota Medical School and interned at St. Luke's Hospital in Chicago.

Dr. Morris Sherman finished his residency in Oto-Laryngology on July 1, and Dr. Thomas P. Cronin will complete his residency in Ophthalmology on July 31.

No. 25 in a series of Staff photographs
Dr. Walter Bauer—Physician—Director of the Robert W. Lovett Memorial for the Study of Crippling Disease

Dr. George Farrell Reed of Oswego, N. Y., began his residency in Oto-Laryngology on June 1. Dr. Reed graduated from Colgate University in 1944 and took his M.D. at Syracuse University College of Medicine in 1946. He served a rotating internship at the Syracuse Medical Center and then joined the Medical Corps of the Naval Reserve. Before taking his postgraduate course in Oto-Laryngology at Harvard, Dr. Reed was with the United States Public Health Department in Tampa, Florida.



A letter from Dr. John R. Graham says that, contrary to erroneous reports, he is to continue on as Assistant in Medicine at M.G.H. He writes:

> Unfortunately, recent newspaper articles made it appear as though I were stopping my work at the Massachusetts General when I assumed my new duties at the Faulkner Hospital, and I wish to correct this impression.
>
> During the past few years I have been the school physician at Milton Academy, a job which has required that I spend all my mornings out there. This has taken me away from the Massachusetts General a good deal, and it is partly in an effort to correct this situation that I have changed my affairs. I am giving up my position at Milton Academy during next year and have taken on the job of Chief of the Medical Service at the Faulkner Hospital so that I will have my activities a bit more centralized. I am by no means stopping my interests and activities at the Massachusetts General where I expect to see patients, have patients, and continue to conduct the Headache Clinic every Saturday morning. I am in great hopes that by rearranging my affairs in this way I will be able to get to more of the staff meetings, clinical conferences, and clinical pathological conferences at the General than has been possible in recent years.

We were very glad to receive this letter from Dr. Lytt I. Gardner (*CM* 1944).

> I have spent a very interesting year here at the University of North Carolina Medical School, participating in the teaching of the first and second year students and assisting in the state-wide Postgraduate Medical Courses sponsored by this institution.
>
> As you may know, this Medical School is in the process of expanding into a four-year school. The steel framework of the teaching hospital is nearly completed, and it is expected that clinical appointments will be made in the next year or two. A recent construction grant from the National Cancer Institute has provided for an additional floor which will be devoted to research laboratories. With an able and enthusiastic Dean and a generous Legislature, the way appears to be clear for the development of a first-rate Medical School.

Dr. Mariano M. Alimurung sends a new address—20 Apo Street, Sta. Mesa Heights, Quezon City, Philippine Islands—and writes:

> You may recall that I was a Graduate Fellow in Cardiology in Dr. Paul D. White's department, 1947-48. After that I continued on in Boston as Fellow in Medicine at the House of the Good Samaritan and the Children's Hospital, doing Cardiology. Now it is my turn to return to Manila.
>
> I came to Boston on September 17, 1947, as Fellow from the Santo Tomas University Faculty of Medicine in Manila, being the first scholar sent to America from my University after the war. I am returning to resume my job there as Assistant Professor of Medicine, and will probably be in charge of cardiovascular cases there.
>
> I shall write you from time to time from Manila, and I hope you will not fail to send me The News. I want to be a permanent subscriber, and thus continue to hear about the M.G.H.

A brief note has arrived from Dr. Abraham I. Perley (*r. p. D* 1948), bearing his new address—2030 Eleventh Avenue, South, Birmingham 5, Alabama. The note is signed "Anne and Jack Perley", and reads:

> Dear You-all,
>
> I am sure that receiving The News would ease this old nostalgia we feel so often. . . .

* * *

Newton Centre doctors will be especially interested in this item. Back in 1851, the year that saw the publication of Bowditch's *History of Massachusetts General Hospital,* 1811-1851, Dr. William Henry Thayer (Admitting Physician at M.G.H. from 1846 to 1849) wrote a letter to Bowditch acknowledging the receipt of his copy of the book and lauding particularly the section on ether. He says, in this regard:

> As to the subject of Ether, it was certainly a good thing to put on permanent record, as you have done, the share which Boston & the Hospital had in introducing it into the world. People in other parts of the country sneer at the attempt to identify the Hospital with the discovery of its applicability to surgery; but just so they were inclined to underrate its value and to deny that it could be used with safety. And I believe that to this day there is no part of the United States where Ether is used so freely as in Boston.

Dr. Thayer was one of those who witnessed that first public demonstration of the use of ether for major surgery, here in our Ether Dome, on October 16, 1846.

But the part of the letter that is of special interest to Newton Centre physicians is the postcript. Dr. Thayer had lived and practised in Boston, with an office at 12 Essex Street. Apparently, he had moved to Newton Centre only a short time before this letter was written, for the postscript reads:

> It will give you pleasure to hear that my business prospects are very good in this village, in which, altho' it is small, I am the only physician. With a better promise of living, I am of course in every other way happier & better off here than in Boston.

THE NEWS

MASSACHUSETTS GENERAL HOSPITAL 1811

No. 93 Boston, Mass. September 1950

CARCINOMA OF THE BLADDER: A CORRELATION OF PATHOLOGY WITH TREATMENT AND PROGNOSIS

(This study was aided by an Institutional Grant from the American Cancer Society (Massachusetts Division) to the Massachusetts General Hospital.)

The indications for the various procedures employed in the treatment of bladder tumors have never been clearly defined. Uncertainty as to whether local destruction, segmental resection, or cystectomy should be performed suggests that past indications have an insecure basis. Although some tumors have been controlled by these methods, many have not been cured. The indications for total cystectomy especially need clarification.

Invasion of the underlying muscle, as Jewett (1) has said, is an important feature of bladder tumors. On this fact, we believe, can be based intelligent treatment and more accurate prognosis. Muscle invasion may provide a better basis for treatment than indications previously given by us and by others. (2)

With these problems in mind, we have reviewed seven hundred bladder carcinomas treated at the Massachusetts General Hospital from 1934 to 1949. These tumors were studied to find out why some were easily cured and others were not. A review of their microscopic characteristics indicated that penetration into the bladder muscle might have more significance than the size, grade, or location of the tumor and whether it was papillary or non-papillary. *Any type* of tumor can invade the muscle and be termed infiltrating. We have tried to determine whether there is a correlation between muscle invasion of a tumor and the choice of treatment and prognosis.

The only tumors studied were those that provided us with sufficient material to give microscopic evidence that muscle invasion was or was not present. Clinical impressions of tumor invasion were considered inaccurate. Over-all statistics of cure have little value and are not included. The tumors of patients who could not be followed or who died in the hospital were omitted. The remaining tumors constitute a small group, but they form a sound basis for study since the end results are known and the tissue was secured by segmental resection, total cystectomy, or from neoplasms from which deep and adequate biopsies had been secured. Biopsies from the periphery of a tumor may be misleading, particularly regarding tumor penetration. One hundred thirty-five tumors with adequate pathological sections and follow-up were suitable for study.

From 1934 to 1949, ninety-eight total cystectomies for cancer of the bladder were done at the Massachusetts General Hospital. Eighteen of these patients died in the hospital — an operative mortality of about twenty percent. Of the remaining eighty cases, two could not be followed, thirty-three were too recent to be of value, and in eight the pathological material was not satisfactory. Thirty-seven cases of total cystectomy are included in the study.

Invasion of the regional lymph nodes by cancer of the bladder requires serious consideration. The tendency for these tumors to invade the lymphatics depends upon invasion of the deep layers of the bladder wall since there are no lymphatics in the mucosa. As far as we know, no tumor in this series that did not invade the muscle involved the regional lymph nodes. Forty percent of fifteen tumors that did invade the muscle and which were treated by cystectomy and pelvic lymphadenectomy involved the regional lymph nodes. Unless these lymph nodes are removed at the time of partial or total cystectomy, many of these patients are given no chance of cure.

We have prepared statistics which illustrate the results of treatment and the importance of tumor invasion of the bladder muscle. The five-year survival rates of patients who left the hospital alive and who were treated by methods other than cystectomy are as follows: Eighty-nine percent of the eighty-two patients whose tumors invaded the muscle were dead at the end of five years on an average of eleven months after operation. As far as we could determine, they all died of cancer. Nine, or eleven percent, were alive and well. Seven were treated by segmental resection. When the tumors did not invade the bladder muscle, the situation was different. All sixteen patients were alive and well five years after operation.

The following are the five-year survival rates of patients whose tumors were treated by cystectomy: Only two, or eight percent, of the twenty-five patients whose tumors invaded the muscle were alive. Both of these patients developed bony metastases at six years, and one has died. The twenty-three patients who died survived operation for an average of ten months. Nineteen of them, we know, died of cancer or the effects of operation. Two died from causes apparently unrelated to their tumors, and the cause of death in two was not determined. Five-year survivals of the twelve patients whose tumors did not invade the muscle and who were treated by cystectomy were two, or sixteen percent. Of the ten deaths in this group, five were from uremia, one from a cerebral accident, one from pneumonia, and three from uncertain causes.

Combining the two previous sets of figures, we find that the five-year survival rates when all forms of treatment were employed are: When the tumors invaded the muscle only eleven patients survived for five years. This is ten percent of one hundred seven patients. The end result, therefore, for these patients was essentially the same whether or not cystectomy was performed. In twenty-eight patients, the tumors did not invade the muscle and eighteen, or sixty-four percent, of them survived for five years. Cystectomy for these patients, therefore, resulted in a lower five-year survival rate than when cystectomy was not employed. As far as we could tell, the invasive or non-invasive tumors treated by cystectomy were very similar to those treated by other methods. When the muscle was invaded these figures show no significant difference between tumors treated by cystectomy and tumors treated by other methods with respect to grade or size of tumor or age of patient. This is true, also, of the non-invasive tumors that were treated by cystectomy or other methods.

SUMMARY

	Muscle invaded	
	Cystectomy	Non-cystectomy
No. of patients	25	82
Grade of tumor		
Grade 2	24%	19.5%
Grade 3	76%	80.5%
Size of tumor		
1-3 cm.	24%	25.6%
3 cm. or over	76%	74.4%
Mean age in years	60±1.5	63±1.1
	(standard error of the mean)	

	No invasion	
	Cystectomy	Non-cystectomy
No. of patients	12	16
Grade of tumor		
Grade 2	8.3%	6.2%
Grade 3	91.7%	93.8%
Size of tumor		
1-3 cm.	66.6%	75 %
3 cm. or over	33.4%	25 %
Mean age in years	57.3±1.4	62±2.5
	(standard error of the mean)	

These figures are based on a small group of tumors, but they are the result of a microscopic study of the invasive features of these tumors and are as accurate a follow-up as possible.

CONCLUSIONS

Invasion of the bladder muscle is an

important feature of bladder tumors. When there was no evidence of muscle invasion the five-year survival rate was sixty-four percent, and only ten percent when the muscle was invaded. The presence or absence of muscle invasion provides a guide to treatment and prognosis. Adequate biopsy must be obtained to determine whether or not the tumor invades the underlying muscle. Tumors that do not invade the muscle should be treated, if possible, by methods other than cystectomy. If the muscle is invaded, cystectomy may be considered. Tumors that invade the muscle are difficult to cure by any present methods of treatment.

Discussion, by Walter S. Kerr, Jr., M.D.

It has been noted that of fifteen patients with infiltrating tumors who have been treated by cystectomy and pelvic lymphadenectomy six (forty percent) have had microscopic evidence of metastatic disease in regional nodes. Although none of the patients in the thirty-seven cases of cystectomy mentioned in this report had pelvic lymphadenectomy, further mention of this aspect of the treatment of carcinoma of the bladder should be made.

Two years ago, dissection of the lymphatic tissue of the pelvis was added to the procedure of cystectomy in the hope that fewer patients would develop recurrences. Four of the patients with infiltrating tumors returned to the hospital on the average of five months after cystectomy and were explored. Three of these four patients were found to have recurrent disease and are now dead.

The node dissection as originally performed included removal of the tissue along the lower half of the common iliac vessels, external and internal iliac vessels, and in the obturator space. One patient had recurrent disease along the left common iliac vessels just below the aorta and around the left epigastric vessels, another had disease in the pelvis lateral to the rectum, and the third patient had recurrent tumor involving the left epigastric vessels and the peritoneum.

After these recurrences were found, the limits of the lymph node dissection were extended to include as much as possible of the lymphatic bearing tissue in the pelvis, from the lower portion of the aorta to the region of the rectum below the middle hemorrhoidal vessels. Patients who have had the more extensive operation have not been followed long enough to determine its efficacy. The one patient who did not have recurrence is alive, without evidence of disease, twenty-one months after operation. He did not have involvement of nodes.

If these patients develop recurrences in the pelvis, as I suspect they will, for one cannot do an adequate pelvic dissection without removing the rectum, we are faced with the same problem as are the surgeons attempting to cure cancer of the stomach. Will the rate of survivals of cancer of the stomach be increased by methods similar to those of Mr. Allison of England, who dissects the mediastinum, does a total gastrectomy, removes the spleen and a large part of the pancreas, in order to remove known sites of lymphatics draining the stomach? Will we be justified in removing the rectum in order to enable us to remove lymphatics to which bladder carcinoma may spread? I don't believe so, for it is likely that the mutilation of function, the disability, and the mortality and morbidity of such an extensive procedure will outweigh the occasional satisfactory result.

WILLIAM NELSON MUNDY, III

The tragic highway accident on June 29, that claimed the lives of Dr. William N. Mundy, III, his wife, and their three small children, came as a saddening shock to all of us who knew them.

Dr. Mundy was born in Toledo, Ohio, on August 12, 1917, and spent his boyhood there. After receiving his A.B. degree from the University of Michigan in 1939, he came to Boston and spent the next four years at the Harvard Medical School, from which he graduated in February 1943.

Following graduation, Dr. Mundy became a Medical House Officer at the Massachusetts General Hospital. In July 1944 he was promoted to Assistant Resident in Medicine and served in that capacity until October 1944. It was during this period that many of us came to know him well. It was here, too, that he met and married Virginia Hussey, who had completed her student nursing at M.G.H.

After leaving Boston, Dr. Mundy spent a year as Clinical and Research Fellow in Medicine at Barnes Hospital in St. Louis. Following this, he returned to Toledo to join his father in the practice of Medicine.

In his few years of practice in Toledo he had already proved his worth to the community he served. He was very highly regarded by his medical colleagues, and had been an active member of the Toledo Academy of Medicine. As Chairman of its Program Committee during the past year, he maintained an educational program designed to keep the practitioner abreast of new developments in Medicine. His program flourished.

Among the many qualities which endeared Bill to his friends were his robust good humor, his perpetual and infectious optimism, his sincerity and loyalty to his friends, and his ever-ready willingness to pitch in and lend a helping hand. He was justly very popular among his fellows on the House Staff.

At a time when much of the chaos in the world seems to be due to a lack of the fine traits of character that abounded in Bill Mundy, his untimely passing is an especially heavy loss.

A. L.

* * *

The first International Congress of Cardiology will meet at the Sorbonne in Paris, September 3-9, under high patronage of the President of France.

The Massachusetts General Hospital is represented on the program by the following papers:

(1) International cardiovascular research. Paul D. White.
(2) Rheumatic fever and rheumatic heart disease: A twenty-year report on 1,000 patients followed since childhood. Edward F. Bland and T. Duckett Jones.
(3) Acute non-specific pericarditis: Clinical, laboratory, and follow-up considerations. Howard B. Sprague and David B. Carmichael.
(4) Systemic arterial embolism in rheumatic heart disease. Raymond Daley, Thomas W. Mattingly, C. Lawrence Holt, Edward F. Bland, and Paul D. White.
(5) Observations on the administration of ammonium cation exchange resin to patients with cardiac edema. James H. Currens, Timothy B. Counihan, and Margaret Rourke.
(6) The electrocardiogram as a guide to intracellular potassium concentration. James H. Currens, Ernest Craige, and John D. Crawford.
(7) Present evidence concerning the relationship of the cerebral cortex and/or subcortical areas to the regulation of blood pressure and heart rate in man. William P. Chapman, Hannibal Hamlin, Donald Freshwater, Robert B. Livingston, William H. Sweet, and James L. Poppen.
(8) Physiological and physical laws that govern the clinical appreciation of cardiac thrills. Timothy B. Counihan, Maurice B. Rappaport, and Howard B. Sprague.
(9) Some morphological, hormonal, biochemical, and psychological aspects of the young coronary patient. Menard M. Gertler and Stanley M. Garn.

Dr. Arthur W. Allen, formerly Chief of our East Surgical Service and now a member of our Board of Consultation, has returned from Europe. In response to our appeal for details concerning his trip, Dr. Allen has kindly sent us the following letter:

> The prime motive of my journey this time was to represent the American College of Surgeons with a congratulatory address before the Royal College of Surgeons of England on their One Hundred Fiftieth Anniversary. This was a very interesting, dignified, and impressive ceremony. Some thirty-four universities and colleges sent special representatives, with formal greetings. I am sending you an account of the affair, published in the *Annals of the Royal College of Surgeons of England*, for your interest.
>
> Having been made an Honorary Fellow of the Royal College of Surgeons in 1947, at the time I gave the Moynihan Lecture, I was eligible for selection as a Hunterian lecturer. Only Fellows of the Royal College may receive this honor. The lecture took place at five o'clock in the afternoon of June 27, at the College, and that evening the reception and dinner of the One Hundred Fiftieth Aniversary took place.

It was very kind of the officers of the Royal College of Surgeons of Edinburgh, established in 1505, to take cognizance of my visit to Europe to invite me to give the Macarthur Lecture there on June 30. This took place at two o'clock in the afternoon, and that evening, at a dinner ceremony, the Royal College bestowed upon me an Honorary Fellowship. It must be assumed that I received these honors largely because I am Chairman of the Board of Regents of the American College of Surgeons, and of course I could never have been that, had I not had the opportunity of serving the Massachusetts General Hospital throughout my professional life.

Since I had long been interested in studying the various medical plans in Europe, this seemed too good an opportunity to miss, and so, in addition to England and Scotland, I had a bird's-eye view of the situation in Denmark, Norway, Sweden, and Switzerland. In each of these countries I met many interesting people, and found them cordial and willing to give me honest opinions.

As far as the Socialized Medicine Plans are concerned, I wish to say that our problems here in the United States are so vastly different from those in these smaller, closely compact countries, that I know it will require a good deal of time and ingenuity to adopt the good principles from these plans. I would hope that we might avoid some of the mistakes that have been made, particularly in the British Isles.

[Although no reference is made to social affairs in this letter, we learned from outside sources that Queen Mary again honored Dr. and Mrs. Allen by a very pleasant interview, and also that they were entertained by Prince Olaf and Princess Martha of Norway. *Editor*]

Dr. James C. White, Chief of Neurosurgery at M.G.H., gave the following lectures during a recent trip to England, Scotland, and France:

May 4—to Professor John Z. Young's students in anatomy at University College, London: "Applications of neuroanatomy to the relief of pain in resistant neuralgias and in visceral disease".

May 8—Rutherford-Morison Lecture at the University of Durham: "Neurosurgical treatment of persistent pain".

May 10—Macarthur Lecture at the University of Edinburgh: "Neurosurgical experience in the treatment of intractable pain".

May 19—at the meeting of the Society of British Neurological Surgeons in Manchester: "241 cordotomies: Results, complications, causes of failure".

June 15—at the meeting of the Société de Chirurgie of Lyon: "Valeur de la cordotomie antérolatérale (sur 210 observations)".

Dr. Oliver Cope, Visiting Surgeon on our staff, returned in July from a two-months' trek abroad with his family. The reason behind the trip was an invitation to lecture at an Endocrine Conference in Toulouse in May. MGH readers will be interested to know that Dr. Harold P. Himsworth, formerly Professor of Medicine at University College Hospital and now Secretary of the Medical Research Council of Great Britain, also attended. Both he and Dr. Cope were especially honored by being awarded the degree of Doctor Honoris Causa by the University of Toulouse. Dr. Himsworth lectured on diabetes; Dr. Cope on diseases of the thyroid and parathyroid glands.

After Toulouse, the Copes enjoyed a week at the Bach Festival at Prades, and from there they went on to visit Switzerland, Belgium, and England.

Dr. Benjamin Castleman, Pathologist at M.G.H., spent the month of July as Visiting Professor of Pathology at the University of Brazil in Rio de Janeiro. While there, both Dr. and Mrs. Castleman were royally entertained by the Cariocan physicians — and especially by the Paulo Albuquerques (*r.s. U* 1944), who wish to be remembered to all their Boston friends.

At the Fourth Annual Meeting of the American Electroencephalographic Society, held in Atlantic City on June 10 and 11, the following officers were elected for the ensuing year: President — Robert S. Schwab, M.D., Massachusetts General Hospital, Boston 14, Mass.; Vice-President — James L. O'Leary, M.D., Washington University School of Medicine, St. Louis, Mo.; Treasurer — Mary A. B. Brazier, Ph.D., Massachusetts General Hospital; Secretary — John A. Abbott, M.D., Massachusetts General Hospital; elected to the Council: Dr. Charles E. Henry, Institute of Living, Hartford, Conn.

Brief bits:—

Dr. Lytt I. Gardner (*CM* 1944) has been appointed Assistant Professor of Pediatrics at the Johns Hopkins University Medical School. Dr. Gardner has also been appointed Pediatrician to the Johns Hopkins Hospital. His new address is Harriet Lane Home, Johns Hopkins Hospital, Baltimore 5, Md.

Dr. Daniel J. Holland (*Dn.* 1938), Assistant Oral Surgeon on our staff, has been appointed Professor of Oral Surgery and Director of the Department at Tufts College Dental School. Dr. Holland will continue on our staff, along with his new duties.

Miss Lucy G. Morse, formerly Head of our Occupational Therapy Department, who has been teaching at the Liverpool School of Occupational Therapy in England, has returned home. Her address is 19 Craigie St., Cambridge, Mass.

An exciting package arrived recently from Dr. David Stafford-Clark of England, who served on our staff as Assistant Resident in Psychiatry for a few months in 1949 and as Clinical Fellow in Psychiatry during the first part of 1950. The package contained an interesting letter; captivating photographs of his two youngest children; copies of five issues of *Guy's Hospital Gazette*, containing a running account of Dr. Stafford-Clark's sojourn in America, which he calls "The third journey"; and (at our request) one of the earlier published collections of his poems, which he had great difficulty in procuring for us, since it has been out of print for five years. We are planning on publishing extracts from the *Gazette* articles in an early issue of THE NEWS.

Dr. Somers H. Sturgis (*ES* 1933), Assistant Surgeon on our staff and in charge of the Vincent Memorial Laboratory, has been appointed Senior Associate in Surgery at the Peter Bent Brigham Hospital. Dr. Sturgis will assume his new duties on January 1, which include heading up a teaching and research unit in gynecology and female endocrinology. He will continue in private practice, with an office at the Peter Bent Brigham Hospital.

Mrs. Soma Weiss has been appointed Advisor on Community Relations at M.G.H. Mrs. Weiss is thoroughly familiar with the functions of voluntary hospitals through her long association with the Peter Bent Brigham Hospital.

Dr. Edward L. Young (*W S* 1910), a member of our Board of Consultation, has been appointed Surgeon-in-Chief of the New England Hospital for Women and Children. Dr. Young is the first male physician ever to have been appointed to the active staff of the New England Hospital.

The Board of Trustees, at their meetings on June 16 and 30 and on July 14, voted:

To accept with regret the resignation of Dr. Joseph S. Lichty as Assistant Director, effective July 15;

To authorize Dr. Churchill to invite Professor F. A. R. Stammers of Birmingham, England, to serve as Visiting Surgeon pro tem for approximately four weeks in September and October;

To change the title of Drs. Robert K. Crane, J. Delafield Gregory, and G. David Novelli from that of Assistant in Biochemistry to that of Assistant in Biochemical Research;

To promote Dr. Ernest Craige from the position of Clinical and Research Fellow in Medicine to Assistant in Medicine.

To appoint:

Dr. Samuel Brendler as Assistant Resident in Neurosurgery for one year, beginning July 1;

Dr. Richard E. Spencer as Assistant Resident in Anesthesia for one year, beginning August 15;

Dr. William H. Trethowan as Assistant Resident in Psychiatry for six months, beginning January 1, 1951;

Dr. A. Allison Wills as Clinical Associate in Medicine.

At their meetings during June and on July 12, the General Executive Committee voted:

To continue Dr. Elmer Franseen as Clinical Assistant in Orthopedic Surgery for one year, beginning August 1;

To change Dr. William E. Reynolds's title from Research Fellow in Medicine to Clinical and Research Fellow in Medicine, as of July 1;

To reappoint Dr. Bartlett H. Stone as Clinical Assistant in Surgery, assigned to Gynecology.

To promote:

Dr. Glenn E. Behringer from the position of Second Assistant Resident to that of First Assistant Resident on the Surgical Service, as of July 1;

Dr. Armand L. Bengle to the position of Resident in Anesthesia, beginning August 1; the Committee also voted to appoint Dr. Bengle as Clinical and Research Fellow in Anesthesia for one year, beginning August 1, to carry out studies, apart from his duties as Resident, concerning the metabolic effect of anesthesia;

Dr. Richard A. Currie from the position of Intern to that of Third Assistant Resident on the Surgical Service;

Dr. Thomas H. Green, Jr., from Third Assistant Resident to Second Assistant Resident on the Surgical Service;

Dr. Adolph L. Gundersen from the position of Intern to that of Third Assistant Resident on the Surgical Service;

Dr. Falls B. Hershey from the position of Second Assistant Resident to that of First Assistant Resident on the Surgical Service, as of July 1;

Dr. John H. Kennedy from the position of Intern to that of Third Assistant Resident on the Surgical Service;

Dr. James A. Martin to the position of Resident in Radiology, beginning July 1;

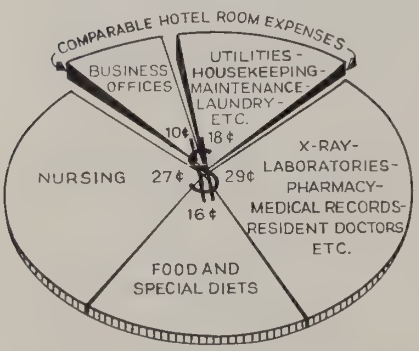
Dr. John D. Pitts to the position of Third Assistant Resident on the Surgical Service, beginning July 1;

Dr. Robb H. Rutledge from the position of Intern to that of Third Assistant Resident on the Surgical Service, as of July 1;
Dr. Boris Senior to the position of Assistant Resident on the Children's Medical Service for one year, beginning July 1;
Dr. Robert S. Shaw from the position of Second Assistant Resident to First Assistant Resident on the Surgical Service, as of July 1;
Dr. John L. Sosman to the position of First Assistant Resident in Radiology, beginning July 1;
Dr. Clifford J. Straehley, Jr. from Third Assistant Resident to Second Assistant Resident on the Surgical Service.

To appoint:

Dr. William H. Baker as Clinical and Research Fellow in Medicine, assigned to the Tumor Clinic, as of July 1;
Dr. Ellis N. Cohen as Clinical and Research Fellow in Anesthesia for one year, beginning September 1;
Dr. Allan L. Friedlich, Jr. as Clinical and Research Fellow in Medicine, beginning July 1;
Dr. Philip H. Henneman as Research Fellow in Medicine, as of July 1;
Dr. Arthur Keats as Research Fellow in Anesthesia for July and August; Dr. Keats was granted leave of absence from his position as Assistant Resident in Anesthesia for this work;
Dr. Edmund N. Kudarauskas as Clinical Fellow in Psychiatry, as of July 1;
Dr. Cornelius Lansing as Clinical and Research Fellow on the Pediatric Service for one year, beginning July 1;
Dr. Roy W. Leeper as Clinical Fellow in Dermatology, as of July 1;
Dr. Saul W. Levy as Clinical and Research Fellow in Dermatology, as of July 1;
Dr. Erasmus J. McCranie as Clinical Fellow in Psychiatry, as of July 1;
Dr. Albert Maysles as Research Fellow in Anesthesia for one year, beginning July 15;
Dr. Leon G. Michell as Clinical Assistant in Surgery, assigned to Gynecology;
Dr. Carlyle F. Stout as Clinical and Research Fellow in Medicine, as of July 1;
Dr. William H. Thomas as Clinical and Research Fellow in Medicine, as of July 1.

WHERE THE HOSPITAL SPENDS EACH DOLLAR



Occasionally people try to compare hotel and hospital costs. But, as the diagram shows, this is impossible because almost three-quarters of hospital expenses are for services not provided routinely in a hotel room.

People say that modern medical care is expensive. It is! Although this isn't in the diagram, there is good reason—

Modern medical care requires:
Two professional and non-professional employees per patient,
plus
Expensive scientific procedures, medicines, and equipment.

MASSACHUSETTS EYE & EAR INFIRMARY

In the past, it was often the custom for professional men from the United States to study in Europe under the great leaders of medicine, law, and science. Now the trend seems to be reversed and we find many people from foreign countries coming here, studying our methods and procedures, and returning to their own countries to put into practice what they have learned. The *Visitors' Book* at the Infirmary proves that Asia, Africa, and South America are as widely represented as Europe.

Recently, we had an observer from Brazil — Señorita Maria de Lourdes Duarte Gonçalves — who was sent to the U. S. by the Ministry of Education of the Brazilian Government to study programs for the blind and to observe admitting procedures in hospitals and clinics. For the past ten months, Señorita Gonçalves has been studying at the Perkins Institution, and finished her stay in Boston by spending a week at the Infirmary in the clinics, admitting offices, and library, and inspecting the new construction — particularly the operating room suites.

Señorita Gonçalves reported on the new Ophthalmological Institute, comprising hospital, clinics, and school for the blind that the government has built for the Brazilian people. The integration of these three units in a smooth-working order was the concern of the government. It was interesting to compare fields of emphasis in types of blindness in Brazil with those in the U. S. According to Señorita Gonçalves, most of the population of Brazil is born in rural homes where there may be no attending physician and, though the government has tried to educate the people to the use of silver nitrate to prevent blindness from gonorrhea, the percentage of such blindness is very high. On the other hand, there is little retrolental fibroplasia because few premature babies born in rural districts survive. It was while teaching in these rural areas that Señorita Gonçalves became interested in the rehabilitation of the blind child.

Dr. John H. Tucci, Assistant Anesthetist, gave a lecture on "Intra-tracheal anesthesia", with an accompanying motion picture, at the Norwood Hospital Association meeting on June 27.

"Anesthesia for ocular surgery" was the subject of a symposium at the New England Society of Anesthetists, held June 12 at Boston University School of Medicine. Dr. Edwin B. Dunphy, Chief of Eye Service, Dr. Paul A. Chandler, Surgeon in Ophthalmology, and Dr. John H. Tucci were the speakers.

Dr. LeRoy A. Schall, Chief of the Ear, Nose and Throat Service, and Dr. Philip E. Meltzer, Surgeon in Oto-Laryngology and Surgeon-in-Chief of the Winthrop Foundation, were recent lecturers at the University of Minnesota Medical School in Minneapolis. Dr. Schall delivered two lectures on cancer to a postgraduate group, and Mr. Meltzer spoke on "Hearing tests and their interpretations".

Miss Ruth Butler, case work supervisor in the Social Service Department, is leaving her position to become Associate Professor of Social Research at the Harvard School of Public Health. Miss Butler has been with the Department for six years.

The Infirmary was recently privileged to see a showing of colored films of the English countryside, given by Dr. Geoffrey Morey of the Lincoln County Hospital, Lincolnshire, England. Dr. Morey, traveling on a Fulbright Scholarship, has visited many hospitals and clinics in the United States and Canada, where he has studied operating room techniques in Oto-Laryngology. He came to the Infirmary at the invitation of Dr. LeRoy A. Schall, who met Dr. Morey last year in London at the International Conference of Oto-Laryngologists.

Dr. Morey showed two films — one of Lincoln Cathedral, depicting the architecture with details of the stone work, and another of the English countryside entitled "The changing seasons". Both films were kodachrome and the narration for the Cathedral picture was done by Dr. Morey, supplemented by a musical accompaniment.

STAFF PUBLICATIONS

A new procedure regarding the publication of titles of articles and books written by members of the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary staffs went into effect with the July—August issue of THE NEWS. Each month, titles of new publications will appear in THE NEWS. If you have not already done so, please send all titles of books and articles you have published since (and including) January 1, 1950, to Cora F. Holbrook, Editor of THE NEWS, and continue to send her all new titles each month.

As soon as the December titles have appeared in the January 1951 issue of THE NEWS, the lists will be assembled and published as the Massachusetts General Hospital—Massachusetts Eye and Ear Infirmary Publications for the calendar year 1950. Should you fail to report a title to THE NEWS, it will not appear in the assembled list.

Be sure to include complete data: 1) classification of material, such as Anesthesia, General Medicine, Laboratory Science, General Orthopedics, Orthopedic Surgery, Miscellaneous; 2) title of article; 3) title of publication in which it appears, together with the volume number and page numbers. For books, give the publisher's name and address.

Please pay special attention to 1), above. Several of the reports already received have not included the classifications of the material. In such instances where the titles failed to make the classifications obvious, much time has had to be spent on examining the material or tracking down the authors to procure this information.

The deadline date for each issue of THE NEWS is the 12th of the preceding month.

All requests for reprints are to go directly to the individual authors, and *not* to Treadwell Library nor to THE NEWS.

The following titles have been submitted, in addition to those published in the July—August issue:

Anesthesia

Beecher, H. K.
Anesthesia and the old-time shotgun prescription. (Editorial)
Ann. Surg. 131:606-607.

Beecher, H. K., Francis, L., and Anfinsen, C. B.
Metabolic effects of anesthesia in man. I. Acid-base balance during ether anesthesia.
J. Pharmacol. & Exper. Therap. 98:38-44.

Beecher, H. K., and Murphy, A. J.
Acidosis during thoracic surgery.
J. Thoracic Surg. 19:50-70.

Cardiology

Currens, J. H.
Common cardiac conditions in the young male adult.
J. Aviation Med. 21:259-264.

Dermatology

Cipollaro, A. C., and Crawford, G. M.
Radiation therapy of nonmalignant skin diseases.
In Clinical therapeutic radiology, New York, Thomas Nelson & Sons, pp. 608-643.

Lever, W. F., and Leeper, R. W.
Eosinophilic granuloma of the skin: Report of cases representing the two different diseases described as eosinophilic granuloma.
Arch. Dermat. & Syph. 62:85-96.

General Surgery

Green, T. H., Jr.
Low ileal obstruction: With report of closed-loop type case.
Med. Bull. EUCOM 7:411-414.

Mallory, T. B., Simeone, F. A., Sullivan, E. R., Burnett, C. H., Shapiro, S. L., Smith, L. D., and Beecher, H. K.
Pigment mobilization in severely wounded men.
Surgery 27:467-484.

Moore, F. D., Langohr, J. L., Ingebretsen, M., and Cope, O.
The role of exudate losses in the protein and electrolyte imbalance of burned patients.
Ann. Surg. 132:1-19.

Simeone, F. A., Mallory, T. B., Burnett, C. H., Shapiro, S. L., Beecher, H. K., Sullivan, E. R., and Smith, L. D.
The crush syndrome in battle casualties.
Surgery 27:300-319.

Welch, C. E.
The care of the patient with advanced cancer.
In Cancer—A manual for practitioners, 2d Edition, Boston, American Cancer Society (Mass. Div.) Inc., pp. 269-280.

Welch, C. E., and Giddings, W. P.
Abdominal trauma—A clinical study of 200 consecutive cases from the Massachusetts General Hospital.
Am. J. Surg. 79:252-258.

Gynecology and Obstetrics

Bell, J. W., and Ingersoll, F. M.
An evaluation of the symptoms and signs in ectopic pregnancy, based on an analysis of 130 cases.
Am. J. Obst. & Gynec. 60:174-179.

Dr. Alfred Yankauer, Jr. (*CM* 1941), Box 796, c/o Postmaster, Rochester, N. Y.

This nice letter has come from Dr. Clarke T. Case (*WS* 1943).

After being buried in my cocoon of surgical training all these years, I am finally emerging to see whether I am a caterpillar or a butterfly. At last my formal surgical training is completed, and now I am just starting to learn the art of surgical practice. Just a few days ago I opened my office here at 270 Genesee Street in Utica, N. Y. for the practice of General Surgery. While I still have plenty of time on my hands, I am writing to inform you of my recent activities.

The first of July of this year I finished my tenure as Chief Resident in Surgery at Ohio State University Hospital under the capable direction of Dr. Robert M. Zollinger, formerly of the Peter Bent Brigham. I spent a total of three years at Ohio State, toiling up the surgical ladder. I passed Part I of my Surgical Boards in March 1950. In the same month the University pressed the switch and gave me a Master's degree in Surgery for some investigation I had conducted on various jejunostomy feeding mixtures. So I have diplomas galore to gild my office walls, but still have to figure out the system to get the patients to wear a path to my door!

Our family kept growing steadily during my sojourn in Columbus. We now have three daughters aged five, one and a half, and one-twelfth years. There is never a dull moment at home, with those three active ones under foot, if not on top of a bureau. All the family has been healthy, which is our greatest source of thanks.

I frequently see my classmate and fellow MGH alumnus, Brad Millet (*WS* 1943) around the hospitals. This is a pleasant change from the sea of unfamiliar faces. He is building an excellent reputation for himself.

I am starting my subscription to the MGH News once again. In this way I hope to keep more closely in touch with what is going on at the General.

A letter from Kenneth P. Nash (*r. Psychi.* 1949) says, in part:

I am enjoying my copies of The News, which I am receiving regularly. It is indeed a pleasure to read about the many activities at M.G.H. and about my many friends there. I was very sorry to have to leave before my year was up, but I did have a wonderful six-months' residency, and I shall remember my time at M.G.H. with deep feelings.

I am on the staff of Las Encinas Sanitarium in Pasadena and am enjoying the work immensely.

On the back of a card from Dr. William G. Kuhn, Jr. (*a.r.s. Or.* 1949), announcing the opening of his office for the practice of Orthopedic Surgery for adults and children, at 116 Livingston Avenue, New Brunswick, New Jersey, is this short note:

As you can see, I have finally faced the cold, cruel world. Left M.G.H. in July '49, for one year at Boston City Hospital as Chief Resident in Orthopedic Surgery. Now firmly entrenched back in my home town, and am looking forward to keeping in touch with Boston through the MGH News.

This letter from Dr. Hugh A. MacMillan, Jr. (~~*a.r.p. P* 1950~~), headed 743 Corona Street, Denver, Colorado, was most welcome.

The News continues to keep us closely in touch with M.G.H. and alumni affairs on a world-wide basis. Your interest and effort are much appreciated by every one of us.

Those of us living in Denver have been extremely fortunate in the past year to have seen many of the MGH surgical staff, including Drs. Churchill, Allen, Cope, Cannon, Sweet, Smith-Petersen, Scannell, Soutter, and Taylor at various medical meetings here and in Colorado Springs.

Our most recent Denver visitors were Dr. and Mrs. Grantley Taylor. We persuaded them to stay a few days and take a mountain trip with us which consisted of crossing the continental divide five times. We spent two nights at St. Mary's Glacier Lodge (elevation 10,000 feet), where Grantley immortalized the local scenery with his landscape artistry. After three days of hiking, riding, and fishing we emerged from the Rockies to enjoy a Gershwin concert at Red Rock Theatre as the finale to a most enjoyable reunion.

It is always a genuine pleasure to have Bostonians in Denver and to show them why we are so enthusiastic about the West.

The News

No. 94 Boston, Mass. October 1950

DENTAL SERVICE AFFAIRS

Most of the activities of the Dental Service occur in the Dental Clinic. The name of this clinic would usually denote a place where fillings and other restorative dental procedures are carried out. Thirty years ago an unsuccessful attempt was made to organize a dental clinic along these lines at this hospital. Because of the high incidence of dental disease there is no doubt that the need exists. In order to satisfy such a need, even to a small degree, some expansion of space, expenditures for equipment, and enlargement of the staff would be required. This may be desirable to some extent in the future. At present the Dental Clinic seems to be functioning totally as a health service, concerned with the care of patients in whom diseases of the oral cavity and related structures exist, for which the diagnosis and treatment require special interests as well as special knowledge. With this purpose, therefore, the clinic is organized with a large visiting staff skilled in caring for the surgical conditions arising in the ambulant patient, two interns, a nurse, a full-time dentist who has had considerable hospital experience, and the Chief of the Service. It is believed that the patient is benefited by such an organization. Most of the patients are referred from other clinics, and for the most part they are representative of the local community.

Patients seen in the Dental Clinic have a variety of complaints for which they seek relief. Pain and infection arising from diseased teeth are common. Swellings involving the oral and related structures are frequent. Disturbances of the soft tissues of the oral cavity, diseases of the salivary glands, and traumatic conditions make up the balance. In many instances the Dental Clinic acts as a clearinghouse from which the patients, after thorough study, are referred to the services most capable of handling the cases. In this way the Dental Clinic has the opportunity to offer to the resident staff and students training in recognizing the desirability of consultation, as well as the realization of some limitations in the care of these patients. Since any or all of the above disease states are common, it then follows that many of the conditions seen are manifestations of, or are coincidental with, the patients' general physical status.

It is interesting to review the types of cases seen in the Dental Clinic. Some of the patients are new, but most of them find their way to this clinic as referred cases. Most of the patients in the morning Dental Clinic require some surgical procedure. All require study, and some patients have been seen primarily on a consulting basis. The intern, therefore, has many opportunities to acquire diagnostic acumen, as well as skill and judgment in the care of patients. Most of the patients are ambulatory, and those who cannot be treated as such are admitted to the house on the Surgical Service and under the guidance of that service. In the house and under supervision, the intern on the Dental Service, along with members of the surgical teams, assumes responsibility for the care of the patient. Those surgical procedures which fall into the category of oral surgery are taken care of by a senior member of the Dental Service and interns. When one evaluates the care received by the patient, together with the training made available to the interns, it would appear that the development of this service is justified. Those house officers who have finished their training here and have gone elsewhere to private practice and to institutional work are well equipped. There is no doubt that the students of the Harvard School of Dental Medicine have benefited by their experiences at the hospital. There have been four medical students who have elected a one-month voluntary course with our department. The reaction of these students has been one of approval, since up until now there was no provision in their curriculum for learning the variety of easily recognizable abnormalities to which the entrance of the gastro-intestinal tract is subjected.

While this department has been progressing in many ways, one serious deterrent arose this past year. It was caused by a lack of a sufficient number of patients admitted to the clinic and undoubtedly was due to the increasing cost for admission and treatment. In the past several months, however, improvement in this respect has been noted, and once again the stimulus to the visiting men and house staff is becoming apparent.

No great strides in investigative work have been made. However, with the appointment of a full-time assistant, plans are well under way for carrying on investigations regarding abnormal bleeding, studies in herpetic stomatitis, and diseases of the salivary glands. Because of the lack of laboratory facilities in the hospital, some of this work will be done in the laboratories of the Harvard School of Dental Medicine.

David Weisberger, M.D., D.M.D.,
Oral Surgeon and Chief of Dental Service

In a folder prepared for those who come to volunteer their services at M.G.H. is a page titled "Selected MGH statistics". Everyone familiar with the Massachusetts General Hospital is aware of the acres of floor space and the hundreds of workers, professional and non-professional, who are on the hospital roster. In spite of this knowledge, the data assembled here in this folder for volunteers are nothing short of arresting, and we believe every reader of THE NEWS will be amazed at some of the figures given. Here they are:

Patients: About 900 bed patients
About 650 out-patients per day
Members of the MGH family who give their services:
  65 members of the Corporation
  12 Trustees
  20 members of the Ladies' Advisory Committee of the Nursing School
  61 members of the Ladies' Visiting Committee
  250 volunteers
  450 members of the Visiting Staff (physicians)
Those who are in training and receive nominal or no salaries:
  330 physicians
  400 student nurses
Salaried personnel: 2,000
Selected functions of members of the MGH family:
  To nurse our patients requires 700 graduate and student nurses.
  To maintain our buildings and equipment requires 131 men.
  To clean our buildings requires 185 men and women.
  To fill our prescriptions requires 18 pharmacists.
  To wash our linens daily requires 60 men and women.

To keep our 7,500 light bulbs replaced requires 2 men working steadily.

FINANCES

$6,500,000 was spent for patient care in 1949. Of this, $1,200,000 was spent on patients who could not pay for medical care.

To pay this $1,200,000 the Trustees used $680,000 obtained from interest on the endowment fund, $220,000 from the Community Fund, and had to liquidate $300,000 of endowment assets. (This $300,000 represents a permanent loss to the hospital's ability to pay for future medical care of the community and is our gift to the community above and beyond the amount given to us in 1949.)

In addition, $1,300,000 was expended for research. This was paid entirely by government grants, foundations, industrial corporations, and individuals. None of this money was available for patients' care, and no patient was charged for research expense.

* * *

On October 18, the Boston Medical Library will celebrate the seventy-fifth anniversary of its foundation.

Two ground floor rooms were opened as a library on Hamilton Place, for the use of Boston physicians, on Monday, October 18, 1875, with James Read Chadwick as Librarian, E. H. Brigham as Assistant Librarian in charge, and Oliver Wendell Holmes as President of the new association. The present building was occupied in 1900.

Long associated with the Library is *The New England Journal of Medicine,* formerly *The Boston Medical and Surgical Journal,* and, more recently, *The Journal of Bone and Joint Surgery.* The Massachusetts Medical Society is housed in the present building and this year has acquired the adjacent property as a permanent home.

To mark its birthday, the Library will hold "open house" on October 18, with a scientific session and a dinner.

The Board of Trustees, at their meeting on August 18, voted:

To accept the resignation of Mrs. Arthur W. Bell from the Advisory Committee to the School of Nursing with great regret and deep appreciation of her many years of service;

To accept with regret the resignation of Dr. F. Chester Durant as Dental Surgeon and to appoint him to the Board of Consultation, effective July 1;

To accept the resignation of Dr. Fiorindo A. Simeone as Assistant Surgeon with great regret and congratulations on his new position;

To accept the resignation of Dr. John H. Tucci as Assistant Anesthetist, effective September 24.

To appoint:

Dr. Winston E. Cochran as Assistant Resident on the Children's Medical Service, beginning October 1, 1951;

Dr. Lewis Francis as Assistant Anesthetist, effective July 20;

Dr. Saul W. Levy as Assistant Resident in Dermatology, effective August 18;

Dr. Maurice M. Osborne, Jr. as Assistant Resident on the Children's Medical Service, beginning July 1, 1951;

Dr. George S. Richardson as Third Assistant Resident in Surgery, effective August 1.

At their meetings on August 16 and September 6, and at a hitherto unreported meeting, the General Executive Committee voted:

To promote:

Dr. Doris R. Bennett from the position of Intern to that of Assistant Resident on the Children's Medical Service, beginning July 1, 1951;

Dr. Nathaniel J. Ehrenkranz from the position of Intern to that of Assistant Resident on the Medical Service for one year, beginning July 1;

Dr. William F. Fritz from the position of Intern to that of Assistant Resident on the Medical Service for one year, beginning October 15;

Dr. David Kahn from First Assistant Resident to Resident in Pathology, beginning July 1;

Dr. Gerald A. Kerrigan to the position of Chief Resident on the Children's Medical Service, beginning July 1, 1951;

Dr. Craig S. Lichtenwalner from the position of Intern to that of Assistant Resident on the Medical Service for one year, beginning October 15;

Dr. Herbert B. Locksley from the position of Intern to that of Third Assistant Resident in Surgery, as of July 1;

Dr. William R. Owen from the position of Intern to that of Assistant Resident on the Medical Service for one year, beginning October 15;

Dr. Walter T. St. Goar from the position of Intern to that of Assistant Resident on the Medical Service for one year, beginning July 1;

Dr. Guillermo C. Sanchez from the position of Intern to that of Assistant Resident on the Medical Service for one year, beginning October 7;

Dr. Robert T. Sceery from the position of Intern to that of Assistant Resident on the Children's Medical Service, beginning July 1, 1951;

Dr. John D. Stoeckle from the position of Assistant Resident to that of Resident on the Medical Service, beginning January 1, 1951;

Dr. Laurens P. White from the position of Intern to that of Assistant Resident on the Medical Service for one year, beginning October 15;

Dr. James B. Wyngaarden from the position of Assistant Resident to that of Resident on the Medical Service, beginning January 1, 1951.

To continue the appointments of:

Dr. Charles H. DuToit as Clinical and Research Fellow in Medicine for the period of July 1 through December 31;

Dr. Richard E. Goldsmith as Clinical and Research Fellow in Medicine for the period of July 1 through December 31;

Dr. Keh-Wei Huang as Research Fellow in Neuropathology for the period of July 1 through October 31;

Dr. Ruth E. Stauffer as Clinical Fellow in Neuropathology for the period of July 1 through December 31;

Dr. William H. Timberlake as Clinical Fellow in Neurology for the period of July 1, 1950 through June 30, 1951;

Dr. Aero H. Valanne as Clinical Fellow in Psychiatry for the period of August 1 through December 31.

To appoint:

Dr. William E. Achilles, Jr. as Clinical and Research Fellow in Surgery, assigned to Gynecology, for six months beginning August 15;

Dr. Maria R. Bereday as Research Fellow in Neuropathology, beginning approximately September 18;

Dr. James L. Buchanan as Clinical and Research Fellow in Surgery for one year, beginning July 1;

Dr. James B. Dealy, Jr. as Research Fellow in Medicine, as of July 1;

Dr. John Gillies as Clinical Fellow in Anesthesia for the months of November and December;

Dr. John Graham as Clinical Assistant in Surgery, assigned to Gynecology, beginning January 1, 1951. Dr. Graham will serve as assistant to Dr. Meigs in the Phillips House and Baker Memorial;

Dr. Henry M. Griffiths as Clinical Fellow in Surgery, assigned to Endoscopy, beginning September 1;

Dr. Manucher Javid as Clinical and Research Fellow in Surgery, assigned to Neurosurgery for a period of six months, beginning July 1;

Dr. Eugene Kennedy as Assistant in Biochemical Research, beginning September 1;

Dr. Harold P. Klein as Research Fellow in Biochemistry, beginning September 1;

Dr. Andre LaPointe as Clinical Fellow in Radiology for one year, beginning January 1, 1951;

Dr. Grant V. Rodkey as Clinical Assistant in Surgery, with the privilege of assisting Drs. Allen, Donaldson, and Welch in the Baker Memorial and Phillips House;

Dr. Remedios K. Rosales as Research Fellow in Neuropathology for the period of July 1 through December 31;

Dr. Vagn Zahle as Clinical Fellow in Psychiatry, beginning October 16.

The General Executive Committee also voted to reappoint Dr. Bernard J. Harries as Clinical and Research Fellow in Neurosurgery for the months of August and September.

STAFF PUBLICATIONS

A new procedure regarding the publication of titles of articles and books written by members of the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary staffs went into effect with the July—August issue of THE NEWS. Each month, titles of new publications will appear in THE NEWS. If you have not already done so, please send all titles of books and articles you have published since (and including) January 1, 1950, to Cora F. Holbrook, Editor of THE NEWS, and continue to send her all new titles each month.

As soon as the December titles have appeared in the January 1951 issue of THE NEWS, the lists will be assembled and published as the Massachusetts General Hospital—Massachusetts Eye and Ear Infirmary Publications for the calendar year 1950. Should you fail to report a title to THE NEWS, it will not appear in the assembled list.

Be sure to include complete data: 1) classification of material, such as Anesthesia, General Medicine, Laboratory Science, General Orthopedics, Orthopedic Surgery, Miscellaneous; 2) title of article; 3) title of publication in which it appears, together with the volume number and page numbers. For books, give the publisher's name and address.

Please pay special attention to 1), above. Several of the reports already received did not include classifications of material. In such instances where the titles failed to make the classifications obvious, much time had to be spent on examining the material or procuring this information from the authors.

The deadline date for each issue of THE NEWS is the 12th of the preceding month.

All requests for reprints are to go directly to the individual authors, and *not* to Treadwell Library nor to THE NEWS.

The following titles have been submitted, in addition to the 97 already published in THE NEWS:

Neurology, Neurosurgery, and Psychiatry

Cobb, S., Pool, J. L., Scarff, J., Schwab, R. S., Walker, A. E., and White, J. C.
Section of U fibers of motor cortex in cases of paralysis agitans (Parkinson's disease): Report of nine cases.
Arch. Neurol. & Psychiat. 64:57-59.

Ophthalmology

Cogan, D. G.
Symposium: Primary chorioretinal aberra-

tions with night blindness. Pathology.
Tr. Am. Acad. Ophth., July-Aug.:629-661.

Donahue, H. C.
Migrainoid headaches: Their ocular manifestations.
Arch. Ophth. 44:285-292.

Grant, W. M.
Tonographic method for measuring the facility and rate of aqueous flow in human eyes.
Arch. Ophth. 44:204-214.

Kinsey, V. E.
A unified concept of aqueous humor dynamics and the maintenance of intraocular pressure: An elaboration of the secretion-diffusion theory.
Arch. Ophth. 44:215-235.

Pediatrics

Talbot, N. B.
Endocrine homeostasis in clinical pediatrics.
Pediat. 6:1-8.

Physical Medicine

Hegnauer, A. H., Shriber, W. J., and Haterius, H. O.
Cardiovascular response of the dog to immersion hypothermia.
Am. J. Physiol. 161:455-465.

Sterility

Howard, R. P., Sniffen, R. C., Simmons, F. A., and Albright, F.
Testicular deficiency: A clinical and pathologic study.
J. Clin. Endocrinol. 10:121-186.

Simmons, F. A.
The treatment of female infertility.
Chicago M. Soc. Bull. 52:795-798.

Simmons, F. A.
The treatment of male infertility.
Fertil. & Steril. 1:193-198.

[We are very sorry that several titles, which were received on the deadline date and did not include classifications of material, could not be published in this month's list, due to lack of time in which to secure that information. *Please be sure to include the classification of each item when you send your titles.*]

⁂

RADIOLOGY DEPARTMENT

Dr. Laurence L. Robbins, Chief of Radiology, sent us the following information concerning the whereabouts of several past members of his department. We wish other department heads would send us similar reports for publication in The News.

Col. Alexander O. Haff (*gr. asst. R* 1946) is at the Tripler General Hospital in Hawaii.

Dr. R. Brian Holmes, who finished his resident training in Radiology on June 30, is now on the Radiological Staff of the Toronto General Hospital, Toronto, Ontario.

Col. John A. Isherwood (*gr. asst. R* 1947), recently returned from Tokyo, is now stationed at the Brooke General Hospital, San Antonio, Texas.

Col. Frank Y. Leaver (*clin. fel. R* 1948) is stationed at Fitzsimons General Hospital, Denver, Colorado. Recent news indicates he is still working hard.

Dr. Edward J. Sennett (*a. r. R* 1949 & *clin. fel. R* 1950) is assisting at the Rutland Hospital, Rutland, Vermont.

Dr. Harold Thomas (*gr. asst. R* 1945) has returned to this country from Ningpo, China.

Col. Harold A. Vinson (*clin. fel. R* 1949) is stationed at the Army Hospital, Fort Knox, Kentucky.

[We have learned that Dr. Robbins has been elected Secretary of the New England Roentgen Ray Society for the coming year.]

BIOGLETS

Dr. George Christman, Intern in Dentistry—born in Cambridge, Massachusetts, December 27, 1922; U. S. Navy: Lieutenant (j.g.), Puerto Rico, 1943-46; B.S., Harvard College, 1944; B.S., New York University, 1944; D.M.D., Harvard School of Dental Medicine, 1950.

Dr. Robert C. Coe, Intern in Surgery—born in Seattle, Washington, November 14, 1918; B.S., University of Washington, Seattle, 1940; U.S. Navy: Commissioned Ensign, May 1940, served 5 years of active duty at sea in DD-DE type vessels, and left the Service in January 1946 with the rank of Lieutenant Commander; M.D., Harvard Medical School, June 1950; married for 8 years; one son—Bruce.

Dr. Leonard W. Cronkhite, Jr., Intern in Medicine—born in Newton, Massachusetts, May 4, 1919; A.B., Bowdoin College, as of 1941 (1937-39); U.S. Army: Served in the U.S., the Pacific Theatre, and Central and South America, with the rank of Colonel, 1939-46; graduate of Command and General Staff College, U.S. Army, 1941; M.D., Harvard Medical School, 1950 (1946-50).

Dr. James J. Ferguson, Jr., Intern in Medicine—born in Glen Cove, New York, February 1, 1926; A.B., University of Rochester, Rochester, New York, 1947 (1943-45), in U.S. Navy V-12 Unit; M.D., University of Rochester School of Medicine and Dentistry, June 1950 (1945-50); Student Fellow in Bacteriology, University of Rochester School of Medicine and Dentistry, 1947-48.

Dr. Amasa B. Ford, Intern in Medicine—born in Cleveland, Ohio; Phillips Exeter Academy, 1940; B.A., Yale University, 1943; U.S. Army: Served as 2d Lieutenant of Infantry, 1943-46; M.D., Harvard Medical School, 1950.

Dr. Kurt J. Isselbacher, Intern in Medicine—born in Wirges, Germany, September 12, 1925; came to the U.S. in 1936; attended Harvard College, Class of 1948; research in the Department of Physiology, Harvard Medical School, 1948; M.D., Harvard Medical School, 1950; home address: 9 Willard Avenue, Portsmouth, New Hampshire.

Dr. Owen W. Kite, Intern in Dentistry—born in Trenton, New Jersey, June 10, 1919; A.B., Harvard College, 1942; U.S. Army: Served as a Private in New Guinea and the Philippines, 1943-46; D.M.D., Harvard School of Dental Medicine, 1950.

Dr. Leonard Laster, Intern in Medicine—born in New York City, August 24, 1928; spent about three years in Istanbul, Turkey, as a child of 5 to 8 years of age, and attended the English School for Boys while there; A.B., Harvard College, 1948; M.D., Harvard Medical School, 1950.

Dr. Merrill I. Lineback, Resident in Oto-Laryngology—born in Atlanta, Georgia, June 15, 1918; secondary and college education in Atlanta schools; A.B., Emory University, 1939; M.D., Harvard Medical School, 1943; Intern in Surgery, Boston City Hospital, 1944; U. S. Army: Oakland Regional Hospital, 1944-45; private practice in EENT in Atlanta, graduate work at Emory University, and Dr. Tucker's course at Philadelphia in Broncho-esophagology, from 1945 up to his arrival at the Massachusetts Eye and Ear Infirmary; married; two daughters.

Dr. Federico Mora, Intern in Medicine—home address: Guatemala, Central America; Universidad de San Carlos de Guatemala, 1943-44; Harvard College, 1945-46; Harvard Medical School, 1950.

Dr. Robert T. Sceery, Intern in Pediatrics—born in Hartford, Connecticut, 1920; B.A., Harvard University, 1942; U.S. Navy: Served as Executive Officer, LST 49, in Normandy, Southern France, and the Pacific, 1943-46; M.D., Yale University, 1950.

Dr. David B. Sheldon, Intern in Surgery—born in Medford, Oregon, June 7, 1921; U.S. Army: Served as Pilot, USAAF, North Africa, with the Middle East Wing, ATC, 1942-45; B.S., California Institute of Technology, 1946; M.D., Harvard Medical School, 1950; married, April 8, 1942; two children—Anne Elizabeth and Spencer Cushing, born in 1945 and 1947, respectively.

Dr. Edwin C. Wood, Intern in Medicine—born in Washington, D.C., 1925; George Washington University (accelerated course), June 1943—September 1944; George Washington University School of Medicine, 1944-50; Trudeau School of Tuberculosis, September—October 1947; Student Fellow in Pathology, George Washington Medical School, 1947-48; summer internship, Trudeau Sanitorium, 1948; married.

Having recently returned from Germany, following a fourteen-months' tour of duty with the Army of Occupation, it was felt that something concerning the situation today, as it appeared to one who lived there for a time, might possibly be of interest to readers of The News. The following more or less random remarks are an attempt to summarize a few impressions of various aspects of present-day life and problems in Germany and Western Europe.

Perhaps the initial and most striking feature to the new arrival in Germany is the first view of any one of the many large German cities reduced to rubble during the last war. One can hear about it or glance at photographs of ruins, but it is only by standing in the middle of one of these cities and looking out at mile after mile of city blocks, leveled to the ground, that a real appreciation of the magnitude of the destruction is gained. Such conditions exist in every last one of the major German cities, with the exception of Heidelberg which was deliberately spared; in many the damage involves sixty to eighty percent of the city—Berlin being perhaps the worst hit.

One is therefore even more amazed when it becomes apparent after a time that, in spite of the terrible desolation of her cities and industrial areas, Western Germany has made a tremendous recovery in the past five years. Industrial production is nearing former levels and in some instances has reached new peaks. Coal and steel shortages are things of the past, and food is plentiful; the only rationed item in Germany today is gasoline, and that only because the Allied Occupation insists upon it. With the establishment of the new Deutsche mark two years ago, West German trade and business once again were placed on a stable basis and have flourished ever since. German exports are again reaching significant levels. Housing remains a problem, both because of wartime destruction and as the result of the influx of millions of refugees from Eastern Europe; but building on a large scale is proceeding at the same time that the tremendous job of clearing away the ruins is carried on.

Defeated in a war for which they must, with their former leaders, bear full responsibility, and divided by their conquerers into East and West, the German people have, in spite of this, accomplished much in the past five years toward the bringing about of their own economic recovery and the re-establishment of Germany (at least, West Germany) as a nation among nations. Observations made on a brief tour through other countries of Western Europe seemed to bear out reports that recovery in Germany has at least kept pace with recovery in the rest of Europe—in fact, may even have been more rapid. This is fortunate, for there is no question but that Germany remains the key to Western Europe. It was interesting to hear the Dutch, the Swiss, the Italians, and even the French volunteer statements along this line. Although many Europeans are understandably bitter, I was surprised to hear others freely express their admiration for the German people and comment on the importance of Germany and German industry to the future of European recovery and security.

Certainly there is much to admire in the German people. They are extremely hard-working, with a certain pride in their work that results in even the smallest job being done well; they are honest, clean, and a very healthy, happy-appearing nation. Their standard of living, in spite of the war, is probably the highest in Europe, and may well be higher than the average in Great Britain. Certainly their scientific and technological level is far above that to be found elsewhere in Europe. They seem to bear no strong resentment toward us, in spite of the fact that we are there in the role of an occupation force; rather, they are in general quite friendly and helpful. It is interesting that in the five years of occupation no significant "incidents" suggestive of an underlying hatred or bitterness toward us have occurred. They are extremely grateful for the help the Marshall Plan has brought them. It is unfortunate that the majority of Americans do not appear to realize how important and successful has been the role of Marshall Plan dollars in promoting Western European recovery. And the Berlin Air-Lift—a tremendous operation, skillfully managed, I believe, from both a technical and a political point of view—likewise did a great deal to give us the upper hand in the cold war in Western Europe. It is easy to talk of dollars down the drain and the bungling of foreign policy, but despite the present precarious state of world affairs, I think it is fair to say that we have somehow managed to win the cold war in Europe so far.

Whether or not the German people have learned the lesson of World War II and the events leading up to it is hard to say.. Growing, perhaps, out of the historical manner in which Germany evolved as a nation, the people possess an intense nationalistic spirit, coupled with a fondness for things military—even including, in some, an almost childlike desire to wear uniforms. Put this with their scientific and technological skills, and it is easy to see along what roads they might travel. However, it is hard to live among them for very long and still attach much weight to the often expressed view that they are victims of a national psychological quirk which forever leads them in the paths of aggression.

There is probably something to the explanation which many of them give for the mistakes of the 1930's which led them into World War II. They chose National Socialism rather than the puny pseudo-democracy the victors of World War I had set up for them and then left them to founder by refusing assistance. Because National Socialism seemed at first to solve their problems in an acceptable manner, they allowed it to grow until it was beyond their power to control and nearly destroyed them. At any rate, both the Germans and the Western Allies seem to be doing everything in their power to avoid creating a similar situation this time, and this is a hopeful sign.

German medicine, likewise, seems to have come a long way in its "recovery". The throwing off of the heavy yoke of dictatorship, the readjustment of twisted principles and ethics, and the disassociation of the aspects of brutality which the German people had come to associate with segments of the profession have been as important as the re-establishment of contact with the rest of the medical world. They are gradually catching up with the progress made during the years when the profession was a virtual prisoner of state in Fortress Europa. The newer drugs are now available, surgical techniques have been brought up to date, the medical schools are well attended, and the professors speak freely once again and carry on their clinics and research. They still have a semi-socialized form of medical practice, but at least they are busy healing the sick once more—not exterminating.

Thomas H. Green, Jr., M.D.,
Assistant Resident in Surgery

* * *

Brief bits:—

An incorrect identification for Dr. Hugh A. MacMillan, Jr. was given in the heading to his interesting letter published last month. The Colorado Hugh A. was Assistant Resident in Surgery, ending service in 1947. It is another MGH Hugh A. who is a Pathologist. All of Colorado Hugh's friends must have known that the gremlins got into the machinery when they read his letter.

Dr. Fiorindo A. Simeone, who recently resigned his position as Assistant Surgeon on our staff, has become Director of Surgery at the Cleveland City Hospital and Professor of Surgery at Western Reserve University, Cleveland, Ohio.

Dr. Fred A. Simmons (*WS* 1935), Assistant Surgeon on our staff, was elected Vice-President of the American Society for the Study of Sterility, at the June meeting in San Francisco. Dr. Simmons is on the Editorial Advisory Board of the *Journal of Fertility and Sterility.*

Dr. Arthur L. Watkins (*a.r.p. N* 1938), Chief of Physical Medicine and Assistant in Medicine at M.G.H., assumed his duties as President of the American Congress of Physical Medicine on August 29, at the annual session of the organization, held in Boston this year.

MASSACHUSETTS EYE & EAR INFIRMARY

On October 19, the Infirmary will hold an all-day Open House, to give various groups in the community a chance to see our new facilities which have been made possible by the Building Program. The affair will include demonstrations of all services and departments of the hospital, so that our friends and supporters may see for themselves the improved service we can now give to the community. The program is divided into three parts:

Medical Open House—to demonstrate our new medical facilities to doctors, under a Committee of Surgeons. 10 to 12 A.M.

General Open House—for individuals and community organizations interested in our work, under a Committee of Hospital personnel. 2 to 4 P.M.

Reception and tea for donors—for all who contributed to the Building Fund, with the Board of Managers, members of the Corporation, and the Ladies' Visiting Committee as hosts. 4 to 6 P.M.

Dr. Luis Navas, Resident in Oto-Laryngology, completed his course on October 1. He will go to the Lempert Institute in New York City for six months of study.

Dr. Charles L. Schepens of the Retina Service has returned from Europe, where he read a paper at the Ophthalmological Congress in London and also in Paris.

Dr. Thomas P. Cronin, recent graduate of the Infirmary, has been appointed Senior Clinical Assistant.

Dr. Kelvin O. Fleming, from Vancouver, Canada, was appointed Fellow in Eye Pathology for one year, beginning July 1.

Dr. John S. Lilly began his residency in Oto-Laryngology on September 1. He took his medical training at Ohio State University, and was with the 49th General Hospital in Tokyo, Japan.

New addresses:—

Dr. Donald V. Baker, Jr. (*ES* 1943), 17 Lee Road, Chestnut Hill 67, Mass.

Dr. Sheridan S. Evans (*ES* 1945), Veterans Administration Hospital, Houston, Tex.

Dr. David G. Freiman (*past a. path.*), Bethesda Hospital, Cincinnati 6, Ohio.

Dr. Thomas A. Warthin (*a. M*), 810 Neponset St., Norwood, Mass.

A while back, we published letters from two of our oldest living alumni — Dr. Arthur K. Stone (*WS* 1888) and Dr. Edward M. Greene (*EM* 1889) — in which they gave us interesting and amusing reminiscences of their days here as interns. Now, thanks to Dr. John P. Monks, Assistant Physician on our Visiting Staff, and to his active interest in our Archives Department, we have another treat for our readers.

A few weeks ago we received the following letter from Dr. Monks:

> Having been an avid reader of the MGH News since its inception, it occurred to me that an account of the experiences of my father, Dr. George H. Monks, while a surgical house officer at the M.G.H. in 1879, might be of interest. It was written by him as part of his informal memoirs, which his children urged him to write and which he completed a year before his death in 1933. In his memoirs are various other items of medical interest, but none specifically MGH.

And here are the items selected by Dr. Monks from his father's memoirs. We are indeed fortunate to be able to publish this first-hand account from a member of the

Class of 1880

I graduated from the [Harvard] Medical School in 1879; and, after examination, was appointed a surgical house officer on the East Side at the M.G.H. and began my services there on June 1.

In those days the entire number of house officers was six, four surgical and two medical. Of the four surgical house officers, two were on the East Service and two on the West. With the other five house officers I was of course on terms of great intimacy. My associate on the East Surgical Service was George G. Hayward; while the house officers on the West Surgical Service were Walter J. Otis and Dudley P. Allen. None of these are now living. Hayward was the son, or grandson, of one of the old-time physicians connected with the hospital. Otis was ingenious, and an excellent house officer. Allen came from the West — Cleveland was his home — and he was finally elected President of the American Surgical Society, thus receiving the official recognition he deserved. He married a very charming lady, and practised in Cleveland for many years. My visits to them are among my pleasantest remembrances. [William N.] Bullard, one of the two medical officers, had been my classmate at college, and he later became a prominent specialist in nervous diseases. He married Miss Mary R. Reynolds, and lived for many years in Boston in winter, and at Lenox in summer. He died rather suddenly in Boston in 1931. [Henry P.] Jaques, the other medical house officer, was a particularly attractive person. He engaged in general practice, especially in Lenox, but retired early from active work. He has been twice married.

The visiting surgeons on the East Surgical Service were Dr. Henry H. A. Beach, Dr. Henry J. Bigelow, and Dr. Richard M. Hodges. I began my surgical internship under Dr. Beach. He was a protege of Dr. Bigelow, and, although not a great surgeon, he was a good one, and I learned much from him. One little incident comes to my mind as I think of Dr. Beach. It had always been the habit in the hospital to return all the medicine bottles, whether empty or not, to the pharmacy after the medicine in them was no longer required; and then the contents of each bottle, if any remained, was emptied into a hogshead in the basement under the pharmacy. As everything was thrown, or poured, into the hogshead — pills, powders, tinctures, extracts, liniments, etc., etc. — that receptacle became fuller and fuller. The contents was then given the name of "Expectant Liniment". This liniment was at first not used for any purpose whatever; but occasionally Dr. Beach, when a patient in his wards complained that he needed a new application to relieve his pain, would say, "Give him some Expectant Liniment!" It's interesting to realize that such patients frequently afterwards remarked, "That liniment, doctor, you gave me last time was *great stuff*. It helped me considerable," or words to that effect.

In October I began service with Dr. Henry J. Bigelow. He was the one surgeon who stood alone, and who not only dominated the entire medical staff of the hospital, but at this time was senior member of the whole surgical group. It is quite impossible to convey to men of the present generation any adequate idea as to the personality of this remarkable man and his influence on all who had to do with him. In the first place, he was a grand specimen of a man, being tall and well-built, with strongly modeled features, a long moustache and massive projecting beard, all of which combined to give him an almost Jove-like appearance. His whole bearing and manner seemed to fit these physical characteristics. Mentally he was extraordinarily quick, intelligent, and practical; and his lectures, whether didactic or clinical, were models of subtle descriptions and careful explanations concerning the subject in hand, in the course of which the essentials were emphasized in such a manner that they remained firmly impressed on the memory. How well do I call to mind how he used in his lectures to sum up these essentials in definite and concise language. A good illustration of this was when he emphasized the three essentials in the treatment of fractures and other injuries in the upper part of the humerus, as follows: "Pad in the axilla, elbow at the side, arm in a sling!" As an operator he was brilliant, skillful and rapid, illustrating, it always seemed to me, the behavior of surgeons in the pre-anesthetic days of surgery. The contributions which Dr. Bigelow made to surgery were many, but the most outstanding among them concerned *dislocation of the hip and stone in the bladder*. His methods of treatment in both of these conditions were generally accepted by surgeons in a large part of the country, and for a long period they were commonly practised.

My own experience with Dr. Bigelow was, for a short period, a rather close one, since for four months or so I was his surgical assistant at the hospital; and it was to this association that I owed much in the practice of surgery, not only then but throughout my professional career. Naturally I remember a few incidents which occurred during my service with Dr. Bigelow, some of which illustrated well his sense of humor and his rapid retort or response. There was one occasion on which he wished to show, at a meeting of the Massachusetts Medical Society, the new instrument for his operation ("litholapaxy", as it was called) for stone in the bladder. I was his assistant at the time, and I was thoroughly familiar with all his instruments and his operative technique. "Mr. Monks," he used to say, "whenever a stone comes into the hospital, tie a string to it!"

On one occasion he had arranged to show some of his instruments and explain his methods of operating, at a meeting of the Massachusetts Medical Society. Some days before his demonstration, he asked me whether I would be willing to go there with him and help him in arranging his instruments. Of course, I readily assented, and he then told me exactly what he wished me to do when I came to the hall where he was to give the talk. Thereafter, from time to time, he referred to my helping him, and on the day of the demonstration he sent his carriage for me, so that I might surely be on time at the place where the meeting was to be held. When I arrived at the hall, I followed his instructions with the greatest care, and everything, I believe, was arranged just as he had wished. I remained at his elbow, so to speak, throughout his whole demonstration which, incidentally, was most enthusiastically received.

I felt sure that he was pleased with the way I had done my work, for Dr. Beach, one of his close associates, later told me so. In the afternoon of the same day Dr. Bigelow came again to the hospital to see one of his patients whom he had operated upon a short time previously. I thought he would at least thank me for my help to him, for it was not hospital work that I had done; but he said nothing. Foolishly, I suppose, hoping to receive a little commendation from the great man, I ventured to say, "I hope everything went all right this morning, Dr. Bigelow." His reply to this was, "Yes, it was all right. Let me see, you were there, weren't you?"

Dr. Bigelow allowed considerable latitude to his assistants at the hospital and was evidently quite willing that they should give their own medical prescriptions to his patients, although he kept a close watch on what was being done. On one occasion, toward the end of his service, he asked me if a certain patient was getting anything in the way of a tonic, and I told him that he was taking such and such a medicine, and that I had ordered it. Looking at me, he said, "Mr. Monks, I don't much mind *my* assistants giving medical treatment to *my* patients, but I want to tell you *one thing!* Next week Dr. Hodges will come on duty in my place, and, if you keep up the practice of prescribing medicine for *his* patients, you'll get hell! That's all I have to say."

I could, I feel sure, call from my memory many incidents and stories in which Dr. Bigelow prominently figured, but perhaps I have already said enough about him, for there are others concerning whom I would gladly say a few words. . .

The "Dr. Hodges", so picturesquely referred to by Dr. Bigelow, was Dr. Richard M. Hodges, another of the surgeons on the East Surgical Service. He was a forceful person, careful and conscientious. He had formerly been Demonstrator of Anatomy at the Harvard Medical School and had written a treatise on the subject of anatomical dissections. I learned very much from his instructions and from his methods of work.

In 1858, Dr. Benjamin Shurtleff Shaw, a graduate of Harvard College and the Harvard Medical School, became our seventh Superintendent and the first to carry the new title of Resident Physician. He was invited to attend the Medical Board meetings, and was made librarian of Treadwell Library.

Among other papers in our Shaw file is a letter from him to the Board of Trustees, dated October 9, 1862, which reads:

> I am urgently requested by the U. S. Sanitary Commission to visit the General Hospitals of the Army, as one of a Board of Special Inspection. They ask me to give them two terms of service of a fortnight each, during the next six months, and if upon further consideration, it seems my duty to go, I would respectfully ask the Board of Trustees for permission to be absent such length of time for this object.

This reference to the inspection of hospitals during our Civil War, brings to mind accounts of similar missions, all over the world, during and since the recent war, in which many members of our Staff have participated.

Dr. Shaw held office as Resident Physician until 1872. We have a letter from him, addressed to Thomas B. Hall, Secretary of the Trustees, and dated April 20, 1872, which reads:

No. 27 in a series of Staff photographs
Dr. David Weisberger—Oral Surgeon and Chief of Dental Service

> . . . I was inducted into the office [of Resident Physician] May 24th, 1858.
>
> Since then what changes! I claim with great satisfaction the organization & the credit of the success of the Out Patient & Dental Departments which treat ten thousand persons annually. The origination & general arrangement of the new Operating Theatre, and the same of the new Heating Apparatus. When I came here, less than 1000 patients were received annually, & very many of these were chronic cases deriving no other benefit than that of a home. Since then we have taken from 1000 to 1600 annually & all them people restored to health or otherwise actively treated. I feel that the old Institution, under my charge, has not degenerated & I hope that it will always prosper.

Dr. Washburn has this to say about Dr. Shaw's administration:

> In contemporary documents frequent criticism may be found of the fact that the Hospital under previous administrations had become, to a certain extent, a home for chronic invalids to the detriment of its true function as a general acute hospital and to the exclusion of acute cases of disease urgently needing its care. Dr. Shaw performed the very great service of returning the Hospital to the performance of the work for which it was built. Again, the organization of the Out-Patient and Dental Departments was a fine piece of work. Out patients had been treated from the beginning of the Hospital, but in a casual manner with no special officers assigned to their care. Dr. Shaw refers to the building erected in 1867, which contained the Bigelow Operating Theatre and the new Out-Patient Department rooms. Service in this building was, according to the Annual Report for 1868, "inaugurated by the Annual Meeting of the Massachusetts Medical Society, which held its two days' session in the Theatre and anterooms." These improvements in the physical plant Dr. Shaw mentions; he says nothing of the great improvement in the smooth running of the Hospital — the restoration of the House Pupils to favor, and to board and lodgings at the Hospital. These were major accomplishments also.

Upon his retirement, Dr. Shaw was elected a Visiting Physician, which office he held until 1884, when he resigned so that he might have sufficient time for his private practice. He died in 1893.

Dr. Norton Folsom was our eighth Superintendent—or Resident Physician, as the title had become in Dr. Shaw's administration.

Dr. Folsom was a House Pupil at Massachusetts General Hospital in 1863 and received his M.D. from Harvard in 1864. Our folder of Folsom material contains a letter written by him to the Trustees on February 10, 1864, which reads:

> The undersigned respectfully asks permission to obtain his medical degree at the coming Commencement in March, in order to apply for a position in a United States colored regiment; competition for which would be at great disadvantage or impossible, after the summer examination.
>
> Norton Folsom
> House Pupil

The second page of the folded sheet carries this note, in Dr. Shaw's hand:

> The application of Dr. Folsom meets my approval and the concurrence of the Physicians of the hospital.

At the end of his military service in the War Between the States, Dr. Folsom was appointed Assistant Physician at the Taunton Lunatic Asylum where he served for three years, followed by a similar service at the Bloomingdale Asylum for the Insane in New York City, a branch of the New York Hospital.

We will continue his story from this point in a future issue.

* * *

This letter, with news of interest to everybody, has come from Dr. W. Philip Giddings (*WS* 1939), who recently resigned as Assistant in Surgery on our staff.

> I am sorry to reverse the field, after having so recently given you information as to my future plans. However, my liaison with the Veterans Administration has been severed; I am *not* going to the VA Hospital in Albany, as I expected to do until very recently. Instead, I have come to Bennington, and am now engaged in the private practice of surgery in that town. Although I have been here less than two weeks, things have had an auspicious beginning and I have been busy. This, in spite of the fact that I have not even acquired an office.

* * *

Maybe Mr. George E. Hamilton, our genial Marshal of the Doctors' Parking Lot, is imagining himself back in his old baseball dugout as he sits in the doorway of his little house out in the parking area.

Lest anyone think we are reaching too far into the outfield with that conjecture, let him read the *Boston Globe* of August 9, if he has not already done so. There, on the front page, he will find a long illustrated article about Mr. Hamilton's recent exploration into the very centre of a 1912 and a 1950 baseball, to find what (if any) differences in construction there may be. Also, the coming issue of the *M.G.H. World* gives the whole story of the exploration project, together with an excellent photograph of Mr. Hamilton.

Once a baseball man, always a baseball man.

The News

No. 95 Boston, Mass. November 1950

THE CARDIAC CLINICS AND LABORATORY

1. Their origin and evolution

Special interest and activity in the field of cardiovascular disease at the Massachusetts General Hospital dates largely from the pioneer work and teaching of Dr. Richard C. Cabot. In 1914 there appeared two notable contributions by Dr. Cabot which influenced profoundly contemporary thought and subsequent developments in this field. The first was a paper in the *Journal of the American Medical Association* entitled "The four common types of heart disease", in which the establishment of the cause of heart disease was emphasized as of far greater importance than the then-current emphasis on structural defects. The fundamental significance of this concept has been fully substantiated and extended in the intervening years. The second contribution, which appeared in the same year, was the now well-known *Facts on the heart* — a compilation in book form of clinical and pathological correlations on a large group of patients studied at the M.G.H. The impact of these two contributions is reflected in the extensive studies in this hospital and elsewhere along the lines early plotted by Dr. Cabot.

Furthermore, it was he who instituted hospital social service in this country. This service with its many ramifications has spread throughout the world. Its need in patients with heart disease at the M.G.H. was early emphasized by Dr. Fritz B. Talbot, especially in the childhood group, and as a result of his efforts a social worker was appointed in 1912 to supply the connecting link between the clinic and the home. Shortly thereafter a group of interested ladies organized the "Committee for the Home Care of Children with Heart Disease", and this committee continues to play a vital part in supplying service, both social and medical, to cardiac patients. The work and methods of Miss Edith M. Terry as head of this activity and of Miss Lorena Love in the field of Occupational Therapy have received national recognition.

Another event at the M.G.H.—also in 1914 — of great significance, as subsequent years have revealed, was the return from London of Dr. Paul D. White. He brought back a new machine from Cambridge, an electrocardiograph, one of the first in America. As a Moseley Fellow, Dr. White had completed a year of study in the laboratory of Sir Thomas Lewis at University College Hospital. He returned completely weaned from his earlier attachments to Pediatrics. Contrary to the advice of one of the senior and learned members of the staff, who suggested to him that the study of heart disease as a specialty was a far too restricted (and even narrowing) field of endeavor to warrant a young man's interest, he organized the Cardiac Laboratory and began his far-reaching studies in Cardiology.

The first "laboratory" occupied a modest space under old Ward G. From this early beginning the Cardiac Laboratory (Dr. White, the Cambridge instrument, and a procession of devoted workers) matured and migrated by devious ways through the basement of the Bulfinch until finally, in 1939, it came to rest above ground at its present site. From this central location appendages have extended to the ninth floor of the White Building, to the new laboratory recently constructed on the X-ray floor, and to other parts of the hospital.

In a somewhat less tangible fashion, but nonetheless to a considerable degree, a third outstanding personality has influenced the development and direction of cardiovascular studies at the Massachusetts General Hospital. The early participation of Dr. White in the pioneer studies of Sir Thomas Lewis in London in the new field of electrocardiography was followed by such a succession of research fellows from the M.G.H. to University College Hospital that in the 1920's this association acquired the status of a tradition on both sides of the Atlantic. This mingling of disciplines created in America a second generation of investigators and teachers that reflects great credit to the inspiration and enthusiasm of their preceptors and to the M.G.H.

As a corollary of this increasing interest in diseases of the heart, the special clinics in the O.P.D. came into being. Dr. Joseph H. Pratt organized the Adult Cardiac Clinic just before World War I, and Dr. Richard S. Eustis the Children's Cardiac Clinic. In the ensuing years these have continued to play a vital role in the study and teaching of heart disease. In 1927 Dr. T. Duckett Jones organized an additional clinic for the special problems of the adolescent group and for the long-term study of rheumatic heart disease as an integral part of the research program at the House of the Good Samaritan. The mounting importance of high blood pressure and its related problems led to the Hypertension Clinic under Dr. Robert S. Palmer in 1934.

In 1949 a new research laboratory, primarily for cardiac catherization but also for related studies by other departments of the hospital requiring special X-ray and physiological equipment, was constructed as an extension of the second floor of the White Building adjacent to the X-ray Department. This laboratory was made possible by the interest and generosity of Mrs. Theodore E. Brown and was dedicated in June 1949 to Dr. Paul D. White. The usefulness of this new addition to the hospital has been further enhanced by a grant for special X-ray and recording equipment from the National Heart Institute.

In the broad field of cardiovascular disease, perhaps the most promising development of the past decade has been the awakening of interest and support by private and public agencies and foundations for research. The dramatic advances in recent years in the control and cure of infections, in the improvement and extension of surgical techniques, and more recently in the introduction of new and exciting agents for the relief and study of hitherto baffling diseases have pointed up sharply the still unsolved problems of rheumatic fever, of hypertension, and of aging arteries—the triad responsible for 90 percent of heart disease.

In recognition of the magnitude of the problems presented by the death of one in three of our population from diseases of the heart and blood vessels, the Federal Government, by an Act of Congress, created in 1948 the National Heart Institute within the framework of the U. S. Public Health Service. Its broad objectives include support for research, aid for hospitals and medical schools, and a furtherance of teaching and training programs. This new and humanitarian undertaking by the Federal Government represents a milestone in the fight against the nation's number 1 killer.

From this newly created National Heart Institute, research at the M.G.H. received a great impetus in 1949 in the form of a construction grant of nearly a half million dollars to assist with the new research building. The hospital's gain in this connection was tempered, however, by the loss of Dr. White's direction of the Cardiac Clinics and Laboratory, which he felt obliged to relinquish in the face of his important new duties and responsibilities as Executive Director of the National Advisory Heart Council, and Chief Consultant to the National Heart Institute.

The acceptance of such generous aid from the N.H.I. carries corresponding new obligations to extend and promote cardiac research in the basic fields. In recognition of this privilege and responsibility, the hospital has created a special research unit under Dr. Ivan D. Frantz, Jr. This new unit, as well as the other research activities of the cardiovascular group now housed in scattered sections of the hospital, will soon occupy the first floor of the new (as yet unnamed) research building.

II. Research activities

Clinical research at present includes an active program in the major fields of cardiovascular disease, with emphasis on rheumatic fever, on high blood pressure, and on coronary disease. The testing of new drugs and other agents, the application of improved methods of study, and the development of promising techniques continue to occupy a prominent role in the activity and interest of the staff.

A long-desired and welcome addition to the research facilities of the hospital will be the new unit under Dr. Frantz. In this laboratory a biochemical approach to the problem of arteriosclerosis will be pursued by a study of the rate of turnover of elastic tissue in animals (perhaps in humans) of different ages, and by a study of the lipoproteins of plasma, employing isotopically labeled compounds, to determine the availability of the lipids for deposit in blood vessel walls. This fundamental approach is a natural outgrowth of the intensive biochemical, hormonal, and anthropological studies of coronary disease by Drs. Menard M. Gertler and Stanley M. Garn now nearing completion under a three-year grant from the Commonwealth Fund.

Another new activity to occupy a laboratory on the cardiovascular floor will be the application of the techniques of radar and television to the study of the electrical potential around the heart. By means of a special machine (an area display oscilloscope) recently designed by Professor Stanley Goldman at M.I.T., it is now possible to visualize the spread of potential over the precordial area with each heartbeat and to record these patterns on motion picture film. Under Dr. Conger Williams's direction and in collaboration with Professor Goldman, this new approach will be explored in normal and in diseased hearts.

The phonocardiographic laboratory now in temporary quarters in the White Building will move to a sound-protected room on the cardiovascular floor. Further investigations of heart sounds and murmurs will be carried out under Dr. Howard B. Sprague by means of a new frequency analyzer. Preliminary phonograph records of cardiac auscultatory phenomena have been made through the cooperation of the Sanborn Company and the R.C.A. Victor Company. The latter was able to lend us its sound recording equipment and engineers at a time when they were recently in Boston recording the Boston Symphony Orchestra. It is hoped that useful teaching records may be developed.

Still another activity to transfer from its present temporary quarters in the White Building to a well-equipped laboratory in the new building will be the N.C.A. (neurocirculatory asthenia) project under Dr. Mandel E. Cohen, Dr. Edwin O. Wheeler, and associates. This study of physiological, biochemical, and genetic aspects of physical fitness and cardiovascular disease was initiated during the war and has continued actively with U. S. Army support.

Cardiac catheterization is being conducted by a special team composed of Dr. Gordon S. Myers from the cardiac group, Dr. J. Gordon Scannell from the Surgical Service, and Dr. Stanley M. Wyman from the Department of Radiology. This activity is now well housed and will remain in the new laboratory made possible by Mrs. Theodore E. Brown and equipped by a grant from the N.H.I. A recent addition includes a specially constructed machine for angiocardiograms which permits exposure of 23 X-ray films in rapid succession, sufficiently fast to follow the circulation through the heart and lungs. In addition to the application of these special methods to clinical problems, a research program is now in its second year concerning the response of the pulmonary circulation (especially hypertension) to surgical procedures, anesthesia, and pharmacologic agents.

In the field of blood pressure, Dr. Palmer has received a grant to support his studies on the natural course of hypertension. It is hoped that actuarial life tables may be constructed for patients with varying degrees of this condition which will be helpful in appraising the effectiveness of various therapeutic measures. Dr. Dorothea G. Loofbourow is actively testing the effects of a new diet as low in sodium as the rice diet but with a high protein and markedly reduced fat content. Dr. William P. Chapman is in charge of the special tests useful in the detection of patients with adrenal tumors and is pursuing a study of the relationship of the adrenal cortex and the steroids to the pathogenesis of hypertensive vascular disease.

The rheumatic fever group, traditionally entrenched at the House of the Good Samaritan, continues its studies in conjunction with the research department there. Dr. George P. Sturgis is in charge of a program designed to test the effectiveness of prompt penicillin treatment of acute streptococcal infections in rheumatic fever subjects in their homes. The results suggest that this may prove a useful measure for the prevention of rheumatic fever. Members of the cardiac group are actively collaborating with Drs. Benedict F. Massell and Joseph E. Warren in studying the effects of ACTH and cortisone in the acute and, more recently, in the chronic stages of rheumatic fever, and the possible mechanisms involved. Dr. Ernest Craige is following the effects of these agents upon the electrocardiogram, both in rheumatic fever and in other disease states in which they appear useful. A long-term study of the natural course of rheumatic fever and rheumatic heart disease organized at the House of the Good Samaritan in 1927 by Dr. T. Duckett Jones has been carried forward without interruption both there and in the Adolescent Cardiac Clinic at the M.G.H. By 1951 a full twenty years of observation will have been completed on each of 1,000 patients, with a loss of only 5 from the study. An interim report on the twenty-year status of this group was presented recently at the International Congress in Paris (Bland and Jones). As an outgrowth of these long-term observations, a new procedure for the relief of recurring acute pulmonary edema secondary to marked mitral stenosis was undertaken in 1948 as a palliative measure (Bland and Sweet). To date this operation (a pulmonary vein-azygos shunt) has been undertaken in 13 carefully selected patients. The results in the majority have been encouraging, and in a few the relief has been remarkable.

The problems of electrolyte balance in patients with heart failure and the use of cation-absorbing resins added to the diet are being studied on the medical research ward by Dr. James H. Currens, and also the usefulness of special drugs (especially protoveratrine) for lowering acute and extreme elevations of blood pressure.

It is with satisfaction and appreciation that one reviews the above program of investigation, carried forward in large part by the practising physicians of the hospital staff who, in spite of mounting outside responsibilities, continue to give so generously of their time and talents to further clinical research at the M.G.H. Contributions to our research fund by interested patients and friends have provided substantial aid not otherwise available. The present "cardiac group" includes seventeen members of the staff. It is represented this year at the national level by Dr. Howard B. Sprague as President of the American Heart Association, and on the international scene by Dr. Paul D. White as First Vice-President of the newly formed International Society of Cardiology.

III. Teaching and training program

A. Courses. It has long been the prevailing opinion of our group that the teaching of Cardiology as a specialty properly belongs in the realm of graduate medical education, and hence the major teaching activities continue in this direction. For almost thirty years physicians have attended organized courses in heart disease at the M.G.H. A new development has been the inauguration of a long-term course of twelve months limited to twelve men. It is conducted under the auspices of the Harvard Medical School, Courses for Graduates, and is now in its fifth year of operation. In addition to our facilities, the clinical material at the House of the Good Samaritan, at the West Roxbury Veterans Hospital, and at the Cambridge City Hospital is made available for this course.

A short-term course of one week is usually given in the fall for the American College of Physicians. Last year it was attended by ninety-five doctors. A week's course in the spring in electrocardiography is also given for the American College of Physicians for thirty physicians.

At the undergraduate level, a fourth year Harvard Medical School student is assigned each month to the Cardiac Laboratory for four weeks as part of his elective work. During this period he becomes an active member of the laboratory staff, and this assignment has proved a popular one, as evidenced by the fact that the number of applicants cannot be accommodated. In addition, special clinics are given in the Department of Medicine as part of the regular third year curriculum at the M.G.H.

B. Cardiac fellows. In the past it has been customary to have one, and more recently, two cardiac fellows who serve for twelve months in the Cardiac Laboratory and Clinics and assist in clinical research. Requests for this specialized type of training increased to such an extent that in 1949 a new plan was developed, in cooperation with the House of the Good Samaritan, whereby this service was augmented by a third cardiac fellow and was extended to eighteen months. Under this new arrangement each of the three fellows serves for twelve months on the cardiac service at the M.G.H. and six months as resident physician in charge of the rheumatic fever patients at the House of the Good Samaritan. At present the National Heart Institute is supporting two of these fellows, and the third is supported from other sources, including the Cardiac Research Fund.

C. Research fellows. The laboratory continues to be favored with the presence of foreign physicians holding research fellowships, who spend from six to twelve months as active participants in the clinical and investigative activities of the laboratory. During the past year there have been physicians in this capacity from Ireland, England, France, and Egypt. They bring to us the background and techniques of the old world and return, we hope, as missionaries of the new.

IV. Concluding remarks

In closing this brief survey, it is perhaps permissible to glance backward and recall the generous share of "firsts" and "near firsts" that have occurred within the broad field of cardiovascular disease within these walls.

(1) It was here that Dr. Richard Cabot first pointed out the fundamental importance of establishing the etiology of heart disease (1914).

(2) One of the earliest electrocardiographic machines introduced into this country was set up here by Dr. Paul White (1914).

(3) The first successful pericardial resection in America for constrictive pericarditis was performed by Dr. Edward D. Churchill in collaboration with Dr. White (1928).

(4) The application of surgery of the sympathetic nervous system for the relief of cardiac pain and of intractable tachycardia by Dr. James C. White (1920-30's), and its extension and modification for the control of hypertension by Dr. Reginald H. Smithwick (1930-) have been notable.

(5) The electrocardiogram of acute dilatation of the right side of the heart, following pulmonary embolism, was described in 1935 (McGinn and P. D. White).

(6) From this hospital in 1933 emanated a report concerning congenital vascular loops throttling the trachea and esophagus in children. Their amenability to surgical intervention was suggested at that time (Albright, Ernlund, and Sprague). Twelve years later (1945) this was successfully accomplished for the first time by Dr. Richard H. Sweet in collaboration with Drs. Gertrud C. Reyersbach and Charles W. Findlay, Jr., independently of and without the knowledge that Dr. Robert E. Gross had three weeks previously performed a similar and successful operation at the Children's Hospital.

(7) A venous shunt for the relief of severe pulmonary hypertension from advanced mitral stenosis was first conceived and successfully undertaken in 1948 (Bland and Sweet).

(8) Electronic mapping of the electrical activity of the heart has been applied here for the first time by Drs. Conger Williams and Fred Alexander in collaboration with Professor Stanley Goldman of the Massachusetts Institute of Technology (1948).

More important but less spectacular has been the continued study and application at the clinical level of the fruits of laboratory research, here and elsewhere, for the care and comfort of the patient—so well embodied in the cardiac classic *Heart disease* by Dr. Paul D. White, now approaching a fourth edition.

Such, then, are the men and the events which have shaped the course of Cardiology at the M.G.H., and in concluding this summary for THE NEWS it is with deep appreciation that I record the continuing association, assistance, and advice of Dr. Paul D. White in the activities of the Cardiac Clinics and Laboratory which he developed and inspired for more than a quarter of a century.

Edward F. Bland, M.D.,
Physician

* * *

Dr. Faxon was presented with the gold medal Award of Merit at the 52nd Annual Convention of the American Hospital Association, held in Atlantic City in September. The occasion was of special significance in that only 12 of these awards have been presented in the entire history of the Association.

The medal is very lovely in texture and design. One side bears the symbol of the award. On the reverse are the seal of the Association and the following tribute:

AMERICAN HOSPITAL
ASSOCIATION

presents to

NATHANIEL WALES FAXON, M.D.

an

AWARD OF MERIT

Nathaniel Wales Faxon, M.D., inspired Administrator and astute Leader whose endeavors and counsel have led hospitals in his charge to great public service and who, through the American Hospital Association and other health organizations, has aided all hospitals in providing better care.

By action of
The Board of Trustees
September 21, 1950

John N. Hatfield
President
George Bugbee
Executive Director

The Board of Trustees, at their meeting on September 22, voted:

That Dr. John Gillies be given the title of Visiting Anesthetist pro tem when he comes to the Hospital in November and December;

That Dr. Harley C. Shands be given leave of absence from his position of Assistant in Psychiatry for the remainder of the hospital year, with the understanding that he will be recommended for reappointment for the ensuing year with leave of absence in that year to complete his study at the Boston State Hospital.

To appoint:

Dr. Elizabeth A. Koppell as Assistant Resident in Anesthesia for one year, beginning January 1, 1952;

Dr. Martin B. Levene as Second Assistant Resident in Radiology, beginning July 1, 1951;

Dr. Kenneth F. Sands as Assistant to the Children's Medical Service;

Dr. Fiorindo A. Simeone to the Board of Consultation;

Professor F. A. R. Stammers as Visiting Surgeon pro tem for approximately four weeks.

At their meetings on September 13, 20 and 27, and on October 4, the General Executive Committee voted:

To reappoint Dr. John W. Irwin as Clinical and Research Fellow in Medicine, assigned to Allergy, as of October 1.

To appoint:

Dr. Osvaldo Cori as Research Fellow in Biochemical Research, effective as of September 1;

Dr. Julian J. Goodman as Clinical Fellow in Dermatology;

Dr. David Kahn as Research Fellow in Pathology for six months, beginning January 1, 1951;

Dr. George D. Ludwig as Research Fellow in Surgery for the period from July 1 to October 1;

Dr. John F. McGinty as Clinical Fellow in Medicine, beginning January 1, 1951;

Dr. Leonard B. Spector as Research Fellow in Medicine, as of September 18;

Dr. Edgar B. Taft as Research Fellow in Medicine, effective as of September 1;

Dr. Melvin L. Taymor as Clinical and Research Fellow in Surgery, assigned to Gynecology, effective as of September 1;

Dr. Harold Thomas as Clinical Fellow in Radiology, effective October 1;

Dr. Joel W. Wyman as Clinical Fellow in Dermatology.

So much happened on Ether Day this year, it is impossible to give you in few words a satisfactory account of the celebration. However, here are some of the high points in the day's program.

The established custom of presenting pins to those of the non-professional personnel who have completed varying periods of service at M.G.H., from ten years to fifty, was continued. A sizeable audience assembled in the Moseley Rotunda at 2 o'clock, joined by Dr. Clark who, after a few words of greeting, spoke of the importance of each individual's job, the hospital's place in the community, plans for future expansion, and the inclusion of the hospital in the new Social Security coverage. He then presented the 36 new pins, to be added to the hundreds already presented over the previous years.

A new feature of the day was the "Old Timers' Dinner" in the evening. Approximately 400 invitations had been sent out to all who have served the hospital in any way for twenty years or more. The list included professional and non-professional personnel, members of the Board of Trustees and of the Corporation, members of the Ladies' Visiting Committee—everybody who in any way has been an MGH-er for twenty years or better. The invitation, which carried a pen-and-ink sketch of the Bulfinch Building and an automobile of 1930 vintage read as follows:

On October 16th at six p.m.,
Dr. Clark is inviting all of them
Who have worked at the M.G.H. of yore
For twenty years (a score or more)
To dinner at East Pay Cafeteria
Giving up all dates inferior.
OLD TIMERS' NIGHT is what it's called
It's hoped that you'll come and be enthralled.
So remember the date, get on your hoss
The entire treat is on the boss.

Husbands or wives are
included in this invitation

The dinner party was the gift of a generous friend of the hospital; and the wives or husbands of the "Old Timers" were guests of another generous friend who made the contribution through the Ladies' Visiting Committee.

After the 250 who had accepted the invitation were assembled in the Nurses' Dining Room (a change from the location originally chosen), those who came in costume marched in to the head table. Dr. Clark, being our General Director, very appropriately wore a general's three-cornered hat. Members of the cast of the motion picture re-enactment of Morton's first public demonstration of the use of ether for major surgery here in our Ether Dome on October 16, 1846, wore the costumes in which they appeared in the picture they made a few years ago. Dr. Means, who acted as narrator when the movie was shown later in the evening, came as poet laureate, with long cape and a wreath of gold leaves encircling his head. Dr. Culver, who acted as master of ceremonies, carried and used a megaphone and a carriage whip.

A delicious dinner of all sorts of good things was served, with student dietitians and student nurses acting as waitresses. When the dessert course was reached, Mr. Frankson, highest ranking "Old Timer", stood to cut the cake at the head table. This was the signal for the senior person at each of the other 34 tables to cut the cake at his table.

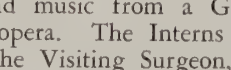
As soon as the dinner was finished, Dr. Culver introduced Dr. Clark, who responded with remarks in which he contrasted the over-all picture of M.G.H. in 1930 with that of today.

It was then time for the showing of the motion picture, and Dr. Culver introduced Dr. Means who identified the members of the cast and the roles they played, and gave interesting commentaries on the various episodes as they appeared on the screen.

This was followed by an interlude of singing, with Dr. Atherton at the piano and Dr. Cope as conductor. Everybody was provided with a sheet of lyrics (written by Mr. Francis W. Hatch, a member of our Board of Trustees, whose verses have been featured many times before at M.G.H.) which were sung to such familiar tunes as "I've been working on the railroad", "My bonnie lies over the ocean", "Battle hymn of the Republic", and "My old Kentucky home"—and all joined in lustily.

The last item on the program was a skit written, ad libbed, and acted by members of the House Staff. It was a ridiculous, exaggerated, and utterly hilarious satire on a ward visit of long ago and one of today. In the first scene the Visiting Surgeon appeared wearing a long coat, top hat, and carrying a gold-headed cane. The Intern on the ward greeted him with a down-to-the-floor bow, presented him with a flower, and then proceeded to polish his shoes. After this, the Surgeon handed the Intern his hat and stick, and approached the bed whereon his patient was lying. Covering the exposed portion of the patient's body with a very large green handkerchief, so that he would not soil his hands, the Surgeon then condescended to make his examination. The present-day scene revealed one Intern asleep, another blowing bubble gum, and a third playing with a yo-yo when the visit arrived. During the skit the Surgeon sang a song to the Interns entitled "If you're anxious for to shine", with words by Drs. Ford and Laster and music from a Gilbert and Sullivan opera. The Interns also sang back at the Visiting Surgeon, with another parody on a familiar theme. We wish we had space to include these lyrics, for they are very funny, but they will be preserved for posterity in the Archives file on Ether Day celebrations.

Thus was the party brought to a close. With grateful words of appreciation the "Old Timers" went their various ways, each one carrying with him the memory of a never-to-be-forgotten evening at M.G.H.



STAFF PUBLICATIONS

A new procedure regarding the publication of titles of articles and books written by members of the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary staffs went into effect with the July—August issue of THE NEWS. Each month, titles of new publications will appear in THE NEWS. If you have not already done so, please send all titles of books and articles you have published since (and including) January 1, 1950, to Cora F. Holbrook, Editor of THE NEWS, and continue to send her all new titles each month.

As soon as the December titles have appeared in the January 1951 issue of THE NEWS, the lists will be assembled and published as the Massachusetts General Hospital — Massachusetts Eye and Ear Infirmary Publications for the calendar year 1950. Should you fail to report a title to THE NEWS, it will not appear in the assembled list.

Be sure to include complete data: 1) classification of material, such as Anesthesia, General Medicine, Laboratory Science, General Orthopedics, Orthopedic Surgery, Miscellaneous; 2) title of article; 3) title of publication in which it appears, together with the volume number and page numbers. For books, give the publisher's name and address.

Please pay special attention to 1), above. Several of the reports already received did not include classifications of material. In such instances where the titles failed to make the classifications obvious, much time had to be spent on examining the material or procuring this information from the authors.

The deadline date for each issue of THE NEWS is the 12th of the preceding month.

All requests for reprints are to go directly to the individual authors, and *not* to Treadwell Library nor to THE NEWS.

The following titles have been submitted, in addition to the 107 already published in THE NEWS:

Biochemistry

Lipmann, F.
Symposium on chemical transformations in photosynthesis.
Federation Proc. 9:549-550.

Lipmann, F., Kaplan, N. O., Novelli, G. D., Tuttle, L. C., and Guirard, B. M.
Isolation of coenzyme A.
J. Biol. Chem. 186:235-243.

Stadtman, E. R., and Lipmann, F.
Acetyl phosphate synthesis by reaction of isopropenyl acetate and phosphoric acid.
J. Biol. Chem. 185:549-551.

Dentistry

Kite, O. W., Shaw, J., and Sognnaes, R.
The prevention of experimental tooth decay by tube feeding.
J. Nutrition 42:89-105.

Dermatology

Lever, W. F., and MacLean, J. G.
Primary familial xanthomatosis and biliary xanthomatosis (biliary cirrhosis with xanthomatosis): Electrophoretic studies.
J. Invest. Dermat. 15:173-180.

Lever, W. F., and MacLean, J. G.
The proteins in pemphigus vulgaris. III. The effect of infusions of human serum albumin on the proteins in the blood serum of patients with pemphigus vulgaris.
J. Invest. Dermat. 15:215-222.

General Medicine

Burrage, W. S.
Medical progress: Allergy.
New England J. Med. 243:50-53.

Crawford, J. D., Terry, M. E., and Rourke, G. M.
Simplification of drug dosage calculation by application of the surface area principle.
Pediat. 5:783-790.

McArthur, J. W., Harting, D., Smart, G. A., and Talbot, N. B.
Time relations between the metabolic changes of experimental diabetic acidosis and adrenal cortical hyperfunction. (Abstract)
J. Clin. Investigation 29:832-833.

McArthur, J. W., Sprague, R. G., and Mason, H. L.
The urinary excretion of corticosteroids in

diabetic acidosis.
J. Clin. Endocrinol. 10:307-312.

Rackemann, F. M., Burrage, W. S., and Irwin, J. W.
Intrinsic asthma.
Postgrad. Med. 8:134-140.

General Orthopedics

Cave, E. F.
Pain in the neck and upper extremity.
M. Clin. North America 34:1323-1334.

General Surgery

Churchill, E. D., Sweet, R. H., Soutter, L., and Scannell, J. G.
The surgical management of carcinoma of the lung: A study of the cases treated at the Massachusetts General Hospital from 1930 to 1950.
J. Thoracic Surg. 20:349-365.

Laboratory Science

Kinsey, V. E.
Modification of the apparatus used for the Baldes thermoelectric method of measuring osmotic pressure.
Rev. Scient. Instruments 21:767-768.

Neurology, Neurosurgery, and Psychiatry

Brazier, M. A. B.
Neural nets and integration of behaviour.
In Perspectives in Neuropsychiatry, London, H. K. Lewis, pp. 35-45.

Brazier, M. A. B.
Progress in Electroencephalography—1949.
In Progress in Neurology and Psychiatry, Vol. 5, New York, Grune & Stratton, pp. 269-295.

Cobb, S., and Miles, H. H. W. (Editors)
A child's reaction to adenoidectomy.
Am. J. Med. 9:242-246.

Cobb, S., and Miles, H. H. W. (Editors)
Ulcerative colitis.
Am. J. Med. 8:789-793.

Miles, H. H. W., and Cobb, S. (Editors)
A case of enuresis: Psychiatric conference.
Am. Pract. & Digest Treat. 1:812-815.

Waldfogel, S., Finesinger, J. E., and Verzeano, M.
The effect of low oxygen on psychologic performance tests in psychoneurotic patients and normal controls.
Psychosom. Med. 12:244-249.

Ophthalmology

Dunphy, E. B., and Call, F.
A method of determining the concentration of dithiocarbamates in the aqueous humor.
Am. J. Ophth. 33:44-46.

Grant, W. M.
Additional experiences with tetraethyl pyrophosphate in treatment of glaucoma.
Arch. Ophth. 44:362-364.

Grant, W. M.
Experimental investigation of paracentesis in the treatment of ocular ammonia burns.
Arch. Ophth. 44:399-404.

Kinsey, V. E., and Merriam, F. C.
Studies on the crystalline lens. II. Synthesis of glutathione in the normal and cataractous rabbit lens.
Arch. Ophth. 44:370-380.

Pediatrics

Gardner, L. I., and Murphy, J. T.
New needle for pediatric scalp vein infusions.
Am. J. Dis. Child. 80:303-304.

Gardner, L. I., Sniffen, R. C., Zygmuntowicz, A. S., and Talbot, N. B.
Biopsy and steroid-excretion studies in congenital adrenal cortical hyperplasia. (Abstract)
Cancer Research 10:218-219.

Talbot, N. B., Zygmuntowicz, A. S., Wood, M., and Christo, E.
Observations on adrenal cortical "Sugar-Fat-Nitrogen" hormone ("11-17-OCS") and "17-ketosteroid precursor" production by normal and abnormal individuals of various ages with comments on the fact that (a) there may be two ACTH's and (b) the normal adrenal cortex may not produce true androgens.
In Proceedings of the First Clinical ACTH Conference, Philadelphia, Blakiston Co., pp. 32-37.

Physical Medicine

Watkins, A. L.
Medical progress: Current problems in Physical Medicine and rehabilitation.
New England J. Med. 243:489-497.

Books

Brazier, M. A. B. (Editor)
Bibliography of Electroencephalography, 1875-1948.
Montreal, International Federation of Electroencephalography and Clinical Neurophysiology.

Dr. Abraham B. Schwartz (*CM* 1914) of the Department of Pediatrics at the Marquette University School of Medicine in Milwaukee has asked us to call your attention to a new publication which he is editing. It is *Pediatric References and Correspondence,* and we are told that the mailing list already numbers 1200, including 250 children's hospitals and university libraries.

Dr. Schwartz has sent to Treadwell Library the pages which constitute the first three issues of the references, taken from the then current medical journals, together with a description of the policy and format of the publication. Here are a few excerpts from his letter:

> The literature of pediatrics has become so extensive—new developments and discoveries so multiplied—that the most industrious person finds it difficult to keep up with it. We have scarce time to do our own particular jobs. This explains why *Pediatric References* has found a generous appreciation.
>
> The listing gathered from over 600 journals is issued bimonthly under the aegis of the Department of Pediatrics and the Library of the Marquette University Medical School.
>
> In the subject index, we shall keep in mind the practical needs of the pediatrician and physician interested in children.
>
> An actually current listing will be made, subject only to the lags of delivery of journals. This is possible since there will be no critical reviews—the cause of practically unavoidable delays in abstracts.
>
> It is our hope that correspondents will report their own up-to-the-minute experiences, which can be informally included in each issue on a blue sheet.
>
> While our list may not include highly specialized reports of basic research, we shall not intentionally overlook the special journals, nor let anything pediatrically remarkable escape us.
>
> We welcome your suggestions and comments.

For further particulars, address Dr. Schwartz at the Department of Pediatrics, Marquette University School of Medicine, 561 North 15th Street, Milwaukee 3, Wisconsin.

Brief bits:—

Dr. Robert A. Broome, Jr. (*M* 1944) and Dr. Frank C. Bone announce the opening of offices for the practice of Gastroenterology, Cardiovascular Diseases, and Internal Medicine in Suite 423, American Building, 307 South Orange Avenue, Orlando, Florida.

Dr. George H. Lawrence, Second Assistant Resident in Surgery on our House Staff, went to the Snyder-Jones Clinic, Winfield, Kansas, on October 1, for six months of affiliated service.

MASSACHUSETTS EYE & EAR INFIRMARY

Infirmary doctors took two out of the three prizes for exhibits at the recent meetings of the Academy of Ophthalmology and Oto-Laryngology held in Chicago, October 9-13. Dr. David Donaldson, Assistant in Ophthalmic Research in the Howe Laboratory, took first prize on his stereoscopic photographs of external eye diseases; and Dr. Brendan D. Leahey, Associate Surgeon, won third prize with his exhibit on the corneal transplant. These prize-winning exhibits also were on display during the Infirmary Open House, October 19. Among Infirmary doctors who gave papers at the academy sessions was Dr. David G. Cogan, Director of the Howe Laboratory, who delivered a paper on "Applied anatomy and physiology of the cornea".

Dr. Philip E. Meltzer, Surgeon-in-Chief of the Winthrop Foundation and Clinic for the Deaf, returned September 27 from Europe where he participated in the Clinical Congress in Audiology held in Stockholm. Dr. Meltzer gave three talks on the "Fenestration operation", "Incisions of the fenestration operation", "Post-operative care of the fenestration operation", and "Accidents and sequelae of the fenestration operation". He also visited hospitals in Paris and London to observe European surgical techniques. Dr. Julius Lempert, founder of the Lempert Institute in New York City, accompanied Dr. Meltzer on his trip.

Dr. LeRoy A. Schall was guest speaker at the Westmoreland County Medical Society meeting at Greensburg, Pa. on September 5. He spoke on "Cancer of the larynx".

Dr. Aram S. Baghdassafian of Beirut, Syria, has been observing on the Eye Service.

Dr. Antonio Grignolo, Clinical Assistant in the Retina Service, returned to Europe on October 9.

The Infirmary was privileged to have as its guest during the week of September 11, Dr. Honore B. Fell, Director of Strangeways Research Institute at Cambridge, England. Dr. Fell was in the U. S. for the International Congress of Cell Biology at Yale University, of which she was chairman. She was particularly interested in the embryo of a mother with rubella — an investigation carried on by Dr. George Kelemen of the Mosher Laboratory. Dr. Fell also demonstrated to a small group of Infirmary and MGH

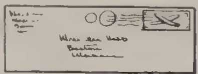
BIOGLETS

Dr. Irving P. Ackerman, Intern in Medicine—born in Newark, New Jersey; B.A., Columbia University, 1946; M.D., Columbia College of Physicians and Surgeons, 1950; home address: 68 Hansbury Avenue, Newark 8, N. J.

Dr. Lawrence J. Barrows, Assistant Resident in Neurology—born in Trego, Wisconsin, September 23, 1924; St. Thomas College, St. Paul; St. Norbert College, Wisconsin; University of Michigan; U. S. Army: 1942-46; M.D., University of Cincinnati, 1949; Intern, Cincinnati General Hospital, 1949-50.

Dr. Charles G. Craddock, Jr., Assistant Resident in Psychiatry—born in Lynchburg, Virginia, March 1921; B.A., University of Virginia, 1941; M.D., University of Virginia, 1944; Intern in Medicine, University of Rochester, N. Y., 1944-45; U. S. Navy: Pacific Theatre, 1945-46; Fellow in Internal Medicine, University of Rochester, with special work in Hemotology, under grant from A.E.C., 1946-48; Assistant Resident, Department of Medicine, University of Virginia, 1948-49; Chief Resident, Department of Medicine, University of Virginia, 1949-50; married; two children—Hilah and Katherine.

Dr. LeRoy L. Eldredge, Jr., Assistant Resident on the Children's Medical Service—born in Middleborough, Massachusetts, March 17, 1920; A.B., Dartmouth College, 1942; M.D., Tufts College Medical School, 1945; Intern, Mary Hitchcock Memorial Hospital, Hanover, New Hampshire, 1945-46; U. S. Navy: stationed for over one year at the American Embassy, London, England, 1946-48; Resident in Pediatrics, Mary Hitchcock Memorial Hospital and Hitchcock Clinic, 1948-50; home address: 215 Main Street, Hingham, Massachusetts; married; two sons.



New addresses:—

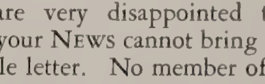
Dr. David D. Bloom (*a. dn. s.*), 20 Gloucester St., Boston, Mass.
Dr. Richard W. Garrity (*NS* 1950), U. S. Naval Hospital, San Diego, Cal.
Dr. John R. Graham (*WM* 1936), Faulkner Hospital, 1153 Centre St., Jamaica Plain, Mass.
Dr. Albert K. T. Ho (*Oto-Lar.* 1949), Central Medical Bldg., Beretania at Kalakaua, Honolulu, T. H.
Dr. Byrl J. Kennedy (*M* 1946), Room F 211, New York Hospital, 525 East 68th St., New York 21, N. Y.
Dr. Terry E. Lilly, Jr. (*ES* 1943), Exeter Memorial Hospital, Exeter, Cal.
Major Wilbour C. Lown (*past Head of Photographic Laboratory*), Signal Corps Photographic Center, 35-11 35th Ave., Long Island City 1, N. Y.
Lt. Daniel F. Milam, Jr. (*S* 1949). Air Anti-Submarine Squadron 25, F.P.O., San Francisco, Cal.
Dr. Thomas S. Risley (*ES* 1942), 17 Everett St., Beverly Farms, Mass.
Dr. Adney K. Sutphin (*WM* 1943), 923 West Franklin St., Richmond, Va.
Dr. Daniel V. Troppoli (*N* 1927), 380 Broadway, Providence, R. I.
Dr. Alfred Yankauer (*CM* 1941), 257 Denver St., Rochester 9, N. Y.
Dr. Eleonore C. Zaudy (*a. CM*), 1247 Beacon St., Brookline 46, Mass.

We have a young friend named Jerry. Many of you, also, know him. But what you may not know is that Jerry has two diametrically opposed sides to his nature—in fact, he is a very definite example of the so-called split personality. To explain—Jerry is as gentle and subdued as one could wish, so far as humans are concerned; but let Jerry get even a glimpse of one of his own kind and he is immediately a changed character. He becomes a Joe Louis, an Ezzard Charles, and the entire Light Brigade of legendary fame, all rolled into one.

Well, sad to relate, a few weeks ago Jerry made a very disastrous "charge", was struck by an automobile, and found himself the next day in hospital with a broken hip. Jerry's hospital bill for one week alone reads:

Hospitalization at $2.00 per day	$14.00
Operation	25.00
X-ray	5.00
Medicine—20 cc serum	1.75
Special nursing—blood transfusion	5.00
	$50.75

Why are we telling you all this? Because we thought you might be interested and amused to see how similar to our own bills for hospitalization (except for the amounts charged) is this one from Angell Memorial Animal Hospital.



We are very disappointed that this issue of your News cannot bring you even one single letter. No member of the vast MGH family has found (or made) time during the past month to write home. The lowering of that little flag on our mail box, pictured above, is a sad occasion for us—especially as we realize it cannot be raised again without your help. Just one letter a year—long or short—from each of you would set the flag flying again and keep it so for all of us. Will you do your part?

THE NEWS

No. 96 Boston, Mass. December 1950

CANCER RESEARCH MOVES AGAIN

During the past year we have watched with keen interest the gradual emergence from behind the Bulfinch Building of the Massachusetts General Hospital's new research building. Before the actual move into these new quarters is made, there inevitably passes in review before our memories a parade of distinguished investigators and clinicians whose contributions to our knowledge of cancer have led up to the need for this building.

The Massachusetts General Hospital has always been a pioneer in work on cancer. In 1838, Dr. John C. Warren, Professor of Anatomy and Surgery at Harvard University and Surgeon at the Massachusetts General Hospital, wrote the first American book on the subject—*Surgical observations on tumours with cases and operations*. The minutes of the Medical Board, Surgical Section, as far back as 1881 indicate that Dr. J. Collins Warren "made some remarks about the advantages of having tumors systematically examined and a record made to be entered with each case." The Massachusetts General Hospital was one of the first general hospitals to establish a tumor clinic. Before the formation of this clinic, Dr. George W. Holmes, who held the position of Roentgenologist beginning in January 1917, called specialists from other departments into consultation on the cases which were being diagnosed or treated in his department. In 1923, Dr. C. Guy Lane was made Consultant Dermatologist to this clinic, and shortly thereafter Dr. Robert B. Greenough started serving in the capacity of Surgical Consultant. Dr. Lincoln Davis became Consultant in Gynecology, and Dr. Means was associated with this clinic in connection with thyroid cases. The Tumor Clinic was formally organized as a unit in April 1925, with the purpose of providing consultations before treatment and for following each case. Regular days were set for certain types of cancer patients, and members of various departments with special interest in cancer were present at the sessions pertaining to their fields. In 1930, the clinic obtained the services of a full-time social worker. Although the Tumor Clinic has always been furnished its space by the X-ray Department, the two departments operated independently until 1937, when a closer amalgamation brought about the policy of each radiation patient being reviewed by a physician and a surgeon as well as by the radiologist.

A good deal of outstanding clinical investigative work was carried on in the thirties, but not much laboratory work was involved other than pathology. One need only recall Dr. Meigs's work on cancer of the gynecological tract, Dr. Churchill's on cancer of the lung, and that of Drs. Greenough and Simmons on cancer of the breast to realize the very high level of this contribution.

It was with this well-organized clinic that many of the activities of the Collis P. Huntington Memorial Hospital were interdigitated in 1942. This hospital had been operated under the aegis of the Harvard Cancer Commission since 1912, and had a distinguished record of both clinical and research work.

A large sum of money was given by Caroline Brewer Croft in 1899 for research on cancer, and the commission which supervised this work became known as the Harvard Cancer Commission. The work for the first years was largely restricted to laboratory investigation and five biennial reports were published, covering work on the production and transplantation of tumors, and similar investigations. Tyzzer showed the first evidence of the heredity of cancer in 1907 in his work on studies of inheritance in mice with relation to the incidence of tumors. Further pioneer work along this line was carried on by the Genetics Laboratory under Dr. C. C. Little.

Among the factors which turned the interest of the Cancer Commission toward the clinical aspects of cancer was a spontaneous cure which occurred in a New York patient. The serum from this patient was injected into other cancer cases, and although the results were ultimately unsatisfactory, this temporary burst of optimism did much to stimulate public interest and medical opinion, so that funds became available and medical men turned to the idea of opening a specialized hospital to apply the knowledge gained in the laboratories to improved care of the cancer patients. The new treatment of cancer by X-ray and radium contributed in no small part to this interest. Through generous public support, partly in the form of a large gift from Mrs. Collis P. Huntington in memory of her husband, Harvard was able to build its specialized hospital and open the doors to patients in March 1912.

✓ The Collis P. Huntington Memorial Hospital was a leader in cancer research and treatment. It was one of the first hospitals in this country to use X-ray and radium for effective treatment of cancer, and methods for the safe administration of these agents were devised. A method of measuring X-rays was the work of one of the staff members — Dr. William Duane, who designated the units as "r" units, after Roentgen. He also did pioneer work in developing higher voltage X-ray, particularly at the 200,000-volt level. This interest was continued, and for the treatment of deep-seated malignancies the hospital acquired the first constant voltage generator which could produce 1,200,000-volt short wave X-rays. This machine was designed by Dr. John G. Trump of the Massachusetts Institute of Technology, with the Van de Graaff type of accumulator.

In 1922, the medical laboratory of the hospital was established and named in honor of Dr. J. Collins Warren who had done so much for the Cancer Commission and the Huntington. Dr. George R. Minot was working in the laboratories of this hospital when he developed the treatment of pernicious anemia. Other medical studies on lymphoma and leukemia were carried out.

The electro-cautery knife, a most valuable piece of equipment for surgery, was designed by Dr. William T. Bovie primarily for use in cancer surgery. Dr. Bovie also instituted a course in biophysics for graduate students in 1919, and an undergraduate course in 1920. Dr. Bovie's work included investigations on photo-electric potentials, and the action of light rays on cell life and growth.

Around 1930, it seemed obvious that one couldn't study cancer by studying cancer alone. After prolonged discussion, the Harvard Cancer Commission agreed that the study of cancer must involve normal growth as well, and that studying the mechanisms which influenced growth of any kind was a more fundamental approach to the problem than the production of tumors by various new ways. Our work since then has largely consisted of this sort of growth study, and although in the thirties the work was criticized as being not really a study of the cancer problem, now everyone agrees that this is an essential approach in order to understand the disease. Such studies were undertaken, and advances were made in knowledge of the relations of hormones to normal and abnormal growth, of the mechanisms involved in cellular regeneration following partial extirpation of the liver, of intermediary metabolism in normal and abnormal tissues, of lead and calcium metabolism, and of enzymes (like phosphatase) in normal and neoplastic cells. Studies on the effects of radium poisoning (which produces bone tumors) were made in the middle thirties with Professor Robley D. Evans of the Massachusetts Institute of Technology.

The Huntington Hospital had great influence in the cancer field. Many contributions to knowledge about cancer are manifest in the long series of articles published by the Cancer Commission, which now number more than seven hundred publications. Staff members trained in this hospital helped to organize the Pondville Hospital, the cancer unit at the Westfield State Hospital, the Palmer Memorial at the New England Deaconess Hospital, as well as the state cancer clinics. A tumor diagnosis service was set up by the Cancer Commission and subsequently financed by the state. Specimens came to it for diagnosis from physicians and hospitals all over the state. This pathological service, together with the laboratories under Dr. Shields Warren, remained at Harvard when the clinical activities and the medical laboratories moved down to the Massachusetts General Hospital, and this unit continues its excellent record of pathological research, as well as its public service of state-wide pathological diagnosis.

In 1941, it was decided that this hospital—the only one owned by Harvard—was too small an institution to meet adequately the increasing demands on it, and should either be enlarged or amalgamated with a bigger hospital. For some time the Cancer Commission had wanted to devote its limited resources for work on cancer to research and teaching, rather than to the expensive operation of a small, specialized hospital. It was believed that more satisfactory care of patients could be accomplished in a large general hospital, because of the ready availability of many able physicians and surgeons with varied trainings. Therefore, the decision was made to amalgamate with the Massachusetts General Hospital, and letters were written advising physicians and patients of the change. Largely through the work of Dr. Ernest M. Daland, the Huntington clinics were carefully interdigitated with those of the Tumor Clinic at M.G.H., so that patients might come on regular days. Most of the doctors who had seen patients at the Huntington were also staff members at the Massachusetts General and their interests in cancer were furthered by this concentration. The number of beds allotted to cancer patients was increased. M.G.H. already had a million-volt X-ray machine, so this was not lost to the patients. Patient records were brought down and the transfer of the clinical activities was effected in 1942. This increase in patients, together with the clinical activities and research which were going on in the Huntington, gave an added impetus to the clinical interest in the Tumor Clinic and to the whole hospital. There was great activity in many areas, and the care and understanding of cancers of specialized areas continued to improve, so that many men here are among the great cancer experts in their specialties.

The medical laboratories also were transferred and gradually got under way, and so the cancer unit at Massachusetts General became complete, not only with facilities for clinical investigation, but also with laboratories for a fundamental attack on the problem of normal and malignant growth. The University continues its financial support, while M.G.H. gives laboratory space for housing the project. This mutual responsibility has worked well, and the laboratories have grown and prospered. It was lucky the decision to amalgamate was made, for within a week war was declared, and the Second World War would have made difficult the staffing of the little Huntington Hospital and would have added to its deficits. On the other hand, the increase in personnel at the Massachusetts General proved beneficial to that institution during the emergency.

During the war years, the exigencies of that period made compromise with cancer research necessary. Research of more immediate urgency, such as the studies on traumatic shock, largely replaced the regular investigations. All of the work done, however, played a part in providing further knowledge of the growth problem, although in rather a remote way.

During the years after the war, the opportunity to study cancer changed dramatically. Twenty years before, time was largely spent in producing tumors without particular interest in why they occurred. Now they can be produced in hundreds of ways which are so divergent that this work hasn't elucidated the crux of the problem at all, even though it provides the material for much fundamental study. In the last ten years, people have been trying to find out just what the subtle change is which occurs in the deviation of growth from normal to abnormal. Up to now, the fundamental cause remains obscure.

Recently it has been possible to expand our studies on normal and abnormal growth to attacks from many angles. We study the problem by analyzing the differences from normal inside the cancer cells, and by seeking the influences in the body which cause variation in the rate of cellular growth. Formerly, one could study only the break-down of protein. Now, Dr. Zamecnik and Dr. Frantz are analyzing quantitatively the ability of tissues to make protein, by use of amino acids made with radioactive isotopes by Dr. Loftfield. They have demonstrated that different tissue cells synthesize protein at different rates — for example, tumor cells do this seven to ten times more rapidly than normal cells. Dr. Zamecnik is investigating the enzymes in body cells, which are so important in their chemical reactions, and which may well be the variant in abnormal cell division.

A study of protein synthesis in tissues radiated with X-ray has been carried out recently by Dr. Louis H. Hempelmann, and he has shown that even after heavy doses of X-ray, the tissues of mice can still synthesize protein — the syntheses, however, being less in irradiated muscle and spleen tissue than in irradiated liver. These are fundamental approaches to the problem of normal and abnormal cell division, for cells have to make protein to be able to divide.

Another growth mechanism of great interest to our laboratory is that by which normal cells are caused to divide in the body. When part of the liver is removed from rats, a replacement of cells occurs which is fairly quantitative, and within two weeks the number of liver cells has returned to the original amount which was present before the operation. Then the production of new cells ceases and the liver returns to a resting state. This represents fundamental problems in normal and abnormal growth. What makes the normal liver cells divide so rapidly?—and why do they stop dividing, while cancer cells divide indefinitely? Dr. Nancy L. R. Bucher has made Siamese twins and triplets with rats, and subsequently removed much liver tissue, although leaving one animal with an intact liver. Increased cell division in the intact liver has indicated the probability of a blood-borne stimulus to growth. This is a very interesting observation and merits further clarification. Dr. Bucher is also attempting, with some success, to separate tissue cells so that they may be studied singly; and microspectroscopic as well as other studies on isolated liver cells and nuclei are being carried out.

Another phase of the elucidation of growth mechanisms has been the work on beryllium, which has demonstrated that this light metal interferes with the enzyme phosphatase. Dr. Mahlon B. Hoagland has also found that a low concentration of beryllium has growth-stimulating properties in plants when there is a magnesium deficiency. We are interested in this type of work, because beryllium will produce tumors of bone in rabbits and its ways of influencing growth are therefore important.

For a number of years a study on the growth of deer antlers has been carried on with Dr. George B. Wislocki and Dr. Charles M. Waldo of the Harvard Medical School. This is an interesting tissue to study, because of the seasonal regularity of its growth and shedding, and information has been gained on how the anterior pituitary gland and the gonads supplement each other in regulating this growth and influencing the shedding of the antlers.

The Huntington Laboratory has long been interested in the relation of sex hormones to cancer and growth. That large area of our program is under the direction of Dr. Ira T. Nathanson. He has been at work on this for nearly fifteen years in the analysis of endocrine tumors in childhood and, sometimes with Dr. Meigs, in tumors of the female genitalia. Much knowledge has been accumulated on the response of breast cancer and tumors of the prostate to the sex hormones stilbestrol and testosterone. Dramatic improvement is seen in a fairly large percentage of cases, but this, unfortunately, is not always of long duration. Other estrogens have also been explored and found to have similar results with breast cancer. The group of investigators working under Dr. Nathanson's supervision is now exploring many new chemicals related to sex hormones, to analyze the component which causes this tumor regression. It is a complicated problem which takes time for analysis, but excellent progress is being made. Mallinckrodt—Ward 4 facilitates this kind of work. In fact, it could not be done properly without such a ward.

New analytical techniques are always needed in our work to understand the chemical changes which cause such influences on specialized tumors. New methods have been devised and old ones improved by Drs. Lewis L. Engel and Wilson R. Slaunwhite for the estimation of female sex hormone metabolites in urine, and also they can now analyze for steroid alcohols in urine—substances which were formerly neglected because analytical methods were lacking. These techniques are being used in routine studies of patients, and it is expected that much interesting information will emerge on the differences in the ways in which cancer and other patients break down sex hormone products. These studies are correlated with exploration of other abnormalities which may exist in the cancer patient. For example, Dr. Rita M. Kelley is trying to find out the reason for anemia in cancer patients.

New cancer detection tests are also being reviewed, largely by Miss Tibbetts. Although the tests have not yet proved sufficiently accurate for diagnostic purposes, they do indicate the presence of abnormality of plasma protein in cancer, and this deserves further careful investigation. Final evaluation of the benefits of new chemotherapeutic agents, such as ACTH and cortisone, administered to patients under the supervision of Dr. Nathanson, Dr. Kelley, and Dr. William H. Baker, must await the completion of the data-gathering process which is now in full swing. All the new drugs which have been used so far have one characteristic in common — any inhibiting influence they may exert proves to be temporary. Of course, it is encouraging that any influence can be obtained, but why the cancer breaks through this inhibition and starts growing again remains an enigma which must be solved.

Evidence for this may be gleaned from looking at the pathological reactions in the cancers. Good increase in knowledge has occurred recently in analyzing chemical reactions in single tissue cells, and we are utilizing these techniques. Analysis has been made by Dr. William J. Emerson, and continues under Dr. Edgar B. Taft, of the histological and cytochemical changes which occurred in the cases of cancer of the breast which had received hormonal therapy. In this connection, Dr. Jesse F. Scott has been working on the application of spectroscopic methods to the pathological materials of this laboratory, through the facilities of the Department of Biology at the Massachusetts Institute of Technology.

One of the best features of present-day work on cancer is the ready interchange of ideas and the sharing of facilities by the workers in this and allied fields. There is close cooperation among the investigators in our own laboratories, and they are able to call on such men as Drs. Albright, Bauer, Butler, Lipmann, Means, and Meigs within the hospital for advice and assistance in the various phases of the problem. The close relationship with Harvard and the Massachusetts Institute of Technology makes it possible to draw on the scientific minds of these institutions for help — notably Professor Robley D. Evans and Professor Francis O. Schmitt at the Massachusetts Institute of Technology, and, from Harvard, Dr. Arthur K. Solomon for information on new counting devices and on problems in physics, Professor R. B. Woodward for help in synthetic organic chemical problems, Professor A. Baird Hastings for valuable advice on problems in biological chemistry, and Professor George B. Wislocki for information on various phases of cytochemistry.

By this cooperation it has been possible to give young investigators a broad training in our laboratories, and whenever special assistance or the acquiring of new techniques was desirable, these institutions have always been most cooperative.

Some of our staff members, in turn, act in a tutorial capacity in the Biochemistry Department of Harvard College. In addition to lectures given by our people to medical students in various courses, an elective course in neoplastic disease is given to fourth year students of the Harvard Medical School by cooperation of the Tumor Clinic staff. Formerly this course was given once during the year to about ten students. This year the number of applicants has made it necessary to give the course four times.

One cannot think of the activities of the Huntington without acknowledgment of the public interest in cancer research which has resulted in support so wisely channeled into effective use through such organizations as the American Cancer Society, Inc., the National Cancer Institute, the U.S. Atomic Energy Commission, and other private foundations. Behind us are the years when grossly insufficient financial support interfered with work on cancer, and we have recently been able to expand our efforts in promising directions. The result is that we have become very crowded in our laboratories.

With this support it has been possible not only to train an able group of young scientists to carry on cancer research, but also to expand research work so that it is a well-coordinated coverage of many of the ramifications of the cancer problem. Information is gradually and painstakingly being gathered, and every resource is being made available for further progress. Thus, it is with gratitude for support and appreciation of the efforts of both scientific predecessors and contemporaries that we go into the new building, and take with us high hopes for future results in contributing to the knowledge of cancer.

Joseph C. Aub, M.D.,
Physician

* * *

The City of Boston was host to the American College of Surgeons during the thirty-sixth annual Clinical Congress, held from October 23 through October 27. Attendance far exceeded the original estimate and housing became a serious problem, but the Congress was, apparently, extremely satisfactory in every other respect, and the vast majority of comments from the visitors were very favorable in nature.

The Massachusetts General Hospital program was divided into three distinct presentations. First of all, there was the usual hospital program held in the Bigelow Amphitheatre and divided roughly into anatomic sub-groupings which permitted general surgery and all of the surgical specialties to review recent progress in the management of their specific types of disease. Simultaneously, each morning, there was presented a refresher course which permitted a very intensive and concentrated review of five specific subjects selected by the Central Committee. Finally, there was the official television program which took the place of the operative clinic usually presented during the Clinical Congress.

Although many attractions were offered simultaneously during this crowded week, every one of our presentations was well attended and well received. The surgeons on the television performed daily before capacity audiences at Mechanics Hall. One receiver was installed on 3A of the White Building — a courtesy extended by Smith, Kline & French, and gratefully received by the Hospital Staff, for it enabled any member of the hospital family, who wished to do so, to participate, to some extent, in this program, where otherwise it might not have been possible at all.

Of course, many an alumnus of M.G.H. took this opportunity to make "the trip to Mecca", some coming from as far away as the states of Oklahoma, Nevada, and Washington.

Interest in the Congress was evidenced outside professional ranks. For instance, Lamson Hubbard volunteered to contribute one of their Boylston Street windows for a display of old surgical instruments and other items pertaining to the history of surgery and anesthesia at M.G.H. People from all walks of life crowded about the window during the entire period of the exhibit; and interesting, indeed, were the comments overheard and the questions put to us by the onlookers, as we mingled anonymously with the crowd to witness their reactions.

The extraordinary success of the meeting was due, primarily, to the wholehearted cooperation of every individual in the hospital who was asked to take any part in it. It was very gratifying to notice with what willingness this help was given, and such responses certainly made the duties of those of us entrusted with the organization of the program extremely easy to carry out.

H. U.

A Postgraduate Course in Gynecology was given to 40 students, through the Harvard Medical School, October 9-21. The lectures were given by members of the MGH staff and a few people from other hospitals who were invited to lecture.

Among the postgraduate students attending was one of our own former residents—Dr. Nathan D. Munro (*ES* 1942 & *r.s.* 1944), from Grosse Point, Michigan. Dr. Donald N. Sweeny, Jr., another of our former residents (*WS* 1941 & *r.s.* 1943), had registered for the course, but had to cancel at the last moment because of illness in his family.

The 16th Postgraduate Course in the Treatment of Fractures and Other Traumatic Conditions was given at the Massachusetts General Hospital, under the auspices of the Harvard Medical School, from the 30th of October to the 4th of November, inclusive. This year there were 86 students registered—the largest number to take the course since the war.

As is well known to readers of THE NEWS, this Postgraduate Course was first given in 1928, and, with a few interruptions, has been offered every year since that time. In more recent years—particularly since the war—its scope has been broadened to include trauma other than that resulting from fractures, so that it now encompasses the management of soft tissue injuries, chest and abdominal wounds, burns, bone metabolism, treatment of surgical shock, injuries to the central nervous system, etc. This year, the students represented 25 states of the U.S.A., as well as Canada and France. Taking part as instructors were 37 members of the various medical and surgical departments of the Massachusetts General Hospital.

During the years that the course has been given, there have been 1366 students from all the states in the Union and from ten foreign countries.

The School of Nursing has opened the Flower Shop for a second season. The corner of the corridor near the General Store is bright again with roses, carnations, asters, azaleas, and other lovely flowers, on sale for patients' visitors and members of the hospital family.

The Flower Shop was originally established by the School of Nursing in the spring of 1950, primarily to bring more flowers into the hospital to brighten wards and corridors, and secondarily as a means of securing a small but continuous contribution to the Nursing School Endowment Fund. As the project has continued, two other values have been found: first, a patient on the ward, lonely because of the lack of visitors or tangible remembrances, may receive a bunch of flowers from the School of Nursing; and secondly, a student nurse who loves flowers and wishes opportunity for self-help may work from two to four hours a week in her spare time to add to her spending money.

The shop will sell special flower arrangements for dinner parties and teas. Corsages may be ordered. Flowers or plants will be delivered to patients in all divisions of the hospital as ordered. Visitors and orders are welcomed.

R. S.

OFFICIAL NOTICE

Blood plasma is badly needed for civilian defense. The stocks in this hospital and in the state at large are critically low. Should a bombing occur, we could not handle our needs.

Please give your blood now, and encourage all who are interested in the hospital or in civilian welfare to do so.

The Blood Bank has removed all restrictions on donors (except those pertaining to the donor's own health) in stock-piling blood plasma to be labeled "for emergency use only". This means that persons who have had jaundice, malaria, allergies, etc. may now give blood if they are between 18 and 60 and pass the bank tests. Blood from those who have been jaundiced will be converted by the state into serum albumin. The rest of the blood can be given safely in an emergency.

DO YOUR PART. THE NEED IS GREAT.

Lamar Soutter, M.D.,
Director of the Blood Bank

RADIOLOGY DEPARTMENT

Once again Dr. Robbins has very kindly taken the time and trouble to send us bits of news concerning present and past members of his department. We do so wish other Heads of Services would follow suit.

Here are Dr. Robbins's notes:

Dr. Joseph Hanelin, Associate Radiologist, in association with Drs. Armin Klein, Robert J. Joplin, and John A. Reidy of the Orthopedic Surgery Department, presented a paper and an exhibit entitled "Roentgenographic features of slipped capital femoral epiphysis", at the annual meeting of the American Roentgen Ray Society in St. Louis in September. Their exhibit received honorable mention.

The following men have left for active military service: Dr. J. Garland Wood is now stationed at Tripler General Hospital, Honolulu, and Dr. Donald W. S. Stiff now has an APO number from San Francisco.

New addresses:—

Dr. Clemens E. Benda (*a. Psychiat.*), 21 Bay State Road, Boston, Mass.
Dr. Peter T. Brooks (*ES* 1943), 214 Drumheller Bldg., Walla Walla, Wash.
Dr. Richard R. Carter (*r.p. N* 1942), 553 Medical Arts Bldg., Portland 5, Oreg.
Dr. Norman E. Freeman (*r.s. WS* 1935), 1435 Fourth Ave., San Francisco 22, Cal.
Dr. John L. Fromer (*clin. a. D*), 66 Arnold Road, Wellesley Hills 82, Mass.
Dr. Richard E. Goldsmith (*clin. & res. fel. M* 1950), 2347 Madison Road, Cincinnati 8, Ohio.
Mr. and Mrs. Francis C. Gray (Mr. Gray is Chairman of our Board of Trustees, and Mrs. Gray is a member of our Ladies' Visiting Committee), 62 Beacon St., Boston 8, Mass.
Dr. C. Guy Lane (*Bd. of Consult.*), 220 Marlborough St., Boston, Mass.
Dr. Wilfred Leith (*clin. & res. fel. M* 1950), Royal Victoria Hospital, Montreal, Canada.
Dr. Allen P. Winsor (*WM* 1919 & *WS* 1921), 1101 Beacon St., Brookline 46, Mass.

MASSACHUSETTS EYE & EAR INFIRMARY

Open House, held at the Infirmary on October 19, gave many of Boston's doctors their first opportunity to see our new operating suites and medical facilities which now make it possible for the Infirmary to give more complete service to the community. The operating rooms have the latest developments in hospital construction and equipment, including conductive flooring, air-conditioning, and stainless steel equipment throughout. Three viewing galleries, with two-way speaker systems and binoculars that enable the student to observe minute surgery, make for ideal teaching possibilities.

The doctors viewed operations from the galleries from 10 to 11, when the operating floor was opened for first-hand inspection. Coffee was served in the Surgeons' Parlor, and there were individual tours to observe the rest of the Infirmary's reconstruction.

During the Boston meeting of the American College of Surgeons, held October 23-27, the operating rooms and clinics of the Infirmary were open to the visiting surgeons. Over 140 doctors visited the Infirmary, most of them to observe operations from the Infirmary's new galleries in the OR.

One of the highlights of the ACS's conferences and symposiums was the meeting of surgeons interested in Otorhinolaryngology, where, before 150 doctors, a five-year-old child took part in a demonstration of the speech classes offered at the Infirmary. Robert Seamans, "educationally deaf" since birth, recited nursery rhymes in a clear childish voice. His teacher, Miss Helen Patton of the Clinic for the Deaf, explained her methods of speech training which have made it possible for Robert to attend 1st grade in the regular schools. Dr. Philip E. Meltzer, Surgeon in charge of the Clinic for the Deaf, spoke on the importance of new electronic devices in the rehabilitation of the hard-of-hearing person.

Three Infirmary doctors gave instructing courses at the Academy of Ophthalmology and Oto-Laryngology, held October 7-13 in Chicago. Dr. Werner Mueller, Director of the Bacteriology Laboratory at the Infirmary, spoke on "Audiometry"; Dr. Harris P. Mosher, formerly Chief of Oto-Laryngology, gave a course on "The esophagus"; and Dr. Philip E. Meltzer conducted a two-day seminar on "The practical approach in the management of deafness".

Dr. LeRoy A. Schall, Chief of Oto-Laryngology, took part in a symposium on "Cancer" at the Academy meetings.

Miss Ann Stromberg, head of the Orthoptic Clinic, attended the meeting of the American Association of Orthoptic Technicians, held in Chicago on October 7-13 in conjunction with the meetings of the Academy of Ophthalmology and Oto-Laryngology. She was accompanied by Miss Carol Densmore of Worcester, a former student in Orthoptics at Simmons College, who took her practical training at the Infirmary.

The Infirmary was privileged to have two distinguished visitors from abroad during November. Dr. Hector Jorge, Chief Neck Surgeon at the Cancer Hospital in Buenos Aires, and Dr. Gavin Livingston of the Radcliffe Infirmary, Oxford, England, spent several days observing in the Infirmary clinics and operating rooms. Both doctors were guests of the Oto-Laryngology Service.

Dr. Warren B. Haley and Dr. M. Wayne Woodard completed their residencies in Ophthalmology on October 31. Both Dr. Haley and Dr. Woodard will remain in New England. Dr. Woodard will join Dr. Brendan D. Leahey at 9 Central Street, Lowell, and Dr. Haley will have two offices — 1180 Beacon Street, Brookline, with Dr. Mahlon T. Easton, and 27 Lloyd Street in Winchester.

Dr. Volker Stapff of Montevideo, Uruguay, has been appointed resident in Oto-Laryngology, to commence December 1. Dr. Stapff is taking the Basic Science Course in Oto-Laryngology at Harvard Medical School and working in the Mosher Laboratory prior to the beginning of his residency.

The Ophthalmic Staff will hold its semiannual dinner meeting on December 12 in Vanderbilt Hall dining room, Harvard Medical School. The meeting is under the supervision of Dr. Merrill J. King.

Dr. John J. Shea, resident in Oto-Laryngology, and Dr. Robert Fink, recently appointed resident in Ophthalmology, were called into active service of the armed forces in October. Dr. Fink is stationed at San Diego Naval Hospital, San Diego, California. Dr. Shea, who holds a Navy commission, has been transferred by the Navy to the Army and is now serving in Texas. Dr. Joseph Ginsburg was called by the Ophthalmic Staff to take the place of Dr. Fink.

The Board of Trustees, at their meetings on October 6 and 20, and November 3, voted:

To grant leave of absence to Dr. William N. Christenson for one year, for military service;
To accept the resignation of Dr. Lewis Francis from the position of Assistant Anesthetist, as of October 15;
To grant leave of absence to Dr. Gustav G. Kaufmann, Assistant in Medicine, during his military service.

To appoint:

Dr. Robert L. Berg as Assistant to the Director for Research and Education, effective January 1, 1951;
Dr. Thornton Brown as Assistant in Orthopedic Surgery, as of October 1;
Dr. Richard B. Cohen as First Assistant Resident in Pathology, for the year beginning July 1, 1951;
Dr. Donald T. Devine as Intern on the Children's Medical Service, beginning July 1, 1951;
Dr. Basil C. Gray as Assistant in Dermatology;
Dr. Phillips Hallowell as Assistant Resident in Anesthesia, beginning November 1;
Dr. Clara R. Johns as Assistant Resident in Psychiatry, beginning July 1, 1951;
Dr. Carroll B. Larson to the Board of Consultation;
Dr. Merrill Parelhoff as Assistant Resident in Anesthesia, beginning July 1, 1951;
Dr. Arthur H. Rosenbloom as First Assistant Resident in Pathology, for the year beginning July 1, 1951;
Dr. Arthur S. Spangler as Assistant in Dermatology;
Dr. Robert F. Tilley as Assistant in Dermatology.

At their meetings on October 11, 18 and 25, and on November 1, the General Executive Committee voted:

To reinstate Dr. Arthur S. Keats as Assistant Resident in Anesthesia, as of September 1;
To continue the appointment of Dr. George D. Ludwig as Research Fellow in Surgery, assigned to Neurosurgery, until November 15;
To reappoint Dr. Albert J. D. Michel as Clinical and Research Fellow in Surgery, through June 30, 1951;
To assign Dr. John McL. Morris to the Gynecological Service of the Tumor Clinic;
To reappoint Dr. Morton Grove Rasmussen as Clinical and Research Fellow in Surgery, assigned to the Blood Bank.

To promote:

Dr. Frank R. L. Egloff to the position of Resident in Psychiatry, beginning January 1, 1951;
Dr. Morton N. Swartz to the position of Chief Resident in Medicine, effective January 1, 1952;
The following Interns to the rank of Assistant Residents:
  Dr. Cronkhite
  Dr. Field
  Dr. Ford
  Dr. Haut
  Dr. Isselbacher
  Dr. Laster
  Dr. Rukes
  Dr. Wood
The following Assistant Residents to Residents, as of January 1, 1951:
  Dr. Ehrenkranz
  Dr. Gottschalk
  Dr. Owen
  Dr. St. Goar

The General Executive Committee also voted to appoint:

Dr. Consuelo O. Aguirre as Graduate Student Assistant, assigned to the Children's Medical Service, as of October 1;
Dr. Robert V. Coxon as Research Fellow in Medicine, effective October 18;
Dr. Donald Gribetz as Clinical and Research Fellow on the Children's Medical Service, as of October 1;
Dr. Mary Yun-Chen Kao as Graduate Student Assistant, assigned to the Children's Medical Service, as of October 1;
Dr. George A. McCormack as Clinical and Research Fellow in Surgery, assigned to Gynecology, as of October 1;
Dr. Audley R. Mamby as Clinical and Research Fellow in Medicine, as of October 27;
Dr. Enrique L. Matta, Jr. as Graduate Student Assistant, assigned to the Children's Medical Service, as of October 1;
Mr. John W. Money as Research Fellow in Psychiatry, effective November 1;
Dr. Lu Kwang Shun as Graduate Student Assistant in Surgery, as of October 3;
Dr. Svein L. Sveinsson as Clinical and Research Fellow on the Children's Medical Service, as of October 1;
Dr. Henrik O. Tonning as Clinical and Research Fellow in Medicine, effective November 1.

STAFF PUBLICATIONS

A new procedure regarding the publication of titles of articles and books written by members of the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary staffs went into effect with the July — August issue of THE NEWS. Each month, titles of new publications will appear in THE NEWS. If you have not already done so, please send all titles of books and articles you have published since (and including) January 1, 1950, to Cora F. Holbrook, Editor of THE NEWS, and continue to send her all new titles each month.

As soon as the December titles have appeared in the January 1951 issue of THE NEWS, the lists will be assembled and published as the Massachusetts General Hospital—Massachusetts Eye and Ear Infirmary Publications for the calendar year 1950. Should you fail to report a title to THE NEWS, it will not appear in the assembled list.

Be sure to include complete data: 1) classification of material, such as Anesthesia, General Medicine, Laboratory Science, General Orthopedics, Orthopedic Surgery, Miscellaneous; 2) title of article; 3) title of publication in which it appears, together with the volume number and page numbers. For books, give the publisher's name and address.

Please pay special attention to 1), above. Several of the reports already received did not include classifications of material. In such instances where the titles failed to make the classifications obvious, much time had to be spent on examining the material or procuring this information from the authors.

The deadline date for each issue of THE NEWS is the 12th of the preceding month.

All requests for reprints are to go directly to the individual authors, and *not* to Treadwell Library nor to THE NEWS.

The following titles have been submitted, in addition to the 136 already published in THE NEWS:

Cardiology

Cohen, M. E., and White, P. D.
  Life situations, emotions and neurocirculatory asthenia (anxiety neurosis, neurasthenia, effort syndrome).
    A. Research Nerv. & Ment. Dis., Proc. 29: 832-869.

Craige, E., Alimurung, M. M., Bland, E. F., and Massell, B. F.
  The Q-T interval in rheumatic fever.
    Circulation 1:1338-1344.

Gertler, M. M., and Garn, S. M.
  Lipid interrelationship in health and in coronary artery disease.
    Science 112:14-16.

Gertler, M. M., Garn, S. M., and Bland, E. F.
  Age, serum cholesterol and coronary artery disease.
    Circulation 2:517-522.

No. 29 in a series of Staff photographs
Dr. Joseph C. Aub—Physician—Director, Medical Laboratories,
Collis P. Huntington Memorial Hospital of Harvard University

Gertler, M. M., Garn, S. M., and Lerman, J.
The interrelationships of serum cholesterol, cholesterol esters and phospholipids in health and in coronary artery disease.
Circulation 2:205-214.

Littmann, D., and Schaaf, R. S.
Therapeutic experiences with subacute bacterial endocarditis.
New England J. Med. 243:248-252.

Loofbourow, D., and Palmer, R. S.
Medical progress: Hypertension.
New England J. Med. 243:257-265; 295-307.

Messer, A. L., Hurst, J. W., Rappaport, M. B., and Sprague, H. B.
A study of the venous pulse in tricuspid valve disease.
Circulation 1:388-393.

Palmer, R. S.
Psyche and blood pressure.
J. A. M. A. 144: 295-298.

Rogers, H. M., Domeier, L. H., Brigham, F. G., and White, P. D.
Tricuspid stenosis with survival to the age of 61 years.
Am. Heart J. 39:761-767.

Schaaf, R. S., with the editorial assistance of E. F. Bland.
Cardiovascular diseases: Review of significant publications, July 1947 to June 1949.
Arch. Int. Med. 86:87-160.

Sprague, H. B., and Carmichael, D. B., Jr.
Rheumatic valvular disease in the aged.
Geriatrics 5:239-251.

White, J. C., and Bland, E. F.
Controle des tachycardies paroxystiques rebelles par sympathectomie (a propos de 7 observations).
Lyon chir. 45:395-402.

White, P. D.
Coronary thrombosis.
Scient. Am. 182:44-46, June.

White, P. D.
Facts and fancies about the heart, Part I.
Life & Health 65:6-7; 23.

White, P. D.
First world heart congress meets in Paris.
Am. Heart 1:5, Oct.-Dec.

White, P. D.
Historic delays in the application of knowledge about the heart.
J. M. A. Alabama 20:65-75.

White, P. D.
La médecine du coeur.
Diplomate 22:9-16.

White, P. D., Dimond, E. G., and Williams, A.
Follow-up study of one hundred private hypertensive patients with cardiovascular complications.
J. A. M. A. 143:1311-1317.

White, P. D., Hurst, J. W., and Fennell, R. H.
Survival to the age of seventy-five years with congenital pulmonary stenosis and patent foramen ovale.
Circulation 2:558-564.

General Medicine

Massell, B. F., Warren, J. E., and Sturgis, G. P.
Observations on the effects of ACTH in patients with rheumatic fever and rheumatic carditis.
In Proceedings of the First Clinical ACTH Conference, Philadelphia, Blakiston Co., pp. 405-418.

Sturgis, G. P.
The role of the Massachusetts Heart Association in the problem of subacute bacterial endocarditis.
New England Dent. J. 3:29-30.

Gynecology and Obstetrics

Meigs, J. V.
Enterocele.
In Progress in Gynecology, vol. II, J. V. Meigs and S. H. Sturgis, Editors, New York, Grune & Stratton, pp. 698-701.

Meigs, J. V.
Radical hysterectomy for cancer of the cervix with bilateral pelvic lymphadenectomy (the so-called Wertheim operation).
In Progress in Gynecology, vol. II, J. V. Meigs and S. H. Sturgis, Editors, New York, Grune & Stratton, pp. 540-560.

Neurology, Neurosurgery, and Psychiatry

Selverstone, B., and White, J. C.
Surgical treatment of the pain of pelvic disease.
In Progress in Gynecology, vol. II, J. V. Meigs and S. H. Sturgis, Editors, New York, Grune & Stratton, pp. 748-761.

Steinberg, D., and Selverstone, B.
Radioautography of cerebral tumors employing P^{32}.
Proc. Soc. Exper. Biol. & Med. 74:304-308.

White, J. C., Bidwell, R. LeR., and Kubik, C. S.
Meningioma of record size with unusual features.
J. Neurosurg. 7:455-460.

Ophthalmology

Copeland, R. L., and Kinsey, V. E.
Determination of volume of the posterior chamber of the rabbit's eye.
Arch. Ophth. 44:515-516.

Kinsey, V. E.
Physiologic chemistry of the eye: A review of papers published during 1949.
Arch. Ophth. 44:584-599.

Oto-Laryngology

Kelemen, G.
Colesteatoma del atico de origen traumatico.
Bol. Liga contra el cáncer 25:31-36.

Kelemen, G.
Nasal cavity of the guinea pig in experimental work.
Arch. Otolaryng. 52:579-596.

Physical Medicine

Watkins, A. L.
Boundaries of Physical Medicine.
Arch. Phys. Med. 31:623-628.

Miscellaneous

Sleeper, R.
Nursing care throughout fifty years.
Am. J. Nursing 50:586-589.

Books

Meigs, J. V., and Sturgis, S. H. (Editors)
Progress in Gynecology, vol. II.
New York, Grune & Stratton.

Brief bits:—

Dr. Robinson LeR. Bidwell (*ES* 1943) is practising neurosurgery at 203 State St., Portland, Maine.

We received a card which says on one side: "Introducing our new regional agent, Miss Locksley Anne Gardner, representing Locksley & Lytt Gardner enterprises, Ltd., 1752 Aberdeen Road, Towson 4, Md. See over for details." Elucidation being quite necessary at that point, we did "see over", and found: "Born 14 Oct. 1950, Johns Hopkins Hospital. Weight 8 lb. 3 oz."

Dr. Robert R. Linton (*WS* 1928), Visiting Surgeon on our staff, was the guest speaker at the scientific assembly of the 100th Annual Session of the Medical Society of the State of Pennsylvania, held in Philadelphia on October 16, and was also guest speaker at the Hecktoen Institute for Medical Research, in Chicago, on November 2.

THE NEWS

No. 97 Boston, Mass. January 1951

THE BRAIN WAVE LABORATORY

This laboratory celebrates its 14th birthday in March of this year. When it was opened in 1937, the two-channel Grass unit was housed in a ventilating hood of the abandoned kitchen on the first floor of the Bulfinch Building. The storage batteries hung by block and tackle over the secretary's desk, and the patient lay in a screened box by the side of a dumbwaiter door. An antique X-ray fluoroscope in another building produced such a torrent of aerial interference that operation could be done only during the noon hour or after 4:30 in the afternoon. It took a month or so to locate the source of the offending broadcast. The Maintenance Department at first was reluctant to make the necessary changes in the X-ray equipment to eliminate the interference. The Federal Communications Bureau came to our aid with a threat to compel the X-ray Department either to take out a commercial radio station license, with at least one news broadcast and a time signal a day, or alter their equipment and get off the air. The electroencephalographer spent as much time wandering about the hospital trying to persuade his colleagues to send their patients for the examination as he did in taking the actual tracings. Many patients refused to have the test on first sight of the apparatus which they felt sure was a shocking-machine, while others insisted their symptoms were disappearing, from a new type of electrical therapy which could not only read their thoughts but convert them into wiggly lines on a 2-inch paper strip.

Today the laboratory on the fourth floor of the same building, in efficient quarters (crowded, to be sure), performs each day a routine load of work for the hospital in the same way as does the X-ray Department. Patients from all divisions of the hospital come and go with a nonchalance one meets in the barber shop. There are now two 8-channel new Grass units and a 6-channel modernized one; a Walter automatic wave analyzer; and auxiliary equipment—such as cathode ray, stroboscope, tremor recorders, ergograph, etc. The records now appear in book form, 8 inches wide, and, after interpretation, they are entirely microfilmed for storage purposes. The records are entered on regular forms with the interpretations typed upon them, and carbon duplicates on punch cards remain in the laboratory for referral and investigation. A preliminary description by the technician is made at the time of the test and is immediately placed in the hospital record for the convenience and interest of the referring physician. A telephone call can bring one of the 8-channel machines to any part of the hospital for an emergency examination, or into the operating room to record the activity from an exposed brain. The routine examinations will run a bit over 3,000 in 1950—a ten-fold increase from the first full year of 1938. In the early days, from four to eight electrode placements were in general use in each examination. Now the minimum is nine, and many localization studies involve as many as twenty-four.

For ten years, we were limited to the scalp surface for the recording of the brain potentials. In 1948, MacLean, who worked in the laboratory for a year, devised a practical electrode that could be inserted easily, without local anesthesia, into the nasopharynx through the nose. One in each nares constitutes an efficient basal pair of recording electrodes. In the same year, Arellano of Lima, Peru, working with us on a Public Health Fellowship, produced a silver-tubular electrode that could be inserted into the external auditory canal and rest against the eardrum. Its position under the temporal lobe gave further scope to recording from the base of the brain. In the early days of electroencephalography, voluntary overbreathing was all that we had to bring out the latent abnormalities in the electrical pattern. Sargant of London, in his year with us, thoroughly explored this type of "activation", as it is called. He used a synchronized BMR machine to record the liters of air breathed per minute at rest and during voluntary and involuntary hyperpnea. He showed, for example, that patients with petit mal when at ease and relaxed, breathing at 4 to 5 liters per minute, might be seizure-free, but if emotionally disturbed breathed at 9 to 10 liters a minute, which produced a number of the minor seizures so characteristically shown on the brain wave record. During such seizures, Schwab showed that the reaction time to a bright neon light or a loud boat whistle (two of the examining rooms are equipped with both such electrically operated stimuli) was greatly prolonged or even absent. Brazier, who joined the staff of the laboratory in 1940 and has remained with us, has investigated the effects of low blood sugar, anoxia, sleep, and barbiturates on the electroencephalograms in a substantial group of normals—including air corps cadets. Her findings have led to a close collaboration with the Department of Anesthesia, under Dr. Beecher, in important specialized studies involving animals as well as humans. These are now being developed and expanded in that department.

In October 1949, Professor Henri Gastaut of Marseille, a leading French electroencephalographer, spent 10 days with us. He introduced the combined stroboscopic-metrazol technique of activating the electroencephalogram. Following his stimulating visit, this method of bringing out short myoclonic epileptic discharges in the brain wave record, as well as their brief clinical components, has been in regular use. It is particularly valuable in differentiating the idiopathic epileptic from the patient with automatisms. Many records which were either borderline or nonspecific under the usual recording technique showed by this procedure clear-cut seizure patterns.

Abbott, who joined our group in 1938, has organized and supervised the epileptic clinic and followed such patients under the new anti-epileptic drugs with electroencephalographic studies. Routine localization of brain tumors as a part of the neurological and neurosurgical examination has been a fruitful application of electroencephalography. Abbott has contributed much toward introducing better accuracy to such examinations—particularly in the group of subdural hematomata.

The staff of the laboratory has been active in the organization and activities of local, national, and international electroencephalographic endeavors. Abbott has been President of the Eastern Association of Electroencephalographers and is now Secretary of the American EEG Society. Brazier has been Treasurer of this national society since its inception in 1948 and is an editor of the EEG Journal. Schwab is now President of the American EEG Society and Managing Editor of the Journal, the U.S.A. office of which is on the same floor as the laboratory. He is also one of the vice presidents of the International EEG Federation, and Secretary for the Third International EEG Congress, which will convene at our hospital in August 1953.

The head technician of the laboratory is Miss Gray, who started with us as a part-time assistant in 1937. Miss Delaney is the laboratory secretary. Miss Bowker, Miss Galvin, and Miss Peterson are technicians, and Mr. Eckert and Mr. Miller are the electronic engineers. Mr. Bonazzi is in his second year of Veterans-Administration-sponsored training. Miss Garvey is our file clerk, and Miss Garrison the nurse.

There is a sort of EEG Laboratory metastasis at the McLean Hospital, where they have a 6-channel Grass machine which is run and maintained by our staff, and the records are interpreted by one of us.

From the start of the laboratory, elec-

REMOVE THESE EDGES FIRST
FOLD, CREASE AND TEAR ALONG PERFORATION

tromyograms have been done on the apparatus. This has led to close cooperation with Dr. Watkins's Department of Physical Medicine. At the present time, we share with him a new Meditron Cathode Ray oscillograph with a built-in steel tape recorder. This enables a record of the muscle action potentials to be stored either temporarily or permanently on the metal tape, plus any vocal comments or even clinical speech studies. At any time, the electromyogram on the tape may be played back into the loud-speaker and cathode ray screen. This can be used for teaching purposes or comparative clinical studies. Usually, a photograph of the original cathode ray tracings is obtained during the examination of the patient; but if, for any reason, the tracings are not satisfactory, a repeat picture—days or years later—can be easily procured from the steel tape record by the play-back. DeLorme, of the Department of Physical Medicine, has been most active in collaborating with us in electromyography and in the application of his progressive resistance exercise to some of our problems.

Since 1947, we have been actively investigating various new drugs in the alleviation of the symptoms of Parkinson's disease. This involves not only the use of the electromyogram, but also a number of laboratory and strength tests performed here. Grants-in-aid from the Geigy Co., Hoffmann-LaRoche Co., Lederle Laboratories, Searle Co., and Warner Drug Co. have enabled us to devote the necessary time, apparatus, and personnel to this clinical study. Leigh of London worked with us on this project in 1948, Tillman of Ontario in 1949, and Prichard of London in 1950. In November and December of 1950, Henry Barcroft of London arranged his American tour so that he might spend several weeks with us in a special study of the intravenous effect of adrenalin and noradrenalin on the tremor in patients with Parkinson's disease.

We have a project sponsored by the Office of Naval Research on Fatigue which involves the use of the Walter analyzer of the EEG, as well as electromyograms and ergographic studies.

We have helped examine and test apparatus for the A.M.A., and will be available for the examination of candidates for certification in Electroencephalography. A number of physicians and technicians have received their training here in the past fourteen years.

Both Brazier and Schwab have written books which will appear early this year. Brazier's is on Neurophysiology, and Schwab's on Clinical Electroencephalography.

The goal of such a laboratory as this is to be fully cooperative, by means of our specialized techniques, with all parts of the hospital in many of the research programs that are in operation. We feel that we have achieved this in a most pleasant manner with the Departments of Anesthesia (Beecher), Medicine (Means), Neurology (Kubik), Neurosurgery (J. C. White), Physical Medicine (Watkins), and Psychiatry (Cobb). The regular clinical cooperation with these and other departments has been most cordial. In closing, therefore, I feel we might well stress the most important factor in our growth and stability—namely, the extraordinary interest and cooperation of the clinical staff of this hospital. In addition, two sympathetic hospital Directors, Dr. Faxon and now Dr. Clark, an alert and efficient Maintenance Division under Kinsman, and the eagle eyes of Greenhood—all have made our life in this hospital pleasant, secure, and successful. Laboratories of this kind in other places do not fare so well, and it is for this reason that we wish to express our appreciation here.

Robert S. Schwab, M.D.,
Associate Neurologist

* * *

A gift of $200,000 to the Massachusetts General Hospital by the Kresge Foundation of Detroit was announced by Mr. Francis C. Gray, Chairman of our Board of Trustees, at the annual dinner of the Corporation and Trustees on December 4.

A letter from Mr. Paul W. Voorhies, President of the Kresge Foundation, said the award was "in recognition of the contributions to medical science being made in the research laboratories of the Massachusetts General Hospital."

Dr. Dean A. Clark said the gift has made it possible to complete the equipment of our new research building. Dr. Clark also spoke of the plans now under way for the construction of another important laboratory building for pathology and bacteriology studies. He said that $400,000 are now available for this proposed building, but that at least another $400,000 would have to be raised to complete it.

* * *

On November 24, the cornerstone of our nearly-finished $2,750,000 research building was laid, with Mr. John R. Macomber wielding the trowel.

The ceremony coincided with the annual meeting of our Scientific Advisory Committee of outside scientists. This committee, which reviews the research programs of M.G.H. and makes recommendations on policy matters to our Board of Trustees, includes two Nobel Prize winners—Dr. Herbert S. Gasser of New York, Director of the Rockefeller Institute, and Dr. Carl F. Cori of Washington University, St. Louis. Other members of the committee are Dr. Robert F. Loeb, Professor of Medicine at Columbia and Chief of Medical Services at Presbyterian Hospital, New York; Dr. Linus Pauling, California Institute of Technology; Dr. James R. Killian, Jr., President of Massachusetts Institute of Technology; and Dr. Lowell J. Reed, Vice President of Johns Hopkins University.

Other guests at the ceremony included members of our Board of Trustees and of the hospital staff.

* * *

As was to be expected, M.G.H. again went over the top in the 1950 Community Fund Drive. Our quota this year was $14,600. A total of $17,635.56 was contributed—121% of our goal.

* * *

WALTER WALKER PALMER

On October twenty-eighth last, at his farm in the Berkshires, died Walter Walker Palmer, East Medical 1911 and first Medical Resident, or "House Physician", as it was called in those days of 1915, of the Massachusetts General Hospital. Palmer, who was born in Southfield, Massachusetts in 1882, had graduated from Amherst College in 1905 and from the Harvard Medical School in 1910. He was the pupil of David L. Edsall and of Lawrence J. Henderson, and in the footsteps of these masters he rose to prominence in American medicine.

The writer, who followed him by one year in the Harvard Medical School, overlapped him in the internship. Those were the days of the old progressive or vertical house staff curriculum. The medical service consisted of four periods of four months each—subpup, pup, junior, and senior. The writer was subpup when Palmer was East Medical Senior. He also was Palmer's patient during a pneumonia of some sort in the period of his subpupship. Well does he remember the stimulating effect of the cheer and wit of Palmer's morning visits.

Between his internship and residency Palmer was the Henry P. Walcott Fellow. This fellowship, given by Dr. Frederick Cheever Shattuck, was designed to start young men of promise on investigative careers in medicine.

Palmer, who originally intended to go into private practice, had biochemical leanings and, in consequence, early came under the sway of Henderson. In order that he might work with Henderson, Edsall bestowed the Walcott Fellowship upon him. With Henderson, Palmer made pioneer studies on the factors which control the hydrogen ion concentration of the urine, and of the excretion of acid and base by the kidneys.

In 1915 he became Assistant in Medicine at the Rockefeller Institute, and from 1917 to 1919 he was Associate Professor of Medicine at Columbia and Acting Director of the Medical Service of the Presbyterian Hospital, New York. In 1919 he moved to Johns Hopkins as Associate Professor and Associate Visiting Physician to the Johns Hopkins Hospital, under the leadership of Dr. William Sidney Thayer (*WM* 1889). In 1921 he returned to Columbia as Bard Professor of Medicine and Director of the Medical Services of the Presbyterian Hospital, in which positions he continued until his retirement in 1947.

Retirement for Palmer did not mean the stopping of work. The City of New York, recognizing his ability, seized upon him to become Director of its Public Health Research Institute—an independent research laboratory supported in part by the city and in part by private gifts. The Institute conducts a broad program of fundamental medical research. It was a perfect job for Palmer to take up following his retirement from Columbia.

Throughout his career Palmer was a full-time man in medicine—a teacher and investigator. He was one of the pioneers in this type of clinical work and lived up to his early promise. He was honored with a Doctor of Science degree from Amherst in 1922, from Columbia in 1929, and from Princeton in 1949.

In his death the Massachusetts General Hospital loses a distinguished alumnus, and the country a valued medical leader. To his wife and three children who survive him his friends at the M.G.H. extend deep sympathy.

J. H. M.

The Board of Trustees, at their meetings on November 17 and December 1, voted to appoint:

Dr. Leonard Atkins as Second Assistant Resident in Pathology for one year, beginning July 1;

Dr. Effie O. Ellis as Intern on the Children's Medical Service from April 1 to June 30, and as Assistant Resident on the Children's Medical Service from July 1, 1951 to June 30, 1952;

Dr. Hanna Klaus as Second Assistant Resident in Pathology for one year, beginning July 1;

Dr. Leon Reznick as Assistant Resident in Dermatology for one year, beginning July 1;

Dr. George M. Walker as First Assistant Resident on the Surgical Service, beginning January 1.

At their meetings on November 8, 15, 22, and 29, the General Executive Committee voted to promote:

Dr. George L. Nardi from First Assistant Resident in Surgery to the rank of Resident in Surgery, as of January 1;

Dr. William A. Thomas from First Assistant Resident to Resident in Pathology for the period beginning July 1;

Dr. William R. Waddell from First Assistant Resident in Surgery to the rank of Resident in Surgery, as of January 1.

The General Executive Committee voted to promote the following members of the Surgical Resident Staff, effective as of November 1, 1950:

Dr. Benjamin A. Barnes from Third Assistant Resident to Second Assistant Resident;

Dr. James M. Davis from Second Assistant Resident to First Assistant Resident;

Dr. Hermes C. Grillo from Second Assistant Resident to First Assistant Resident;

Dr. Robert W. Hopkins from Second Assistant Resident to First Assistant Resident;

Dr. J. Roger Newstedt from First Assistant Resident to Resident;

Dr. Talmage W. Nielsen from Third Assistant Resident to Second Assistant Resident;

Dr. Paul S. Russell from Third Assistant Resident to Second Assistant Resident;

Dr. Weldon W. West from Second Assistant Resident to First Assistant Resident;

Dr. Roger E. Wilcox from Third Assistant Resident to Second Assistant Resident.

The General Executive Committee voted to appoint:

Dr. Sedad H. Atikkan as Clinical Fellow in Surgery, assigned to Endoscopy, for the period of November 1, 1950 to February 7, 1951;

Dr. Lincoln D. Clark as Clinical and Research Fellow in Psychiatry, assigned to Anesthesia, beginning January 1;

Dr. Louise S. Clark as Clinical and Research Fellow in Anesthesia for one year, beginning January 1;

Dr. Brigitte Ewert as Clinical Fellow to the Children's Medical Service, effective as of November 8, 1950;

Dr. Real A. Gelinas as Clinical Fellow in Surgery, assigned to Endoscopy, for the period of December 1, 1950 through March 31, 1951;

Dr. Marianne Rademaker as Clinical Fellow in Anesthesia for one year, beginning December 1, 1950;

Dr. Gustavo R. Serrano as Clinical Fellow in Surgery, assigned to Endoscopy, beginning January 1;

Dr. Thorkild Waino-Andersen as Fellow in Anesthesia for one year, beginning March 1;

Dr. Frank A. Warner as Clinical Assistant in Medicine.

The General Executive Committee also voted that Dr. Boris Senior's title be changed to that of Clinical and Research Fellow to the Children's Medical Service, as of September 28, 1950.

* * *

In Richmond over the week end of November 4, my host and hostess, Dr. and Mrs. William Branch Porter, did for me one of the pleasantest things in my experience.

On the Saturday afternoon I was with them, they were obliged to absent themselves for some hours at a wedding. I was planning to relax comfortably in their delightful house during this time, but they had other ideas. I found that they had arranged for me to give a cocktail party in their house to all the MGH medical alumni in Richmond. It was a very delightful thing to have these graduates come to me in that lovely house and in such an intimate manner. The following were present:

Basil B. Jones, East Medical 1918 and Children's Medical 1919

William R. Jordan, West Medical 1930

Morton M. Pinckney, West Medical 1932

William T. Thompson, Assistant Resident Physician 1941

Adney K. Sutphin, West Medical 1943 and Assistant Resident in Medicine 1946

George W. James, III, Medicine 1944

There were also present Reno R. Porter, who was a Cardiac Fellow in 1939, and Paul D. Camp, also a Cardiac Fellow here in 1930. The one absent member was Stuart Ragland, Jr. He could not attend, being here at M.G.H. on the job as Intern on the Medical Services.

It seemed to me a very auspicious gathering, and I suggested that those present form themselves into the MGH Club of Richmond, which they did enthusiastically, and elected Mike Pinckney as Permanent Secretary. It is now up to Mike to see that this society, so favorably founded, continues to live. It must have at least annual meetings, and it may have as many more as it likes.

It seemed to me that our readers would be interested in this bit of MGH history, and I am sure all will wish the MGH Club of Richmond the best of luck.

J. H. M.

Voluntary contributions of material for THE NEWS are always particularly appreciated. Such a contribution came recently from the OPD nurses, who say they will continue to send us information concerning their department. Here are their notes for this month:

On November 21, Dr. Irad B. Hardy, Jr. (*ES* 1939), Assistant in Surgery on our staff, was guest speaker at the Graduate Nurses' meeting. He showed slides and spoke on "Aortic aneurysms". This was the first of a series of talks to be given by staff members.

On December 14, Dr. Arthur S. Spangler (*r.p. D* 1945), Assistant in Dermatology on our staff, who had charge of a leper colony in the South Pacific while he was in the Navy during World War II, showed pictures and spoke on his experiences as a dermatologist in the tropics.

Brief bits:—

The first try-out of the atomic disaster plan of the Massachusetts General Hospital took place on November 19. Volunteers, acting as patients, were evacuated from M.G.H. and conveyed to emergency wards at McLean Hospital. Several hundred doctors, nurses, nurses' aides, transportation volunteers, Boston and Belmont police, auxiliary police, and civilian defense officials took part in the rehearsal—one of the first of its kind to be held in the country.

In response to a call from the Surgeon General of the Army, Dr. Henry K. Beecher, Chief of our Anesthesia Service, left suddenly for Korea on November 20, to be gone about a month. We hope to give you a report of his trip in the next issue.

Dr. Ronald C. Bishop (*M* 1945) began service as Instructor of Medicine at the University of Michigan on January 1. His new address is 2672 Maplewood Ave., East Ann Arbor, Mich.

Dr. Edward D. Churchill, Chief of our Surgical Services, was guest lecturer at the North Pacific Surgical Association, Tacoma, Washington, on November 17 and 18. His subjects were "Carcinoma of the lung" and "Cervicothoracic surgical problems". Dr. Churchill was made an Honorary Member of the Association.

Dr. Ernest M. Daland, Visiting Surgeon at M.G.H., was named President of the Massachusetts Division of the American Cancer Society at a meeting of the Directors on November 15.

Through the generosity of the late Mrs. James B. Noyes and in memory of her great-grandfather, Rev. John Bartlett, whose interest in the mentally ill contributed toward the establishment of the McLean Hospital, the organ in the Samuel Eliot Memorial Chapel has been modernized. The organ will be heard frequently in recitals for the patients, and each Sunday afternoon for church services.

The MGH-Harvard Burn Study Group was represented at the National Research Council Burns Symposium, November 2 to 4, by Drs. Oliver Cope, Bradford Cannon, John Raker, and Ann Wight. Dr. Cope presented a paper on "Fluid and electrolyte requirements in burns".

New addresses:—

Dr. Terry E. Lilly, Jr. (*ES* 1943), 5714 McGee St., Kansas City 2, Mo.

Lt. Samuel M. McCann, MC, USAR (*M* 1950), Army Medical Service Graduate School, Washington, D. C.

Dr. Alexander G. Matoltsy (*res. fel. D*), 34 Cushing Ave., Belmont, Mass.

Lt. Edgar J. Schoen, MC, USNR (*CM* 1950), BOQA-1, Room 107, Naval Training Station, Newport, R. I.

Dr. Alfred Yankauer (*CM* 1941), 44 Marshall St., Rochester 9, N. Y.

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. V. Everett Kinsey, member of the staff of the Howe Laboratory of Ophthalmology at the Infirmary and Assistant Professor in Ophthalmic Research at the Harvard Medical School, has left as of December 1 for Detroit, Michigan. Dr. Kinsey has been appointed to the staff of the Kresge Eye Institute and is Professor of Ophthalmic Chemistry at Wayne University Medical School.

Dr. Kinsey came to the Howe Laboratory in 1940 from the University of Pittsburg School of Medicine, where he had been a research fellow in Ophthalmology. His work at the Infirmary has been primarily connected with the physiology and biochemistry of the eye, particularly in regard to the intra-ocular fluids and their relation to glaucoma.

During the war, Dr. Kinsey and his associates carried on research with war gases, under the auspices of the Office for Scientific Research and Development. A contract for atomic research was given Dr. Kinsey in 1950 by the Atomic Energy Commission, in recognition of his work with radiation and tracer elements.

In 1944 Dr. Kinsey was co-winner with Dr. David G. Cogan, Director of the Howe Laboratory, of the Warren Triennial Prize for research on the physiology of the cornea. Dr. Kinsey published a total of 50 papers on his work in the field of biochemistry and physiology of the eye while at the Howe Laboratory.

In 1947 Dr. Kinsey became director of the retrolental fibroplasia project which had previously been started under the direction of the late Dr. Theodore L. Terry. The project combined laboratory research on blindness in premature infants with an active clinical program.

The clinical examination of all premature babies weighing less than 4 pounds, born at the Boston Lying-in Hospital, was conducted by Dr. Merrill J. King and Dr. Julian F. Chisholm, Jr. of the Infirmary staff. This clinical program was to observe the course of the disease in the infants, arresting it when possible and preventing secondary complications. The latest studies in retrolental fibroplasia, published in 1949 by Dr. Kinsey and Dr. Leona Zacharias, attempted to make a correlation between geographical incidence and treatments used. Some significance was attached to the use of vitamin A supplements (water-soluble form) and of iron in these premature children. Both Dr. Kinsey and Dr. Zacharias felt that a metabolic disease was primarily the cause of retrolental fibroplasia.

Dr. Kinsey will continue in an advisory capacity for the project, which will be maintained at the Infirmary under the support of the Foundation for Vision.

At a meeting of the Executive Committee held September 25, it was voted:

> To change the titles of Senior Clinical Assistant and Clinical Assistant in Ophthalmology and Clinical Assistant in Oto-Laryngology to Assistant in Ophthalmology and Assistant in Oto-Laryngology.

The title of Clinical Assistant will no longer be used.

A plan for the reorganization of the Oto-Laryngological Service of the Out-Patient Department has recently been inaugurated. The plan calls for an all-year-round service for the staff below the rank of Associate Surgeon. Each staff member is assigned to one day a week in the Out-Patient Department, and may also serve one day a week in the operating room if he so chooses.

Dr. Endre Balazs of Budapest arrived December 1 from Sweden to begin his work for the Infirmary Retina Service and the Retina Foundation, where he will serve for three years. Dr. Balazs received his M.D. from the Medical Faculty of the University of Budapest, where he later was appointed Assistant Professor at the Institute for Pharmacology. Since 1948 he has been a research fellow in the Wenner-Gren Foundation in Stockholm.

Two distinguished visitors from different parts of the globe have been observing at the Infirmary during the past two weeks. Dr. Mahomed Mortagy of Cairo, Egypt, was sent to the U.S. by the Egyptian Minister of Education, to study techniques of the separated retina operation. His travels have taken him across the country from San Francisco to the east coast.

Dr. P. G. Gerlings, well-known Oto-Laryngologist and organizer of the *International manual of Oto-Laryngology*, from Amsterdam, Holland, stopped in Boston on his return from a six-weeks' tour of the U.S. to observe in the operating rooms and clinics of the Infirmary. He was particularly interested in Dr. Moses H. Lurie's histological collection of experimental physiology of hearing.

Dr. LeRoy A. Schall, Chief of the Ear, Nose and Throat Service, and Dr. Philip E. Meltzer, Surgeon-in-Charge of the Winthrop Foundation, were visitors at the University of Iowa, November 28 and 29, where they gave lectures—Dr. Meltzer on "Fenestration" and Dr. Schall on "Cancer of the larynx".

Dr. Warren D. Haley, who recently completed his residency, has been appointed Assistant on the Ophthalmological staff.

Dr. Herbert J. Dietrich, Resident in Oto-Laryngology, finished his service at the Infirmary on January 1. He will remain for three months at his home in Philadelphia and will then leave for Europe to continue his studies.

The regular Alumni Luncheon was held in the Ear, Nose and Throat Clinic on November 15. Dr. Edgar M. Holmes was in charge of arrangements. A total of 55 alumni were on hand for the two-day meetings—some from as far away as Mississippi and Georgia.

Two nurses from the Royal Victoria Hospital in Montreal visited the Infirmary in December. Miss Elizabeth O'Neill of Montreal and Miss Patricia Scanlon of London were particularly interested in the operating room set-up and ward nursing.

A letter from Lt. John J. Shea, recently called into military service, came from the U.S. Army Hospital at Camp Breckinridge, Kentucky. Lieutenant Shea is one of several Navy doctors called into service and transferred to the Army. He states that he is the Chief of the Ear, Nose and Throat Service, in charge of a 22-bed ward and an active clinic. He and his wife and young daughter are living in nearby Evansville, Indiana.

STAFF PUBLICATIONS

It now seems reasonable to believe that all members of the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary staffs know that titles of new publications by staff members of both institutions appear each month in The News. Therefore, we are assuming that from now on it will not be necessary to include a detailed explanation of the procedure each month.

We have said in each issue of The News since the new plan went into effect last summer, that as soon as the December titles have appeared in the January 1951 issue, the opportunity to report 1950 titles will be closed and the lists as they have appeared in The News will be assembled and published as the Massachusetts General Hospital—Massachusetts Eye and Ear Infirmary Publications for 1950. However, since articles or books may have appeared between our December 12 deadline for this issue and the end of 1950, such titles must of necessity be included in our February number. Therefore, titles of late December publications will appear under 1950 in the February issue, followed by the first installment of the 1951 list.

Since it is necessary to make this arrangement for the late December publications, staff members may avail themselves of this *one last chance* to report any 1950 titles they have neglected to send in. Several titles already submitted after December 12 will appear in the February issue.

The convenience of learning of current titles through monthly listings in The News has elicited general acclaim. Please continue to send your titles promptly to Cora F. Holbrook, Editor of THE NEWS, together with 1) classification of material, 2) title of article, 3) title of publication in which it appears, together with the volume number and page numbers. For books, give the publisher's name and address.

The deadline date for each issue of THE NEWS is the 12th of the preceding month.

All requests for reprints are to go directly to the individual authors, and *not* to Treadwell Library nor to THE NEWS.

The following titles have been submitted, in addition to the 170 already published in THE NEWS:

Cardiology

Cohen, M. E.
Studies of palmar hand sweat in healthy subjects and in patients with neurocirculatory asthenia (anxiety neurosis, neurasthenia, effort syndrome) with a description of a simple quantitative method.
Am. J. M. Sc. 220:496-507.

Dentistry

Thoma, K. H.
Diagnosis and treatment of odontogenic and fissural cysts.
Oral Surg., Oral Med., & Oral Path. 3:961-986.

Thoma, K. H.
The diagnosis and treatment of salivary cysts and stones.
Oral Surg., Oral Med., & Oral Path. 3:1087-1095.

Thoma, K. H., and Holland, D. J.
Peripheral osteotomy with tantalum gauze inserts for large mandibular tumors.
Oral Surg., Oral Med., & Oral Path. 3:830-842.

Dermatology

Swartz, J. H.
The infectious diseases: Fungous diseases.
In Therapeutics in Internal Medicine, Franklin A. Kyser, Editor, New York, Thomas Nelson & Sons, pp. 130-143.

General Surgery

Moore, F.D., Peete, W. P. J., Richardson, J. E., Erskine, J. M., Brooks, J. R., and Rogers, H.
The effect of definitive surgery on duodenal ulcer disease: A comparative study of surgical and non-surgical management in 997 cases.
Ann. Surg. 132:652-680.

Laboratory Science

McDermott, W. V., Fry, E. G., Brobeck, J. R., and Long, C. N. H.
Mechanism of control of adrenocorticotrophic hormone.
Yale J. Biol. & Med. 23:52-66.

McDermott, W. V., Fry, E. G., Brobeck, J. R., and Long, C. N. H.
Release of adrenocorticotrophic hormone by direct application of epinephrine to pituitary grafts.
Proc. Soc. Exper. Biol. & Med. 73:609-610.

Neurology, Neurosurgery, and Psychiatry

Nemiah, J. C.
Anorexia nervosa: A clinical psychiatric study.
Medicine 29:225-268.

Verzeano, M.
Time-patterns of speech in normal subjects.
J. Speech & Hearing Disorders 15:197-201.

Viets, H. R.
Myasthenia gravis.
In Current therapy, Philadelphia, W. B. Saunders Co., pp. 578-580.

Viets, H. R.
Thymectomy in myasthenia gravis.
Brit. M. J. 1:139-147.

Weisman, A. D.
The doctor-patient relationship: Its role in therapy.
Am. Pract. & Digest Treat. 1:1144-1151.

Orthopedic Surgery

Joplin, R. J.
Sling procedure for correction of splay-foot, metatarsus primus varus, and hallux valgus.
J. Bone & Joint Surg. 32-A:779-785.

Joplin, R. J.
Slipped capital femoral epiphysis.
In American Academy of Orthopedic Surgeons instructional course lectures, vol. 7, Ann Arbor, Mich., J. W. Edwards, pp. 210-217.

Oto-Laryngology

Lineback, M.
Nasal septal hemangiomas: Report of nine cases.
Ann. Otol., Rhin. & Laryng. 59:699-702.

Pediatrics

Bergstrom, W. H., Cook, C. D., Scannell, J., and Berenberg, W.
Situs inversus, bronchiectasis and sinusitis. Report of a family with two cases of Kartagener's triad and two additional cases of bronchiectasis among six siblings.
Pediat. 6:573-580.

Butler, A. M.
Medical progress: Diabetic coma.
New England J. Med. 243:648-659.

Lowe, C. U., Rourke, M., MacLachlan, E., and Butler, A. M.
Use of parenteral potassium therapy in surgical patients: Its role in preventing chloride loss.
Pediat. 6:183-191.

Physical Medicine

DeLorme, T. L., West, F. E., and Shriber, W. J.
Influence of progressive-resistance exercises on knee function following femoral fractures.
J. Bone & Joint Surg. 32-A:910-924.

Urology

Smith, G. G.
The treatment of carcinoma of the prostate.
J. Urol. 64:671-680.

Miscellaneous

Burns, J. H.
A guide to calling on the sick: A pastoral call can be a unique experience if the minister augments his dedication with disciplined methods of working.
Pastoral Psychol. 1:26-30.

Viets, H. R.
Boston Medical Library: Report of the Librarian.
New England J. Med. 242:936-942.

Books

Thoma, K. H.
Oral Pathology, 3d edition.
St. Louis, C. V. Mosby Co.

* * *

ADDITIONAL NOTE FROM DR. P. D. WHITE CONCERNING THE HISTORY OF THE CARDIAC LABORATORY AND CLINICS AT THE M.G.H.

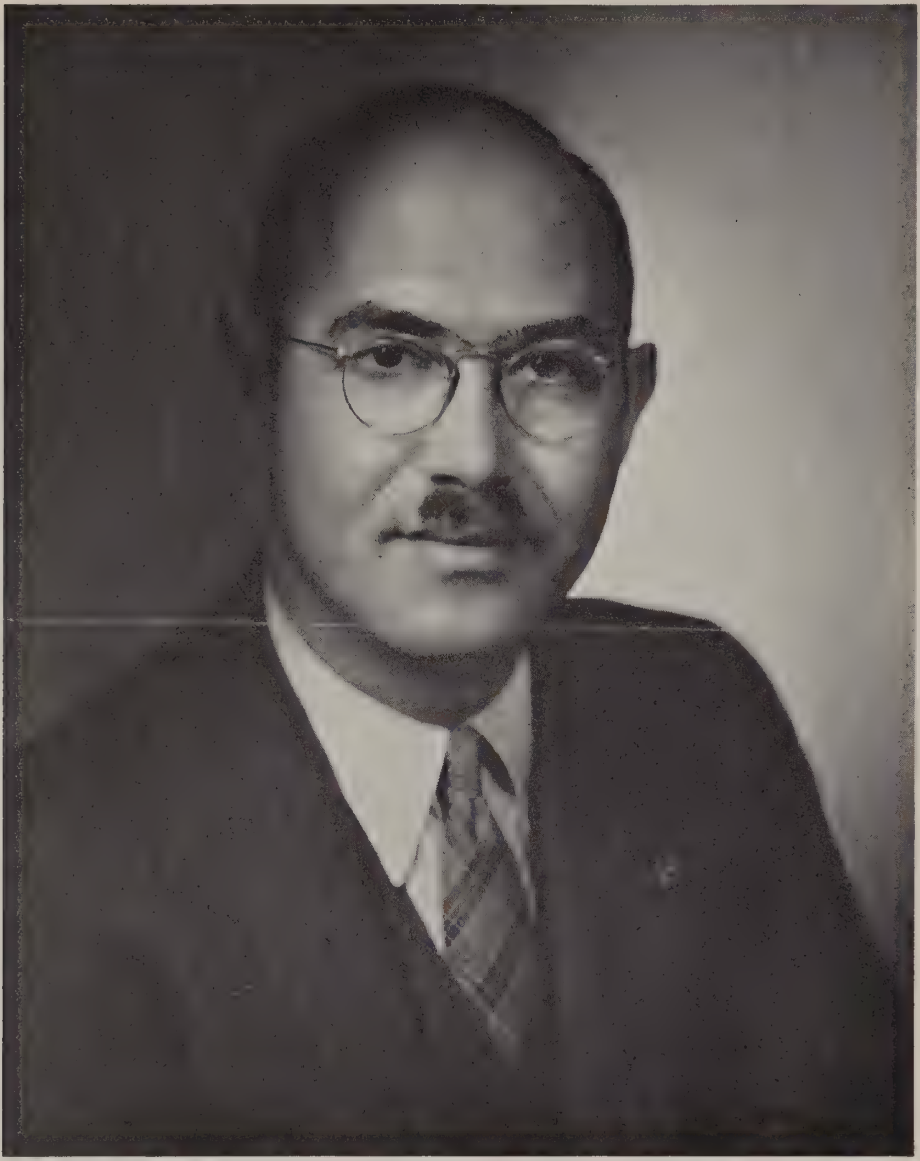
The interesting account of the history of the Cardiac Clinics and Laboratory by Dr. Bland in the November issue of THE NEWS was, it seemed to me, very well done, although I myself would like to give more credit to my many colleagues—in particular, Drs. Sprague and Bland themselves—in the development of the Laboratory and Clinics. There are, however, two or three items that might be added to round out the history more completely. I would refer to my Ether Day Address on the 90th Anniversary of Ether Day in 1936 for other particular details that might happen to interest one or another of the readers of THE NEWS.

It may also be of some interest that it was Dr. Richard Cabot who advised me strongly against specialization in heart disease. Richard Cabot always argued against specialization in any field, even that of letter-writing. On one occasion I had an entertaining platform debate with Dr. Cabot at the Boston School of Social Service — he taking the negative on the subject "Should one specialize in medicine?"

It was Dr. David L. Edsall, at that time the new Chief of Medicine at the Massachusetts General Hospital and Jackson Professor of Medicine at the Harvard Medical School, who inaugurated the special research laboratories (including that on the heart) and helped to foster the special clinics at the hospital. It happened that at the time of my graduation from the West Medical Service of the Massachusetts General Hospital, a patient of Dr. William H. ("Big Bill") Smith — namely, Mr. Francis Skinner—made a donation to the hospital for the purchase of an electrocardiograph. A few days before my graduation as house pupil, Dr. Edsall called me into his office and asked me if I would like to spend a year studying electrocardiography in London, to buy a machine at Cambridge, England, to bring it back with me, and to study it intensively so that I would know how to repair it. That night was a difficult one for decision, because I had all my plans made to enter the field of pediatrics. The chance to work with Mackenzie and Lewis in London, no matter of what use the electrocardiograph might be, and the advice of many friends persuaded me to accept the opportunity offered by Dr. Edsall. However, I would like to add that I did not fully desert the field of pediatrics, for I have continued to be much interested ever since in the health and hearts of children and for many years directed the Children's Heart Clinic in close touch with my many friends and colleagues on the Pediatric Service. I had served as the third house pupil of the new Pediatric Service at the M.G.H.

One might also add, as perhaps the most important fundamental cardiovascular contribution in the early days of the study at M.G.H. (second only to that, pointed out by Dr. Bland, of Richard Cabot's presentation of the fundamental importance of diagnosing the etiology of heart disease—the great value of which he himself did not appreciate at the time) a paper by Merrill M. Myers and me, entitled "Classification of cardiac diagnosis", published in the *Journal of the American Medical Association*, October 1921. This paper was the first to be published anywhere emphasizing the importance of a complete (triple) diagnosis of heart disease — first by etiology, second by structural defects (the old classical plan), and third, following Mackenzie, by its functional condition. Another paper worthy of special comment was that on "The reversibility of heart disease", in the *Illinois Medical Journal* of 1944. (White)

It continues to be an inspiration and joy to be permitted to play a part, even though of much limited scope, in the work of the Cardiac Group at the Massachusetts General Hospital, now under the able leadership of Dr. Edward F. Bland.



No. 30 in a series of Staff photographs
Dr. Robert S. Schwab—Associate Neurologist—Director of the Brain Wave Laboratory

With some reluctance I accede to a request to "say a few words about Korea" for The News. Conditions in Korea have changed so drastically since I left there in early June that comments based on experience before then may be idle. Further, most generalizing statements about Korea—including those made by Koreans—are somewhat suspect, since comprehensive methods of gathering information do not exist there. There are no Gallups or Hoopers in Korea.

Having made these reservations, I will answer quite dogmatically a few of the questions which have been put to me most often since the Korean war began:

What do the South Koreans think of Syngman Rhee? On the whole, he is the most influential man in Korea, due mainly to his long and apparently sincere efforts to achieve independence for his country. However, once in power, he has shown an autocratic streak of his own which has lost him much of his popularity.

How close is South Korea to being a real "democracy"? Not very, by our standards. The National Police, developed under Rhee with our blessing, include many hold-overs from the Japanese era and have little respect for due process of law. Nonetheless, anti-Rhee candidates for the legislature were successful in an election last May, despite a good deal of browbeating by the police. To me, this suggests that the Koreans were making considerable progress politically.

Is there any basic difference between North and South Koreans? Virtually none; somewhat less than there is between northerners and southerners in this country. The 38th parallel is a most unnatural boundary.

Who were happier, before the war—North or South Koreans? A Korean in America made the comment to me that Americans must have entertainment to be happy, but that Koreans are happy if they have enough to eat. By that standard, South Koreans were probably considerably better off. They were able to export some rice to Japan last year (though not without considerable protest against the government for doing it). The great stream of refugees moved from north to south, and few, if any, the other way. Probably both North and South Koreans were happier as they were than under the Japanese.

Do Koreans like Americans? They are almost pathetically proud of their country and really don't like any foreigners, including us—with some reason, for this is not the first time we have been involved in their affairs to their ultimate sorrow. However, relations were excellent while I was in Korea, and since the war began friends have written that South Korean civilians are uniformly friendly and helpful to our army.

What should be done with Korea now? Probably a long-term UN trusteeship should be set up, with a strong occupying force and intelligent and capable administrators, something notably lacking in our previous efforts in Korea. However, the word "trusteeship" should not be used—it is abhorrent to the Koreans and implies to them (through misunderstanding) the prospect of further delay in unifying their unnaturally divided country.

Would you like to go back to Korea? Yes—but not to stay!

Frederick C. Goetz, M.D.,
Resident in Medicine

We are glad to say that we found the little mail box flag with its head raised again during the past month—not raised as erectly as we wished, true enough, but not bowed as it had remained during the previous month.

This brief but interesting letter has come from Dr. William F. Havemeyer (*a.r.s.* 1948), with date line giving Box 308, Willcox, Arizona, as his address.

> I am busily engaged in general practice in Willcox and operate a small hospital—Valley Hospital—in the same town, which gives me abundant facilities for diagnosis and surgery. One does, however, get lonesome for the old haunts!
>
> I was married in New York on December 9. My wife and I are returning to Willcox to live for a year before I return to surgical training.

This is a first letter from Dr. Ferdinand Haase, Jr. (*past a. dir.*) since he left us to become Director of the Nathan Littauer Hospital in Gloversville, N. Y., and all of the many friends of the Haase family will be delighted to hear what he has to say.

> We enjoyed Dr. and Mrs. Faxon's visit with us early in November more than I can tell you. We certainly do miss Boston, the M.G.H., and all our good friends there.
>
> We find Gloversville a clean, friendly little city. It is a fine place for us to live. The children love it because of their freedom and many friends. As you might well guess, the chief industry is the making of gloves, seconded by the leather tanning industry.
>
> The hospital is more than you would expect in a community of this size (50,000 in the county—Fulton). I am having a lot of fun redecorating and introducing the use of color and some wallpaper into the patients' rooms.

THE NEWS

No. 98 Boston, Mass. February 1951

CHILDREN'S MEDICAL SERVICE ✓

The Children's Medical Service is enjoying the healthy and happy growth characteristic of an organism living in a particularly favorable environment (*see* Table I). Like the Babies' Hospital of the Presbyterian Medical Center, the Harriet Lane Home of the Johns Hopkins Hospital, the Pediatric Service of the Grace—New Haven Hospital, or the Pediatric Service of the New York Hospital, the Children's Service here at the Burnham Memorial Hospital for Children benefits by the knowledge and services compounded from all the departments and resources of a large general hospital. The well-being of a patient entering a hospital because of an ill-defined complaint may depend upon the availability and quality of any one of a dozen specialty services. Dependence on these specialized skills and services applies just as much to a pediatric service as to a medical service. Pediatrics is no more a specialty than is internal medicine, the distinction between the two being that the former deals with that third of the population that is growing and maturing, whereas the latter deals with the two-thirds that have completed their development and may be experiencing degenerative changes. Therefore, the existence of a pediatric service and medical service in a general hospital permits a great economy in the utilization of consultant and specialty services. Moreover, it provides a continuity of care of patients from infancy and childhood through adolescence and adult life and an integration of family health and medical services which are highly desirable.

Table I

Comparison of approximate figures for Children's Medical Service, illustrating growth from 1941 through 1949

	1941	1949
Full-time physicians with salary	1	3
Part-time physicians with salary*	0	8
Part-time physicians without salary	17	31
House Officers	5	10
Clinical and Research Fellows	1	15
Research Technicians	1	7
Out-patient new patients**	1200	2500
Out-patient return patients**	3900	6000
Out-patient total visits**	4100	8500
Total pediatric beds—M.G.H., Burnham, Eye and Ear Infirmary	80	130
Ward beds—M.G.H. or Burnham***	30	85
Average ward patients per day***	23	70
Total ward patients per year, M.G.H.***	350	1100
Pediatric Baker-type beds	?	21
Pediatric Baker-type patients	?	450

*Harvard Pediatric Study Staff not included

**Approximations

***Beds and patients in Emergency Ward, White 12, Eye and Ear Infirmary, and Baker Nursery not included, as numbers have remained fairly constant

In addition to the above, the Children's Service has obtained clinical opportunities at the Blossom Street Well-Baby Clinic, the Florence Crittenton Home, and in the Harvard Pediatric Study in Cambridge.

Rotation of house officers, through assignments at the Haynes Memorial Hospital and the Providence Lying-In Hospital, supplements the experience in contagious disease and care of newborns provided at the Burnham Memorial Hospital for Children, Massachusetts Eye and Ear Infirmary, M.G.H., Phillips House, and Baker Memorial Hospital.

This Children's Service is, perhaps, particularly fortunate in the degree of integration of total resources available for the care of its patients, teaching, and research. The physical facilities provided by the Burnham Memorial Hospital for Children, the MGH Emergency Ward, the isolation unit on the twelfth floor of the White Building, the Mallinckrodt metabolic unit in the Bulfinch Building, the Children's Unit in the remodeled Massachusetts Eye and Ear Infirmary, the Phillips House, and the Baker Memorial Hospital are excellent and diversified. The physicians caring for the infants, children, and adolescents in these various units and teaching the house staff and students include not only the pediatricians and the excellent general internists and surgeons, but also the outstanding specialists of this hospital. Among these last are the Harvard Medical School professors who are the chiefs of the following specialty or consultant groups at the M.G.H.: cancer, cardiology, dermatology, endocrinology, gastroenterology, gynecology, neurology, neurosurgery, ophthalmology, orthopedic surgery, oto-laryngology, psychiatry, rheumatology, and thoracic surgery. In addition to consultants in each of these various fields being available on call, each of these groups holds a consultant teaching conference every week, at which our pediatric cases may obtain the great benefit of group consultations.

This association with authorities in fields other than pediatrics is of obvious value in our teaching of pediatrics (*see* Table II). It is also essential to the training of the internists and surgeons in such a teaching center as the M.G.H. because they, as distinguished from pediatricians and "pediatric" surgeons, provide the medical and surgical care to some 70 percent of the children of this country. Incidentally, such education of internists in pediatrics seems more beneficial to the care of children in this country than having pediatricians spend a part of their training period in adult medicine learning geriatrics which they will never be concerned with again. The joint care of pediatric surgical patients by surgeons and pediatricians broadens the education and experience of both. The regular rotation of MGH medical interns through assignments in the Burnham Memorial Hospital for Children not only provides a period of pediatric training to internists but also makes the knowledge of the medical house staff available to the pediatric staff.

Table II

Teaching activities—Pediatrics
Massachusetts General Hospital

Lectures to 1st, 2d, and 3d year classes, Harvard Medical School
Two-fifths of 4th year clinical pediatrics
Elective course in 4th year pediatrics
Elective course in child psychiatry
Two-weeks' intensive graduate course in pediatrics (20-60 physicians)
Five-day graduate course in pediatric endocrinology (20-30 physicians)
Four- to eight-months' graduate course (4 graduate students at a time)
Teaching in child psychiatry to 4th year students, special graduate students and fellows, pediatric house officers, neurological service house officers, and psychiatrists from Veterans Hospitals
Pediatrics to Massachusetts General Hospital School of Nursing

We are very appreciative of the enthusiastic and expert services provided our infants, children, and adolescents by the other services, and also of the pleasant and effective relations that result from the notable lack of departmental possessiveness and jealousy here at the M.G.H. We trust the other departments benefit by this as much as we do, for the attainment by a hospital of its potentialities for quality and economy in teaching and care of patients is proportional not only to the diversity of its services but also to such integration as mentioned.

This coordination of pediatric and general hospital services favors not only breadth and quality in patient care and teaching but also an economy and organization of medical services that are important enough to deserve further comment. First, from such data as are available, provision of medical care to children under a prepayment plan that does not include parents and other adults may carry a cost per child that would deter voluntary enrollment in an insurance plan. The total services of the general hospital, therefore, are better suited to financing and distributing the costs of medical care by insurance than are the categorically limited services of a children's hospital. Second, the growing experience of our closely linked services of child psychiatry and adult psychiatry indicates the importance of dealing with the family as a whole rather than with a patient as an isolated individual. It is only by this means that the etiologic and therapeutic implications of the interrelationships of the individual child to his siblings, parents, inheritance, education, religious tradition, and economic and social status may be considered. Third, to give the family, which is the basic social unit of our society, the importance in medical care and education that it deserves, our teaching hospitals should provide means of integrating medical care in the home, the well-baby clinic, the ambulatory or outpatient clinic, and the hospital ward. As a step to this end, the Children's Service is expanding its home service to patients coming to the M.G.H. for care, who live in sections adjacent to the city and who have no private physician. In providing this family service, we hope the family physicians of the area, visiting nurses, and social service workers will participate as effectively as possible. This should permit an efficient and economical utilization of community professional personnel and facilities, and provide a service that will incorporate the neglected field of family medicine into the training of medical students, house officers, and nurses.

In a hospital like the M.G.H. that recognizes the significance of clinical investigation and provides facilities for this purpose in many departments, pediatric research profits greatly by close contact with the research in progress in other departments. Joint undertakings are possible, because many conditions occur in the child and in the adult. Some studies that are difficult to accomplish in a small and uncooperative human being are simple in a large and cooperative subject. The ready access to adult patients may speed the progress of an experiment. Some conditions occur in what might be called purer form in the child than in the adult and hence are more easily studied in the former. Examples of the benefit of integrated research, teaching, and care of patients by the pediatric and other services of the M.G.H. are indicated in Table III.

Table III

Studies pursued in conjunction with other Services

The problem	Cooperating Services
Diabetes	Internal medicine and pediatrics
Parenteral therapy of surgical patients	Surgery and pediatrics
Nephritis	Internal medicine and pediatrics
Burns	Surgery and pediatrics
Cancer	Huntington Memorial Cancer Hospital Service and pediatrics
Congenital anomalies	Cardiology, roentgenology, thoracic surgery, neurosurgery, orthopedic surgery, and pediatrics
Rheumatic fever	Cardiology and pediatrics
Rheumatoid arthritis	Arthritis Service and pediatrics
Psychiatry	Psychiatry and pediatrics
Nutrition	Gastroenterology and pediatrics
Poliomyelitis	Anesthesiology, laryngology, orthopedic surgery, physical medicine, neurology, psychiatry, and pediatrics
Allergic diseases	Allergy, dermatology, and pediatrics
Ulcerative colitis	Gastroenterology, surgery, psychiatry, and pediatrics

An undertaking yet to be accomplished to the satisfaction of all concerned is the operation of the Children's Medical Out-Patient on a real appointment basis. The aim is to have each patient, who is known to be coming to the clinic, given an appointment not only for a specified day but also for a specified time and specified doctor. Thus, doctor A will have appointments to see on day X new patient B at 9:45, new patient C at 10:15, new patient D at 10:45, return patient E at 11:15, and return patient F, who needs some special work-up that will be time consuming, at 11:30. Doctor A will be notified of these appointments the afternoon before day X. One doctor who will have no appointments will be in the clinic each day and thus be free to see patients who arrive without notification.

Finally, though the Burnham Memorial Hospital for Children was completed only 3 years ago and though our Child Psychiatry Service under Dr. Jessner has been functioning for but 2½ years, the demand for care of disturbed children is so great that the building of a seventh floor on the Burnham Memorial Hospital for Children is an imperative need. The plan has been drawn and a generous grant has provided one-third of the money to cover the estimated cost. We hope that others, by contributing their mite or much, will make possible the establishment of one of the few units in this country where children suffering psychiatric illness may be treated.

Allan M. Butler, M.D.,
Chief of Children's Medical Service

NEW TREATMENTS OF CEREBRAL VASCULAR ACCIDENTS

A number of papers claiming remarkable effectiveness of cervical sympathetic block with procaine in the treatment of hemiplegia from cerebral thrombosis or embolism have appeared, following an original suggestion made by Leriche in 1936. In this country, interest has recently been aroused by the enthusiastic reports of Gilbert and de Takats, and of Naffziger and Adams, and a popular article in *The Saturday Evening Post* entitled "They've learned something new about 'Strokes' ".

The careful studies of Cobb and his co-workers (The cerebral circulation: XXV. Remarks on clinical physiology. Ann. Int. Med. 7:292-302, 1933) cast serious doubts on the plausibility of these claims, as direct observations through a window in the skull of experimental animals showed very little dilatation of the cerebral vessels on interruption of the cervical sympathetic fibres. To Cobb and his group it seemed that a more effective increase in cerebral circulation could be brought about by inhalation of 5 percent carbon dioxide in oxygen.

The departments of the hospital interested in cerebral vascular disease are anxious to have an opportunity of studying a large number of cerebral vascular accidents and comparing the rate and extent of recovery in patients subjected to sympathetic block with untreated controls and others given inhalations of carbon dioxide in oxygen. The well-known variability of recovery from these conditions requires comparable observation of treated and control cases before any valid conclusions can be drawn. This has not been attempted by the authors of the previous reports, nor has the more physiological and simple method of treatment by carbon dioxide inhalation been given an adequate therapeutic test.

The undersigned are therefore requesting the staff to refer suitable cases in order that the value of treating cerebral vascular accidents by different methods purporting to increase collateral circulation may be assessed. It is very important to get the cases early; in fact, we would like to have them within a few hours of the thrombosis or embolism.

After serving devotedly and well for ten years as Chairman of the Ladies' Visiting Committee, Mrs. David B. Arnold resigned from her position on January 4.

In recognition of her many years of service, the Committee presented Mrs. Arnold with a very lovely silver bowl, of Paul Revere design, and bearing an etching of the Bulfinch Building and an inscription which expresses appreciation of Mrs. Arnold's generous services to the Ladies' Visiting Committee.

At the same meeting of the Committee, Mrs. Augustus Thorndike was elected as the new Chairman; Mrs. Edward D. Churchill was elected Vice Chairman; Mrs. Frederick Deane was re-elected Treasurer; Mrs. James T. Baldwin was re-elected Recording Secretary; and Mrs. Robert Baldwin was re-elected Corresponding Secretary.

* * *

The Board of Trustees has made two new appointments to the Administrative Staff. Mr. David C. Crockett, who has been Administrative Assistant to the Trustees for the past four years, is now Associate Director for resources and development in the hospital. Dr. Robert L. Berg (*M* 1944), who finished his residency here in December, is Assistant to the Director in the fields of research and education. The appointments became effective January 1.

* * *

Dr. Lezer has given us a new and higher figure for the MGH contribution to the 1950 Community Fund Drive. A final total of $20,121.08 was reached by the hospital, which, according to our arithmetic, is 137.8% of our quota, instead of the 121% reported in our January issue.

MASSACHUSETTS EYE & EAR INFIRMARY

The Infirmary paid tribute to Miss Annie Munro Robertson's loyal and faithful service as Assistant to the Director of the Massachusetts Eye and Ear Infirmary at a tea given at the Nurses' Residence on December 14. Miss Robertson, who resigned her position December 30, had been with the Infirmary for 23 years. Before a gathering of friends and co-workers, Dr. Nathaniel W. Faxon, former Director of the Infirmary, presented Miss Robertson with a wrist watch and a check from employees and staff.

The Board of Managers honored Miss Robertson with an Award of Merit "in recognition of loyal and distinguished service to the hospital and its patients above and beyond the requirements of duty", and an engraved silver tray. Also, in appreciation of her help and interest in their work, the Ladies' Visiting Committee presented Miss Robertson with a leather pocketbook and a check.

Miss Robertson was born in Danville, Quebec, and came to the United States in 1907 to enter the MGH Training School for Nurses, from which she graduated in 1910. During World War I she was an Army Nurse, stationed in France with Base Hospital #6 and a member of an operating team at the front with Dr. Lincoln Davis and Dr. Beth Vincent.

On her return from France she served in the OPD of the Montreal General Hospital until 1923, when she was called back to the M.G.H. to serve as Executive Assistant under Dr. Washburn. In 1927 she moved to the Infirmary as Assistant to the Director, where she served four Directors in the 23 years. Miss Robertson will make her home in Montreal with her sister, Miss Maude Robertson.

As successor to Miss Robertson, Mrs. Edward Wayland began her duties on January 1. An MGH graduate, from New Haven, Connecticut, Mrs. Wayland has had wide experience in executive management. She was Instructor of Nurses and Supervisor at the Infirmary shortly after her graduation and has filled several positions on the nursing staff at the M.G.H. After her marriage Mrs. Wayland held executive positions in Connecticut health agencies and hospitals, and from 1941 to 1945 was Superintendent of the Johnson Memorial Hospital in Stafford Springs, Connecticut.

The members of the medical, teaching, and social service staffs of the Winthrop Foundation were hosts on January 10 to a group of public and private school teachers at a symposium on "The rehabilitation problems of the deaf and hard-of-hearing child". Ninety teachers and principals attended the afternoon meeting, presided over by Dr. Donald K. Lewis, Associate Surgeon in charge of the Winthrop Foundation. "Medical aspects of rehabilitating the deaf and hard-of-hearing child" were discussed by Dr. Bernard Zonderman, Assistant Surgeon in charge of the children's study group at the Foundation. Miss Helen Patten, Director of the Speech Training Program, spoke on "Helping the deaf child to communicate". She was assisted by Miss Edith Rosenstein, speech teacher, and several young pupils. "Other community resources for the deaf and hard-of-hearing child" were reported by Miss Harriet Smith, Director of the Sarah Fuller Foundation for Little Deaf Children, and Miss Opal Fisher, Executive Director of the Boston Guild for the Hard of Hearing. Miss Madeline Shipsey, social worker for the Winthrop Foundation, spoke on "The social adjustment of the deaf child". The meeting closed with a sound movie entitled "Pay attention: Problems of hard-of-hearing children". This meeting was the second of a program inaugurated last year at the Winthrop Foundation.

The Executive Committee of the Infirmary held a special meeting on January 10 to make new medical appointments to the Ophthalmological and Oto-Laryngological staffs. For the ENT staff, Dr. Arnold S. Morel, Dr. Earle W. Rice, and Dr. Daniel E. M. McNamara were voted residencies, their services to begin at the discretion of Dr. LeRoy A. Schall. The Eye staff recommended Dr. Robert B. Leavelle, Dr. Raymond D. Sudarsky, Dr. Peter Beck, Dr. Joseph L. Dowling, Jr., Dr. Richard B. Chapman, Dr. Robert J. Herm, Dr. Carlos J. Margarida, with Dr. Bernard H. Zeavin, Dr. William E. Winn, Jr., and Dr. Wade Rockwood as alternates.

Miss Anita Mangiaracine, Director of the Bacteriology Laboratory at the Infirmary, spoke to the Medical and Surgical staffs of Murphy Army Hospital at Waltham on "Antibiotics" on December 17. Miss Mangiaracine has also had a paper accepted for publication by the *New England Journal of Medicine* on "Oral moniliasis following antibiotic therapy—A warning".

The Board of Trustees, at their meetings on December 15 and 29, voted:

To accept with regret the resignation of Dr. Somers H. Sturgis as Assistant Surgeon, effective January 1;

To invite Dr. A. L. d'Abreu to serve as Visiting Surgeon pro tem this winter;

To accept the proposal of the Bay State Medical Rehabilitation Clinic to establish a Rehabilitation Center in old Ward I;

To approve the appointment of Dr. Arthur L. Watkins as Medical Director of the Bay State Medical Rehabilitation Clinic.

To appoint:

Dr. Gordon Brownell as Associate in Physics, a three-year appointment effective January 1;

Dr. Manucher Javid as Second Assistant Resident in Neurosurgery for one year, beginning January 1;

Dr. J. Drennan Lowell as Assistant Resident in Orthopedic Surgery, beginning October 1, 1952;

Dr. Farahe Maloof as Assistant in Medicine, effective January 1;

Dr. Arthur F. O'Keeffe as First Assistant Resident on the Surgical Service, beginning January 1.

At their meetings during December 1950 and on January 3 and 10, 1951, the General Executive Committee voted to promote:

Dr. Ernest S. Crawford to the position of First Assistant Resident in Surgery, beginning January 1;

Dr. James J. Ferguson, Jr. from the position of Intern to that of Assistant Resident in Medicine, effective either July 1 or October 1, dependent upon the requirements of the military situation;

Dr. Stewart Ragland, Jr. from the position of Intern to that of Assistant Resident in Medicine, as of July 1.

To appoint:

Dr. Gregory Bard a Clinical Fellow in Physical Medicine for one year, beginning January 1;

Dr. Hudson H. Bates as Clinical Fellow in Psychiatry, effective January 1;

Dr. Jaime Cortazar as Graduate Student Assistant in Medicine, effective December 13, 1950;

Dr. Daniel Joly as Clinical and Research Fellow in Surgery for the period beginning January 2 and ending July 1;

Dr. Jules Laberge as Clinical Fellow in Radiology for one year, beginning January 1;

Dr. James R. O'Neill as Clinical and Research Fellow in Medicine, effective December 13, 1950;

Dr. William R. Waddell as Research Fellow in Surgery, beginning January 1, this appointment to run concurrently with his appointment as Resident in Surgery.

The General Executive Committee also voted to change Dr. Philip H. Henneman's title from that of Research Fellow in Medicine to that of Clinical and Research Fellow in Medicine, effective as of July 1, 1950.

* * *

At its meeting in Cleveland in December, the Board of Trustees of the American Medical Association elected Dr. Arthur L. Watkins a member of the Council on Physical Medicine and Rehabilitation.

* * *

Some time ago Mr. George E. Hamilton, genial custodian of our doctors' parking lot, instituted the custom of giving a prize each year to the person who had done the best job of parking. The prize for 1950—a box of nice chocolates—was awarded to Miss Muriel Dow of the O.P.D. Mr. Hamilton says that Miss Dow has set an example which might well be emulated by some of our doctors. He submits the following motto for general adoption: "Take an extra minute and park your car properly. We need every available inch of room."

GYNECOLOGICAL OUT-PATIENT CLINIC

The Gynecological Out-Patient Clinic was first opened on January 1, 1948, at the same time that the new Vincent Memorial Hospital was dedicated. The Vincent Memorial had existed as the Gynecological Service of the Massachusetts General since 1942, with Dr. Joe V. Meigs as Chief of Staff, and had been housed on White 7 and 8 during the war years. With the completion of the new Vincent Hospital and the opening of the ward beds came a new arrangement with the Surgical House and Resident Staff, i.e., they served full time on the Gynecological Service. Because of the need for additional ward bed patients and because of the need to teach the Resident Staff the office practice of gynecology, an Out-Patient Clinic became necessary. This Clinic has become an important cog in the gynecological machinery—feeding the ward with patients and serving as a teaching center for students, house officers, and postgraduate physicians.

The enthusiasm of the Resident and Visiting Staff has been real and helpful, and the Clinic has rapidly expanded during its brief three-year existence. At first, there were few new patients—only 4 in a five-month period in 1948. Now, approximately 25 new patients and 250 old patients are seen each month.

The physical set-up has had to expand to meet these increasing needs. The Clinic opened in a part of the Female Out-Patient Department. Considerable improvement has taken place, in spite of shortages and hospital deficits. All of the rooms have been attractively repainted and new flooring put down, and each room is fitted out with examining table, chairs, and writing desk. The dressing room now has four cubicles for disrobing and individual lockers for clothes. The hall has been changed into a waiting room, complete with magazines, tables, and electric fans—thoughtful gifts from the Vincent Club. The set-up of the Clinic has been rearranged so that there is no longer need to pass through examining rooms *en route* to the laboratory. In recent months, the remaining room on the floor, formerly occupied by the Veterans' Language Clinic, has been turned into a teaching room. This additional space has allowed us to function much more efficiently, giving the medical students a place to assemble. Here, also, the instructor has available a large blackboard. The discussion of the patient's illness is carried on here, avoiding the congestion in the laboratory or hall that used to occur. The patient can no longer overhear remarks about the possible seriousness of her disease. The Clinic secretary uses this room, too, and here the dictation is done which has so improved our records and our public relations.

For the past year the Clinic has had a full-time secretary to whom the Staff dictates all histories and descriptions of physical examinations. This has been made possible by funds resulting from the annual two-week Postgraduate Course in Gynecology presented by the department. This arrangement speeds up the Clinic and has vastly improved the records. The secretary helps to advance the public relations of the Gynecological Clinic. A letter is sent to every local doctor who refers a patient to the Clinic. If the patient is admitted to the house, a summary of the house admission is included. Our relations with the L.M.D. have so improved as a result, that several have commented favorably on the change.

We have been particularly fortunate in securing, through Mrs. Paul G. Courtney, Chief of the Volunteer Service, four Nurses' Aides. These Aides have given regularly of their time and energy, coming daily from 10 A.M. to 1 P.M. They do many tasks which free the nurses for more specialized duties. They manage the dressing room, chaperon the patients, run errands, and help in countless ways. These devoted women have materially aided the Staff in the care of the patient.

The majority of the patients on the Gynecological Ward come from the Out-Patient Clinic. In order to have the ward beds full, so that the Resident Staff can learn gynecological surgery, an active Out-Patient Clinic is a necessity. Each visiting man has a day in the Out-Patient and additional help is secured from members of the Obstetrical Staff. Visiting and Resident Staff can see patients together and free discussion of cases results. It is in the Out-Patient that the Resident Staff is offered the opportunity to learn about the problems seen in gynecological practice, especially problems in sterility and endocrinology.

The Gynecological Service has a teaching responsibility to the Harvard Medical students who take their 2d and 3d year surgery at the Massachusetts General Hospital. Each day four students report and work with the Staff. It is here that the art of physical diagnosis and the principles of gynecology can best be demonstrated and learned. Here the student is offered the opportunity to examine and treat his first patients, under the direct supervision of some member of the hospital Staff. Since he works both in the Out-Patient and on the hospital ward, he may follow the patient from admission to the Clinic through the hospital treatment and follow-up.

The Gynecological Service gives, for the Harvard Medical School, a six-months' Postgraduate Course. The men who have taken this course have been either doctors from foreign lands or American doctors in search of additional training for their American Board of Obstetrics and Gynecology requirements. These graduate students take an active part in the Out-Patient routine. Instruction in the medical aspects of gynecology often interests these men more than the very technical surgical procedures.

The Gynecological Out-Patient Department, in its three-year existence, has grown rapidly and is now a valuable part of the Gynecological Service.

Francis M. Ingersoll, M.D.,
Chief of Gynecological Out-Patient Clinic

Dr. Somers H. Sturgis left the Vincent Memorial Hospital on January 1, to assume his new duties as Chief of Gynecology at the Peter Bent Brigham Hospital. He will be greatly missed here by both patients and staff. We are sure he will be most successful in his new work, and we wish him the best of luck.

Dr. John McL. Morris is planning to go to Europe on a Damon Runyan Fellowship of the American Cancer Society to do some work in Stockholm and in England on radiation sensitivity of cancer. He plans to leave in February and return here next year. There is mounting evidence to the effect that he will take a bride with him. The wedding is to be a small one, just before the Morrises' departure on the Gripsholm on February 15.

STAFF PUBLICATIONS

The final installment of titles of 1950 publications by members of the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary staffs appears below. No 1951 titles were received before the deadline date for this issue. The lists, as they have appeared in THE NEWS since last summer, will now be assembled and published as the Massachusetts General Hospital—Massachusetts Eye and Ear Infirmary Publications for 1950.

Because the plan to cover in this way all 1950 staff publications was not inaugurated until the middle of the year, it was necessary to include each month early 1950 titles as well as current ones. But, now that we have caught up with ourselves, the convenience of finding current, or very nearly current, titles in the list each month will be greatly appreciated by everyone on our staffs. Therefore, please send your titles *promptly* to Cora F. Holbrook, Editor of THE NEWS, together with 1) classification of material, 2) title of article, 3) title of publication in which it appears, together with the volume number and page numbers. For books, give the publisher's name and address.

The deadline date for each issue of THE NEWS is the 12th of the preceding month.

All requests for reprints are to go directly to the individual authors, and *not* to Treadwell Library nor to THE NEWS.

The following 1950 titles were submitted, in addition to the 194 already published in THE NEWS:

Dermatology

Blank, I. H., and Coolidge, M. H.
Degerming the cutaneous surface. I. Quaternary ammonium compounds.
J. Invest. Dermat. 15:249-256.

Blank, I. H., and Coolidge, M. H.
Degerming the cutaneous surface. II. Hexachlorophene (G-11).
J. Invest. Dermat. 15:257-263.

Blank, I. H., Coolidge, M. H., Soutter, L., and Rodkey, G. V.
A study of the surgical scrub.
Surg., Gynec. & Obst. 91:577-584.

Blank, I. H., and Miller, O. G.
A method for the separation of the epidermis from the dermis.
J. Invest. Dermat. 15:9-10.

Frazier, C. N., Bensel, A., and Keuper, C. S.
Phenomena of disease in rabbits fed cholesterol and inoculated with Treponema pallidum. II. Infectivity of blood.
Am. J. Syph., Gonor. & Ven. Dis. 34:453-459.

Frazier, C. N., and Leeper, R. W.
The treatment of common skin diseases.
M. Clin. North America 34:1473-1486.

General Medicine

Aub, J. C.
This business of cancer research.
Cancer Research 10:399-402.

King, D. S.
Medical progress: Tuberculosis.
New England J. Med. 243:530-536, 565-572.

Nathanson, I. T.
Hormonal treatment in cancer.
M. Clin. North America 34:1409-1417.

General Surgery

Anderson, R. M., Schoch, W. G., and Faxon, H. H.
Cardiac arrest.
New England J. Med. 243:905-909.

Daland, E. M.
Cancer of the breast.
In Cancer — A manual for practitioners, 2d Edition, Boston, American Cancer Society (Mass. Div.) Inc., pp. 116-125.

Daland, E. M.
The incidence of swollen arms after radical mastectomy and suggestions for prevention.
New England J. Med. 242:497-502.

Daland, E. M.
Symptoms, examination, and principles of treatment.
In Cancer — A manual for practitioners, 2d Edition, Boston, American Cancer Society (Mass. Div.) Inc., pp. 40-43.

Dobyns, B. M.
Present concepts of the pathologic physiology of exophthalmos.
J. Clin. Endocrinol. 10:1202-1230.

Halsted, J. A., Harris, E. J., and Bartlett, M. K.
Involvement of the stomach in familial polyposis of the gastro-intestinal tract.
Gastroenterology 15:763-770.

Ratcliffe, J. W., Bartlett, M. K., and Halsted, J. A.
Diverticulosis and acute diverticulitis of the jejunum.
New England J. Med. 242:387-390.

Taylor, G. W.
Surgical management of cervical lymph node metastases.
Radiology 55:60-61.

Taylor, G. W., and Wallace, R. H.
Carcinoma of the breast: Fifty years experience at the Massachusetts General Hospital.
Ann. Surg. 132:833-843.

Gynecology and Obstetrics

Nathanson, I. T.
Extraperitoneal iliac lymphadenectomy in the treatment of cancer of the cervix.
Prog. in Gynec. 2:565-573.

Nathanson, I. T.
Hormones in relation to tumors of the female.
Prog. in Gynec. 2:218-238.

Laboratory Science

Chantrenne, H., and Lipmann, F.
Coenzyme A dependence and acetyl donor function of the pyruvate-formate exchange system.
J. Biol. Chem. 187:757-767.

DeVries, W. H., Govier, W. M., Evans, J. S., Gregory, J. D., Novelli, G. D., Soodak, M., and Lipmann, F.
Purification of coenzyme A from fermentation sources and its further partial identification.
J. Am. Chem. Soc. 72:4838.

Dienes, L.
Isolation of L type cultures from Clostridia.
Proc. Soc. Exper. Biol. & Med. 75:412-415.

Dienes, L., Weinberger, H. J., and Madoff, S.
Serological reactions of L type cultures isolated from Proteus.
Proc. Soc. Exper. Biol. & Med. 75:409-412.

Dienes, L., Weinberger, H. J., and Madoff, S.
The transformation of typhoid bacilli into L forms under various conditions.
J. Bact. 59:755-764.

Engel, L. L.
The chemical estimation of steroid hormone metabolites.
In Recent progress in hormone research, vol. 5, New York, Academic Press, Inc., pp. 335-372.

Engel, L. L., Slaunwhite, W. R., Jr., Carter, P., and Nathanson, I. T.
The separation of natural estrogens by counter-current distribution.
J. Biol. Chem. 185:255-263.

Gottschalk, C. W.
An experimental and comparative study of renal interstitial pressure. (Abstract)
Am. J. Physiol. 163:716.

Hoagland, M. B., Grier, R. S., and Hood, M. B.
Beryllium and growth. I. Beryllium-induced osteogenic sarcomata.
Cancer Research 10:629-635.

Lipmann, F.
Biosynthetic mechanisms.
In Harvey Lectures, XLIV, Springfield, Ill., Charles C. Thomas, pp. 99-123.

Loftfield, R. B.
Synthesis of C-14 carboxyl-labeled tyrosine and diiodotyrosine.
J. Am. Chem. Soc. 72:2499-2500.

Raker, J. W., Taylor, I. M., Weller, J. M., and Hastings, A. B.
Rate of potassium exchange of the human erythrocyte.
J. Gen. Physiol. 33:691-702.

Weinberger, H. J., Madoff, S., and Dienes, L.
The properties of L forms isolated from Salmonella and the isolation of L forms from Shigella.
J. Bact. 59:765-775.

* * *

We feel that Dr. Means's account, given in our January issue, of the birth of the MGH Club of Richmond may be the first (or is it the first?) of a growing line of siblings here in the U. S. A. And now, from Dr. Paul D. White, comes this announcement of a group outside this country which wishes to establish a relationship-of-sorts with the Massachusetts General Hospital. Here is Dr. White's note:

> I thought you might be interested in a recent experience of mine in Havana, where I found a great desire by the staff of the University Hospital and the Rector of the University of Havana (who is a pediatrician) for a close friendly contact and cooperation with the Harvard Medical School and the Massachusetts General Hospital. They have plans down there for a greatly expanded "Monobloque" University Hospital. The Minister of Health, whom I met, spent three years in medical studies in Boston many years ago and also has a warm regard for Boston medicine and a desire for such closer cooperation.

CHILDREN'S MEDICAL SERVICE STAFF

Front row: Dr. Leslie Corsa, Jr., Dr. John D. Crawford, Dr. Nathan B. Talbot, Dr. Allan M. Butler, *Chief of Service,* Dr. Benjamin F. Miller, Dr. Gertrud C. Reyersbach

Middle row: Adrienne M. Campbell, technician, Dr. John B. Reardan, Dr. Charles H. Read, Jr., Dr. Frederic M. Blodgett, Dr. Doris R. Bennett, Dr. Edgar J. Schoen, Dr. Franklin L. DeBusk, Dr. Charles A. Leach, Jr., Dr. Stanley Berlow, Marguerite Wood, technician

Back row: Lois Gessman, technician, Dr. John F. Hogan, Jr., Dr. Hans G. Keitel, Dr. Gerald A. Kerrigan, Dr. Leonard W. Cronkhite, Jr., Elsie A. MacLachlan, technician, Aniela S. Zygmuntowicz, technician, Margaret Berg, technician, Mary Frances Morrill, technician, Dr. Iwao Uyeda

My visit was due to an invitation to take part in honoring a notable Cuban physician, Dr. Francisco Cabrera Saavedra, the centenary of whose birth was celebrated in December. I was asked to give three lectures.

Dr. Henry M. Griffiths (*clin. fel. S* 1950) sent us this very cordial note just before he left for South Africa.

I would like to tell you that if anyone from the M.G.H. is coming to South Africa, my home and my services are entirely at his disposal to help make his visit a pleasant one. This will enable me to return, in some way, at least a part of the many kindnesses I have received during my pleasant stay in Boston for study at the M.G.H.

My home address is: Main Road, Rondebosch, Cape Town, South Africa.

This letter arrived from Dr. George A. Culver (*a.r. An.* 1950). It bears the address: Baylor University, College of Medicine, Houston 5, Texas.

I am Chief of Anesthesia at the Veterans Administration Hospital and Assistant Professor of Anesthesia for Baylor. There is plenty to keep me busy, but I miss the atmosphere and associations of good old M.G.H.

I look forward to receiving THE NEWS.

New addresses:—

Dr Thornton Brown (*r.s. Or.* 1948), 234 Marlboro St., Boston, Mass.

Dr. Hugh Chaplin, Jr. (*M* 1948), Blood Transfusion Unit, British Postgraduate Medical School, Hammersmith Hospital, Ducane Road, London, W 12, Eng.

Lt. William N. Christenson, MC, USNR (*a.r. Psychiat.*), 1117th ASU Hospital, Camp Edwards, Mass.

Dr. Howard S. Colwell (*EM* 1916), 309 Edwards St., New Haven 11, Conn.

Dr. David W. Compton (*r.p. An.* 1946), 2740 61st St. SE., Mercer Island, Wash.

Dr. Diane Croll (*r.p. P* 1948), Department of Internal Medicine, University Hospital, Iowa City, Iowa.

Dr. F. Chester Durant (*past dn. s.*), Box 91, South Freeport, Maine.

Dr. John S. Harter (*WS* 1935), 212 Brown Bldg., Louisville, Ky.

Dr. Robert D. Heath (*a. r. Or. S* 1950), 30 W. Bells Mill Road, Chestnut Hill, Philadelphia, Pa.

Dr. Robert H. Hepburn (*r.s. U* 1943), 85 Jefferson St., Hartford, Conn.

Major Roy W. Leeper, MC, USAR (*r.p. D* 1950), Murphy Army Hospital, 424 Trapelo Road, Waltham, Mass.

Lt. John W. Littlefield, MC, USNR (*M* 1948), 10 Cushing St., Providence 6, R. I.

Dr. Burness E. Moore (*r.p. Psychiat.* 1942), 1148 Fifth Ave., New York 28, N. Y.

Lt. John B. Reardan (*CM*), Div. Surgeon Bldg. #240, SFPE Fort Mason, San Francisco, Cal.

Dr. Earl S. Seale (*a.s. Oph.*), 99 Bay State Road, Boston 15, Mass.

Dr. Joseph L. Shugar (*a.r. Or. S* 1950), Apt. 1, 70 Middlesex Road, Waltham, Mass.

Dr. John D. Wade (*clin. & res. fel. S* 1950), 20 West Camus Road, Fairmilehead, Edinburgh, Scotland.

Lt. Weldon W. West, MC, USAR (*S* 1948), 3130 N. El Dorado St., Stockton, Cal.

Major James G. Wood, Jr., MC, USAR (*clin. fel. R* 1950), APO 438, c/o Postmaster, San Francisco, Cal.

Brief bits:—

Dr. Joseph S. Barr, Chief of our Orthopedic Service, was made President-elect of the American Academy of Orthopedic Surgeons at their annual convention in New York in February 1950. Dr. Barr assumed the duties of President at the annual convention held this year in Chicago on February 1.

Dr. Robinson LeR. Bidwell, II (*ES* 1943) is the father of a daughter born on December 26. Dr. Bidwell's address is 203 State St., Portland, Maine.

Dr. Edward D. Churchill, Chief of Surgical Services at M.G.H., gave the "1950 Lecture in Surgery" for the Royal College of Physicians and Surgeons of Canada, in Montreal on December 12. His title was "Wound-shock". At this convention Dr. Churchill was made a Lecturer of the College.

Dr. Edward A. Gall (*r.p. P* 1937) was appointed to the position of Professor of Pathology in the College of Medicine of the University of Cincinnati in 1948, and Director of the Laboratory of Pathology of the Cincinnati General Hospital.

Dr. Robert G. Greene, who was to have begun as Assistant Resident in Orthopedic Surgery here on July 1, was called to active military service on December 15.

Miss Lucy G. Morse, past Head of our Occupational Therapy Department, is starting a curative workshop in Lansing, Michigan. Her address is 1227 West Ionia St.

* * *

The Class of 1924, Massachusetts General Hospital School of Nursing, presented the Burnham wards with a record player and a set of unbreakable records for children, as a Christmas present this year.

The Pediatric Service, through its Assistant Supervisor in Pediatrics, Jeanne Ross, R.N., expresses its pleasure and appreciation. Such a gift offers the children hours of recreation and helps them to develop interest and independence in selecting and providing their own entertainment. Even pre-school children enjoy the songs and stories, and soon learn, with very little help, to play the records they wish to hear.

THE NEWS

MASSACHUSETTS GENERAL HOSPITAL 1811

No. 99 Boston, Mass. March 1951

DEPARTMENT OF ANESTHESIA

INVESTIGATION

Just as pain is the central reason for the clinical anesthetist's existence, so too pain provides a wide field for study. The width and depth of this field extend beyond any simple limits, for problems of anesthesia are inextricably bound up with problems of cellular irritability. And this is as fundamental a characteristic of living tissue, of life itself, as one could ask for. The irritability of a cell, the response of a cell to a stimulus is, I suppose, the most elemental form of consciousness. The specific lines of work we follow come from the problems suggested in these statements.

Our principal clinical as well as laboratory interest has to do with pain, how to measure it, and what the factors are which modify its perception and the reaction to it. We have learned how to measure pain in terms of pain relief. The method Dr. Denton and I devised has been improved by Dr. Keats, so that it is quite exact. In this, groups of 20 or 25 patients having pain are studied. The factor of interest is the percentage that get satisfactory pain relief from a given procedure. These data are compared with the relief obtained from a placebo on one hand and morphine on the other. All observations are made without the active participants knowing what agents were used.

During this work we found an interesting thing: It is necessary to study pain of pathological origin to get dependable results. Experimentally produced pain has little or no value and can be seriously misleading. The use of experimentally produced pain, whether by heat to the forehead, skin pricks, electric shocks to teeth, tourniquet pain, or whatever, has led to confusing and foolish statements, such as the "finding" that aspirin has no analgesic power, and so on.

The original painful stimulus is modified if it is a consequence of disease or serious trauma, so that it is a very different thing to work with than experimental pain, lacking as it does serious import. With our method we have at last a means of attacking problems of pain and of pain relief in a quantitative manner.

A second line of work has to do with the alternating consciousness and unconsciousness of sleep and the influence of drugs on sleep. Dr. Brazier in this laboratory has discovered the first good end-point of wakefulness, essential in the study of sleep. With the onset of sleep the origin of the spontaneous electrical activity in the brain shifts from two centers near the occiput to the two centers in the frontal region of the brain as sleep begins.

Using techniques we have evolved and standardized, we have been able to measure the deleterious effects of a common sleeping pill many hours after its ingestion, even though the dilution of the pill was one part pill in 700,000 parts of man at the beginning. Mr. Goodnow took a principal part in this work. As an aside, I can say that the data obtained in this study offer measured evidence of persistent impairment by even a single sleeping pill and should be useful in supporting tighter social legislation concerning the sale of such agents.

There is a close relationship between the two lines of work just referred to: We have shown for the first time that an ordinary dose of a sleeping pill (a hypnotic, so-called) has real pain-relieving power, less than but similar to that of the narcotics. Since both types of agents have hypnotic power the classic difference between them (power to relieve pain) disappears. There are other close relationships between the two types of work, but there is not space enough to go into them here.

A third and final line of work is a necessary foundation for the first two: to establish what are the metabolic effects of the central nervous system depressants, the anesthetic agents. To understand the effects of the agents we employ in the first two lines of work, we must understand how the agents used alter the normal state of the body — to take one example, acid-base balance. In the literature on the metabolic effects of anesthesia one can find almost any statement he wants. A very large part of the work reported in this field is entirely undependable as far as man is concerned, and for two reasons: it was obtained in anoxic subjects, and most of the subjects others have used were animals, not man. The frog and the dog are less comparable to man than some have supposed. Practical benefits have come out of our basic pharmacological work in this field. For instance, all pharmacology books describe how ether anesthesia produces acidosis. It does, indeed (but not of the type described), in the dog. It does not produce either type of acidosis (metabolic or respiratory) in adult man.*

The three lines of work are really inseparable. Whatever we do fits into the framework described above and is directed toward the specific goals mentioned there. Vagueness and diffuseness are not necessarily related to a wide view or to an extensive endeavor. The test of success must, of course, be sought in the published work. Notwithstanding the broad field, we believe that our focus is sharp.

THE CLINIC

Since the war we have greatly expanded the clinical activities of the Anesthesia Service: ether, divinyl ether, cyclopropane, ethylene, and nitrous oxide are in common use for inhalation anesthesia. Although we have been more restrained than some in our enthusiasm for cyclopropane and ethylene, we use them steadily in order to keep our hand in for the occasions when they may truly be indicated. Pentothal is widely used for intravenous anesthesia, but within the boundaries we were able to define rather exactly during the war. Avertin remains for rectal anesthesia more as a historical curiosity than as an important adjunct. However, it has an occasional field of usefulness in children. We were berated a dozen years ago for criticism of avertin. The view expressed at that time has been accepted and now the agent, not our view, is generally considered to be dangerous. All of the common regional blocks are in steady use, as well as the various techniques of spinal anesthesia, single shot, continuous or catheter spinal. Reports of persisting nerve damage from over the country as a whole are causing us to retrench somewhat as far as continuous and catheter spinals are concerned. Curare is used cautiously. I should like to say more about that in a moment.

The Anesthesia Service provides aspiration bronchoscopy coverage round the clock. Thanks to the indoctrination the residents receive under Dr. Benedict in his Bronchoscopic Clinic, this works well.

Inhalation therapy, principally oxygen therapy, is carried on throughout the Hospital as one of the activities of the Anesthesia Service. The loyal support of the Hospital's administration has made it possible for us to have the best equipment obtainable.

The clinic offers a rich vein of material for the study of human pharmacology. As indicated above, some of these studies are concerned with basic pharmacology and physiology, and others with applied. An advantage we have over the usual type of basic scientific laboratory is this great opportunity to study man. In our view the hospital offers, for the protection of the subject, the proper place to study man. Much of the work referred to in the section on Investigation is based upon the clinical material available.

---

*While many had discussed the probable evils of high carbon dioxide tensions in thoracic surgery, Miss Murphy and I were able to show by actual measurement that dangerously high tensions existed. This work has been widely confirmed and is being continued by Dr. John P. Bunker and Dr. Ellis N. Cohen. We are now studying the effect of these high carbon dioxide tensions on the fixed acids that accumulate in the blood.

We also carry out other work in the clinic; for example, we are attempting to make a realistic approach to the hazards of the various anesthetic agents and techniques. This requires study of many thousands of cases. To this end we are directing a simultaneous inquiry in ten university hospitals over a five-year period. Data obtained under these circumstances would, of course, describe results found under the best of conditions. With this study only half done, it is clear that even these "best" data are not good enough. In addition to the goals mentioned, other points of value emerge: It is more dangerous to be a negro than a white man and undergo anesthesia; it is more dangerous to be a child than an adult; curare has dangers not yet adequately recognized. In short, this study makes very clear where trouble zones lie and where work is needed.

One of the most important functions of the clinic is to train men and women, physicians and nurses. There are in our Department six different categories of trainees: anesthesia residents, fellows in anesthesia, surgical residents on the Anesthesia Service, dental residents on the Anesthesia Service, medical students, and nurses. The work of Dr. Briggs, Dr. Donaghy, and Dr. Todd has been of great importance in these activities.

Interrelationships within the Hospital and with the University

From one point of view, anesthesia is the narrowest field in medicine. From another, and better, viewpoint a properly set-up department of anesthesia is a broad and inseparable part of the life of the hospital as a whole and of its medical school. We are concerned not at all with whether anesthesia is or is not a specialty.

Since very few outside the Department know the extent to which we have entered into the life of the Massachusetts General Hospital and the Harvard Medical School, it may be well to summarize our general interrelationships. Our home is, quite properly, I think, within the Department of *Surgery*, where Dr. Churchill got me interested in anesthesia and helped in countless ways. It was he who laid the first plans for the Department of Anesthesia. Our clinical activities have already been mentioned. These, with a modest share in the training of the surgical residents, give us a claim to the Department of Surgery. (I have referred elsewhere in this article to our close relationship with the *Bronchoscopic Clinic*.)

I really believe that all surgical residents who have spent two months on our service would agree that they are better surgeons for it; at any rate, we can testify that they are easy for us to live with as they rise to responsible positions on the House Staff.

Several lectures at the School, in the Department of Surgery, as well as clinical teaching of medical students, increase our feeling of belonging to the Department of Surgery.

Our roots go down very deep into the Department of *Medicine*, too, for it was Dr. Means who first interested me in respiration and who first started me out on research in medicine. We hope he will not be embarrassed by the responsibility he must share for our present state.

In physical terms we have some activities in the Department of Medicine: all oxygen therapy on the Medical Service is under the charge of the Anesthesia Department. A joint research effort with Dr. Walter Bauer's group on the pain of arthritis was temporarily held up by the war, but got under way in January with Dr. Louise Clark.

In *Cardiology*, the advice and support of Dr. Paul D. White and, later, Dr. Bland has helped us out of many a hole.

In *Psychiatry and Neurology*, Dr. Cobb has always been ready with help in problems of consciousness and unconsciousness, and he is to be a principal participant in a new comparative study on narcoanalysis which has just been started in our laboratory with Dr. Lincoln Clark. Dr. Brazier, from Dr. Cobb's Department, is now part-time in ours and is an indispensable associate in neurophysiological matters. She has been the chief stimulus to the work of Dr. Rudin of our Department. (Dr. Rudin has only recently shown how it is possible to "dis-articulate" the central nervous system and study individually some of the tracts. This opens up a new field in experimental neurophysiology.)

Men from the *Neurosurgical Service*, as well as medical students, can often be found in our laboratory studying the electrical characteristics of the dorsal columns of cats or the cockroach's ganglia. On the clinical side, Dr. James White has been a great help to us in regional block problems.

We give clinical training to residents in *Dentistry* and help with their Out-Patient Department problems.

At the Medical School I give the eight lectures on the anesthetic agents in the Department of *Pharmacology*, through the courtesy of Professor Krayer. We have for several years had a salaried consultant from the Department of *Biochemistry*. We owe a very great debt to Professor A. Baird Hastings for his tirelessness in helping us over obstacles in acid-base equilibria. These close relationships with the basic science laboratories at the Medical School go back to the very beginning of our Department, when Professor Alexander Forbes gave me not only laboratory space and equipment in the Department of *Physiology* which I did not then have, but, even more important, gave me his very close association. These things, plus lively participation with the medical students (three National Scholars are either working in our laboratory or are planning to do so), bind us close to the other end of town. One of our most important academic relationships is across the river, where Professor Frederick Mosteller of the Department of *Social Relations* is the mathematician member of our Department, as a consultant. Without his help we never could have worked out the mathematical validation of our work on pain and pain relief, nor could we have demonstrated the psychomotor impairment by hypnotic doses of barbiturates referred to elsewhere in this report.

These relationships and many others that could be mentioned have produced demonstrable fruition, not only in anesthesia but in other fields as well. We take a certain pride in that seven men who at one time worked in our laboratory now occupy professorships in fields other than anesthesia; in addition, we have supplied four professors of anesthesia.

Clearly, we have shown that anesthesia can have broad relationships, and it does indeed cut across not only many clinical fields but also across several basic science disciplines, to its own enrichment.

Personnel and training

More than sixty persons are occupied full time in the Department of Anesthesia. Of these, there are twenty physicians and fifteen nurses occupied primarily with clinical activities. We can be required to cover thirty-four operating rooms simultaneously. This includes the Massachusetts Eye and Ear Infirmary and the McLean Hospital. Some 19,000 anesthesias are administered each year. In the past 10 years the time spent in actually administering anesthesia has increased 90 percent, as shown by a careful study of the Department's code card system.

Three to five physicians at various times are concerned chiefly with the laboratory. We usually have three foreign doctors in training in the Department. Two of the most important individuals on our staff serve as part-time consultants. They are, as mentioned, Frederick Mosteller, Associate Professor of Mathematical Statistics, and Christian Anfinsen, lately succeeded by Claude Villee, Assistant Professors of Biochemistry in Harvard University. Their importance to the Department has been commented upon elsewhere in this report.

Because of the crowding of surgery into a relatively small part of the day, anesthetists with comparatively few ward duties need other activities to occupy their time. Laboratory or clinical research work fills this need for several of the staff and about half of the residents. Research by the advanced residents is neither encouraged nor discouraged. When undertaken, it is carried out in addition to full-time clinical duties. Those with a real flair for it are given whatever facilities they need. The work produced by these men can hold its own with work produced by full-time investigators. From the point of view of teaching, our goal is to inculcate in these men first-hand knowledge of what a well-designed and exactly-controlled project should be, whether in laboratory or in clinical research.

In comparison with surgery, the techniques of anesthesia are relatively simple and can be mastered by two years of faithful application. We do not agree that the three years required by some training centers are necessary. We have a pretty good opportunity to judge the soundness of this view and of our training in general, since we rotate some of our men through four other hospitals where we can compare them with men from other departments. The two most important rotations are through the Children's Hospital in Boston (Dr. Robert Smith) and the Children's Hospital in Philadelphia (Dr. Margery Deming).

The six different groups of trainees have been discussed under the section on Interrelationships.

Quarters

After 14 years of existence, the Anesthesia Department has grown to include more than 60 persons. These individuals overflowed corridor office space, they crowded into the quarters of others, and camped in space not their own. I should like to acknowledge here with heartfelt thanks the discernment and steady support of the Trustees who recognized our ill-housed state, and a year and a half ago authorized the use of departmental funds and supplemented them, so that two floors have been constructed above the Vincent operating rooms in the White Building. There we have six new laboratories, including two sound-proofed constant-temperature rooms, as well-equipped a laboratory for neurophysiological work as there is in Boston, and seven new offices, including a fine conference room where our not large but excellent pharmacology library is housed. These quarters are a convenience and a responsibility.

Financial support

Support became much fuller just after the war, and the rapid growth of the Department of Anesthesia during this post-war period illustrates the fertilizing power of money.

With an annual collected income of about a quarter of a million dollars, the Department operates without cost to the Hospital. More than half of this income is derived from patients' fees and about half from outside sources for the support of the laboratory. Even with conservative figuring, this represents the annual income on more than six million dollars — a substantial addition to the Hospital's resources.

The sources of the funds for the support of the laboratory may be of interest. They are as follows: The writer occupies an endowed chair in Harvard University. The Hospital makes a contribution to his support, as well as to the support of the laboratory.

The Hospital's Committee on Research has on two occasions provided very important help in terms of credit. This is the way it worked: It is not always easy in these days of frenzied finance to get a good investigator lined up simultaneously with a supporting grant. On two occasions the Committee on Research has agreed that the projects in mind and the investigators at hand were worth hanging onto. The Committee agreed to provide funds against the time when a grant could be obtained from outside sources. We have gone ahead and raised the needed funds and the Committee on Research has, essentially without cost to itself, provided important financial support in terms of credit. We hope our credit remains good.

Robust support has come from the United States Army's Office of Research and Development, first under the chairmanship of Colonel William S. Stone and now of Colonel John R. Wood. The Committee on Narcotics and Drug Addiction of the National Research Council, under the chairmanship of Dr. Isaac Starr, has given us not only essential financial backing but also stimulating suggestions; and so, too, have the National Institutes of Health with the firm backing of Dr. Nathan B. Eddy, and in a most important way so, also, has Mr. Edward Mallinckrodt. All have made it possible for us to achieve our present state; all of these institutions and agencies and individuals have our warm thanks.

Notwithstanding our good working quarters, notwithstanding all of the short-term grants we can use soundly, there remains a financial problem of no mean size. We urgently need to be able to make *long-range* plans; we urgently need funds that will make it possible to project our work into the future in a way that will make for maximum productiveness.

In conclusion

We have moved in the past 14 years from the attic of the Bulfinch to our present quarters. We have worked on the central nervous system depressants and have shown how important the hospital is in research in this branch of human pharmacology. We have perhaps helped to clarify the essential role of the hospital in such work. We have established a pattern for the sound and safe appraisal in man of new central nervous system depressants, and are making progress in getting an understanding of the basic mechanisms involved. We have demonstrated the utter dependence of work as broad as this on key consultants. We have passed from the stage of modest resources to generous short-term support, but we still have a grievous need for hard money to make long-range planning possible. We have had some successes and we have made many mistakes, and it would be hard to tell which taught us more. We have as able a group of associates as have ever been assembled for work in this field. And finally, we have shown that all of these activities can be carried on with, indeed are an inseparable part of, a well-rounded training program.

We are grateful for the firm support of the Staff and the Administration. I, personally, should like the Trustees to know how responsible their informed and sturdy support has been for whatever we have accomplished. We have no boastful feeling as we stop to consider the present. We do give recognition to perhaps the only place that could have made this particular type of development possible, the place known all over the world by the three letters, M. G. H.

Henry K. Beecher, M.D.,
Chief of Anesthesia Service

* * *

ANOTHER MGH "FIRST"

On the morning of January 30, 1951 an event of prodigious significance occurred within our walls. Many times since the opening of the Massachusetts General Hospital in 1821 have we been the first to solve a baffling pathologic problem or to demonstrate the successful use of a new technique developed by some member of our staff. But never before in the entire history of M.G.H. —or of mankind, for that matter—has an event of such world-shaking implications taken place anywhere on earth. Here is a brief account of what transpired:

January 30 was a normal winter day. The sky was clear. The wind was SSW and gentle. The barometer read 29.7 and was steady. All was serene in and around the hospital There was no forewarning of what was about to happen. And then — boom! bang! — the THING! Without benefit of contributors, editors, or printer (as was proved conclusively by a thorough questioning and cross-examination by Drs. Clark and Clay of every member of the hospital family — and, of course, no MGH-er's word is *ever* to be doubted) there appeared in the morning mail the now-famous "97A" issue of The News. The paper was consistent in every detail with our regular format (except for a slight alteration of the masthead), but was noticeably superior in the quality of material to our usual publications. The above facts were startling enough in themselves, but when we came to the realization that not only had "97A" published itself with no human participation, but also had folded itself and enclosed itself within addressed envelopes, the event — to us — assumed proportions of the metaphysical and we decided that a swift and expert investigation was indicated.

As soon as the turmoil had somewhat subsided, a hastily assembled committee from our professional staff, headed by Dr. Soutter, was called into extraordinary session behind closed doors. This committee agreed at once that no less a person than the most astute scientist available should be summoned immediately to study the problem. A hurried telephone call to M.I.T. resulted in the appearance, within a matter of minutes, of Dr. Asa Trumps, G.T.H., Pd.Q., Houdini Professor at the Institute, and his able assistant, Dr. Ile B. Darned, Q.E.D.

To the amazement of all who watched and listened, these experts solved the mystery inside the short space of an hour. They recognized at once that the appearance of "97A" during the period of the test explosions in Nevada was no mere coincidence — in fact, their instruments at M.I.T. had registered the likelihood of just such a phenomenon at the time of the second explosion which took place on January 28. To the complete satisfaction of the entire committee, Dr. Trumps proved with his slide-rule that the interval of time between the January 28 explosion and the appearance of "97A", divided by the square root of MGH's polar distance and multiplied by the cosine of the sine, plus the particular type of potentialities released by the second explosion and brought to us on the SSW wind, would inevitably result in such a creation as "97A" and at the very time and place in which it appeared. And thus, again, has M.G.H. another "first" to emblazon upon its escutcheon.

But the end is not yet. Other triumphs are likely to follow. Dr. Trumps has been appointed to our staff as Chief of the newly inaugurated Hogwash Department, and will serve on a 24-hour per day schedule, in order to be on hand in the event of another such manifestation. Reports of any further developments in this field will appear in THE NEWS. In the meantime, Dr. Trumps calls attention to the fact that this type of atomic energy, like lightning, can strike twice in the same place, and he warns every MGH-er to guard assiduously against indulging in any and all questionable thought processes, lest —to such a thinker's embarrassment—his cerebral activities appear in published form on all the desks at M.G.H.

The Board of Trustees, at their meetings on January 12 and 26, voted:

To permit Dr. Farahe Maloof, Assistant in Medicine, to see a limited number of private patients at the hospital.

To appoint:

Dr. Francis G. Barnum as Assistant in Medicine;
Dr. Charles D. Cook as Assistant to the Children's Medical Service;
Mr. Alphonso L. d'Abreu as Visiting Surgeon pro tem, from January 22 to March 5;
Dr. Robert B. Dodd as Assistant Anesthetist, beginning January 1;
Dr. Harry Choa-Hung Fang as Assistant Resident in Psychiatry, beginning July 1;
Dr. Anne P. Forbes as Assistant Physician;
Dr. Emil J. Ganem as Clinical Associate in Urology;
Dr. Melvin J. Glimcher as Third Assistant Resident in Surgery, beginning July 1;
Dr. William R. Harris as Assistant Resident on the Orthopedic Service, beginning July 1;
Dr. William N. Jones as Assistant in Orthopedic Surgery;
Dr. Rita M. Kelley as Assistant in Medicine;
Dr. William V. McDermott as Assistant in Surgery;
Dr. Alexander G. Matoltsy as Research Associate in Dermatology;
Dr. Federico Mora as Third Assistant Resident in Surgery, beginning July 1;
Dr. Remedios K. Rosales as Resident in Neuropathology, beginning January 1;
Dr. Elliott B. Sweet as Assistant Resident on the Orthopedic Service, beginning July 1, 1953;
Dr. Joseph B. Tanner as Assistant Resident on the Orthopedic Service, beginning April 1, 1952;
Dr. D. Vernon Thomas as Assistant Anesthetist, beginning March 1.

At their meetings on January 10, 17, 24, and 31, the General Executive Committee voted:

To accept the resignation of Dr. J. Robert Lyman from the position of Clinical Assistant in Medicine, assigned to the Allergy Clinic;
To change Dr. Lincoln D. Clark's title from Clinical and Research Fellow in Psychiatry, assigned to Anesthesia, to Clinical and Research Fellow in Psychiatry and Anesthesia.

To appoint:

Dr. Anne Godley as Clinical and Research Fellow to the Children's Medical Service;
Dr. Oscar L. Liboro as Clinical Fellow in Surgery, assigned to Endoscopy, from February 1 through April 30;
Dr. Lidio Mora as Clinical and Research Fellow in Medicine, to become effective upon receipt of his temporary license to practise medicine in this State;
Dr. John D. Reid as Research Fellow in Pathology for six months, beginning January 1;
Dr. Walter A. Reif as Fellow in Anesthesia for one year, beginning April 1;
Dr. James E. Simpson as Clinical and Research Fellow in Orthopedic Surgery for six months, beginning December 29, 1950.

ANTIQUE CHINA SALE

As soon as it can be arranged (probably during the second week in March), there will be a sale of the lovely old Onion Pattern and Wedgwood china, formerly used in the Massachusetts General Hospital. Those interested in acquiring souvenir pieces — both useful and decorative — are advised to watch the hospital bulletin boards for date of sale.

STAFF PUBLICATIONS

A recent issue of the *Journal of the American Medical Association* includes a notice which reads, in part:

> The October numbers of the nine specialty journals of the American Medical Association were published with a number of changes which are intended to identify them more closely with the Association and to help meet certain problems facing these journals. The titles of the publications have been changed to include the designation "A.M.A." as part of the title, so that the new titles appear as, for example, *A.M.A. Archives of Surgery* and *A.M.A. Archives of Internal Medicine.* This change was undertaken after consideration by the chief editors of the journals and their editorial boards and the Board of Trustees. . . .
>
> Several inquiries have arisen from libraries regarding the cataloging or indexing of the journals with the new titles. Beginning with volume 49 (January — June 1951) the *Quarterly Cumulative Index Medicus* will list these journals under the new titles, so that the letters A.M.A. will be considered as an integral part of the titles. For the completion of volume 48 (July — December 1950) the *Quarterly Cumulative Index Medicus* will continue to use the old titles without the designation A.M.A. The changes were made before the current volume numbers were completed because of certain production difficulties which required a number of changes in October.

From now on, the titles of the nine A.M.A. specialty journals, when they appear in THE NEWS, will include the new designation. These journals are:

1. A.M.A. American Journal of Diseases of Children
2. A.M.A. Archives of Dermatology and Syphilology
3. A.M.A. Archives of Industrial Hygiene and Occupational Medicine
4. A.M.A. Archives of Internal Medicine
5. A.M.A. Archives of Neurology and Psychiatry
6. A.M.A. Archives of Ophthalmology
7. A.M.A. Archives of Otolaryngology
8. A.M.A. Archives of Pathology
9. A.M.A. Archives of Surgery

Please continue to send your titles promptly to Cora F. Holbrook, Editor of THE NEWS, together with 1) classification of material, 2) title of article, 3) title of publication in which it appears, together with the volume number and page numbers. For books, give the publisher's name and address.

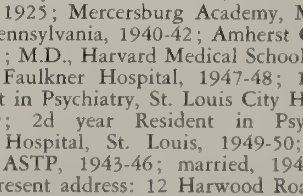
The deadline date for each issue of THE NEWS is the 12th of the preceding month.

All requests for reprints are to go directly to the individual authors, and *not* to Treadwell Library nor to THE NEWS.

The following new title has been submitted — the only one, so far, for 1951:

Ophthalmology

Kinsey, V. E.
The chemical composition and the osmotic pressure of the aqueous humor and plasma of the rabbit.
J. Gen. Physiol. 34:389-402.



BIOGLET

Dr. Frank R. L. Egloff, Assistant Resident in Psychiatry—born in Boston, Massachusetts, July 6, 1925; Mercersburg Academy, Mercersburg, Pennsylvania, 1940-42; Amherst College, 1942-43; M.D., Harvard Medical School, 1947; Intern, Faulkner Hospital, 1947-48; 1st year Resident in Psychiatry, St. Louis City Hospital, 1948-49; 2d year Resident in Psychiatry, Barnes Hospital, St. Louis, 1949-50; U. S. Army: ASTP, 1943-46; married, 1947; two sons; present address: 12 Harwood Road, East Natick, Massachusetts; family home: 6 Westmoreland Place, St. Louis, Missouri.

Dr. William H. Trethowan, Assistant Resident in Psychiatry—born in London, England, June 3, 1917; M.A., M.B., B. Chir., Cambridge University, M.R.C.S., L.R.C.P., Guy's Hospital, 1942; Casualty Officer.

House Physician, and Resident Medical Officer, Guy's, 1943; Lieutenant, R.A.M.C., 1944; Major, Medical Specialist, R.A.M.C., 1946-47; M.R.C.P., Medical Registrar, Guy's Hospital, 1947-48; D.P.M., Psychiatric Registrar, Maudsley Hospital, 1948-50; married; 3 children.

Dr. Lyman C. Wynne, Assistant Resident in Psychiatry—born in Tyler, Minnesota, September 17, 1923; Harvard College, 1941-43; U. S. Army: Yale, Fort Devens, Harvard Medical School, 1943-46; M.D., Harvard Medical School, 1947; Medical Intern, Peter Bent Brigham Hospital, 1947-48; U. S. Public Health Service, Research Fellow in Mental Health at Harvard University, Department of Social Relations, 1948-49; Moseley Traveling Fellow from Harvard Medical School, at the National Hospital for Nervous and Epileptic Diseases, Queen Square, London, England, and the Tavistock Institute of Human Relations, London, 1948-49; Rantoul Fellow in Social Psychology, Harvard Department of Social Relations, 1949; married; one daughter, born in London.

When asked to write something for our column of THE NEWS, my first thought was that the restricted life in a resident training program offered nothing of general interest and the prospect appeared somewhat discouraging, until it occurred to me that out of a year spent as a research fellow in the Yale University School of Medicine I might be able to piece together a picture of that University, over and above the fact that football at Yale appears to be in a somewhat disheartening period of ascendancy over Harvard.

The formal history of the School of Medicine began in 1810 with the founding of the Medical Department—a direct offshoot of Yale College. This placed Yale sixth in the chronological list of Medical Schools in the United States, but local patriot-historians would be quick to point out that the first actual M.D. degree in America, an honorary one, was given by Yale College in 1723 to Daniel Turner, an eminent London physician. Since Dr. Turner's degree had been preceded by a large gift of books to the College, his enemies of that period suggested that the letters stood for "Multa Donavit". Be that as it may, there is little question but that Yale has established a historical priority. However, in self-defense, any Harvard man going to New Haven in the future would do well to read Dr. Turner's acceptance speech which included the interesting remark that he "appreciated it just as much as if it had been from an institution of higher learning"!

The first Professor of the Theory and Practice of Physic, Surgery and Obstetrics was Nathan Smith, who had already founded the Dartmouth Medical School in 1797 and who was the guiding light of the new school at Yale until his death in 1829. Througn the years, standards of teaching and practice were of the highest, and in 1879 the Yale Medical Department placed itself in the front rank, as regards its standards, by introducing a stated matriculation examination and a three-years' graded course, lengthened in 1896 to four years.

The geographical affinity of the present School on Cedar Street and the New Haven Hospital was accompanied by a close integration of the teaching in the clinical and preclinical courses, culminating in the present "full-time" faculty on the clinical as well as preclinical levels. The advantages of proximity are not to be underestimated, and throughout his entire course the student is conscious of the close liaison between the basic sciences and the art of the practice of medicine. Perhaps this accounts for the surprising extent to which the medical students at Yale actively collaborate in the investigative work going on in the various departments.

It would not be possible to write about Yale in this era without referring to the imprint left by the late Dr. Harvey Cushing (*SS* 1896) who spent the years following his retirement from Harvard in 1932 on the faculty of the University where he had begun his education. The intangible evidences of his genius can still be gleaned from the present members of the faculty, so many of whom were his associates; and the Yale Medical Library stands as a commemoration of his tangible contributions to the School. By happy design, this Library was built in the exact center of the Sterling Hall of Medicine—the huge, rambling building which houses the various departments, lecture halls, and laboratories. The donation to the Library of Cushing's great collection of Vesaliana and other incunabula, together with the books of his fellow bibliophile and lifelong friend, A. C. Klebs, has made the historical section one of the most interesting in the world, and a place where, to quote from the lines of George Stewart over the fireplace, one "may freely take and know the rich companionship of others' ordered thought." Since this Library was Cushing's dream during his years at Yale, it is fitting that the core and center of the building which forms a Y, is a Rotunda which was given by his classmates in his memory.

These rambling comments obviously have not produced any very clear picture of the School of Medicine as it exists today, but the names of Long, Lindskog, Peters, Fulton, Blake, Harvey, Gardner, Greene, and others, suffice to indicate the work which is going on. Merely a list of names, however, fails dismally in conveying the general atmosphere which is one of stimulation, interchange, and cooperation. Like any University town or city, life is pleasant, activities endless, and friendliness universal. The Connecticut countryside is beautiful in the spring and fall, and the Sound is close in the summer. Harvard and the M.G.H. are well represented on the Yale faculty by Drs. Salter, Bill Glenn, Wister Meigs, and others, so it is not an entirely strange and foreign land.

If I have communicated any of the nostalgia which writing these lines has evoked, perhaps someone else on the House Staff will be stimulated to head south on the Wilbur Cross Parkway and spend as enjoyable and stimulating a year as I did.

William V. McDermott, Jr., M.D.,
Resident in Surgery

[Dr. McDermott has been appointed Assistant in Surgery on our Visiting Staff since he wrote the above article. *Editor*]

MASSACHUSETTS EYE & EAR INFIRMARY

The Infirmary feels deeply the loss of Henry W. Porter, member of the Board of Managers, who died on January 29 after a short illness. Mr. Porter was a member of the Executive Committee, and also Chairman of the Medical Social Service Advisory Committee, the Public Relations Advisory Committee, and the Industries Committee for Fund Raising. Since 1945 he has been a wise counselor and helpful friend to the Infirmary.

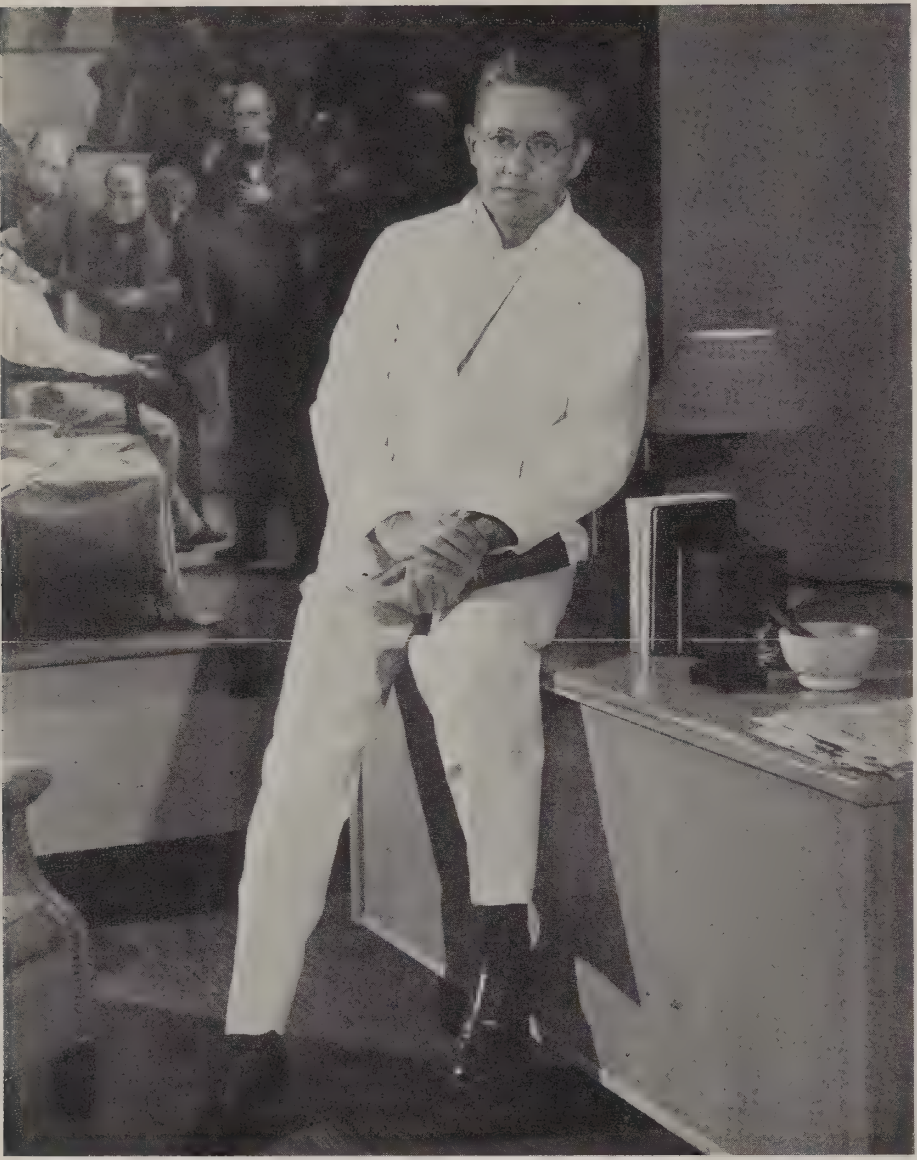
Mr. Porter's family requested that, instead of flowers for his funeral services, donations be sent to the Infirmary, where a memorial to him will be incorporated into the Building Fund.

The Department of Ophthalmology has inaugurated new duties for the Senior Eye Resident. Hereafter he is to be called the Chief Resident. His mornings will be devoted to assisting the surgeons at private operations. In the afternoons he will be assigned to the Retina Service, to examine patients with Dr. Schepens. He will also act as a consultant to other residents who have problems on their services, and will arrange for the biweekly instructional talks to the residents.

Dr. David D. Donaldson read a paper on the "Radiation cataract in experimental animals" at the quarterly meeting of the Bio-Medical Program Directors of the U. S. Atomic Energy Commission, held February 21 in New York City. The paper covers recent investigations in this field, done in collaboration with Dr. David G. Cogan, Director of the Howe Laboratory. It includes a report on work done in X-radiation and neutrons (atomic bomb and cyclotron). The study seeks to determine how much radiation produces cataracts in experimental animals and, ultimately, in humans.

At the January 12 eastern meeting of the Triological Society, held in Philadelphia, Dr. Francis L. Weille, Surgeon in Oto-Laryngology, spoke on "Surgical problems involved in the removal of glomus-jugulare tumors". Dr. LeRoy A. Schall, Chief of the ENT Service, Dr. Moses H. Lurie, Surgeon in Oto-Laryngology, and Dr. George Kelemen, Assistant Surgeon in Oto-Laryngology, gave a paper on "The embryonic hearing organ after maternal rubella".

Dr. Lyman G. Richards, Surgeon for Bronchoscopy and Esophagoscopy, was



No. 31 in a series of Staff photographs
Dr. Henry K. Beecher, Chief of Anesthesia, in his new quarters

interviewed on television on January 15, as a representative from a Red Feather Service. Dr. Richards's topic was "Foreign bodies in the esophagus", illustrated by X-rays and instruments used in the removal of the foreign objects. He repeated his talk at the Annual Meeting of the Board of Managers, held February 14.

Dr. Edwin B. Dunphy, Chief of the Eye Service, read a paper before the Detroit Ophthalmological Society on January 25. His subject was "External eye disease — its relations to constitutional disease".

New addresses:—

Dr. Mariano M. Alimurung (*past gr. stud. Cardiology*), Santo Tomas University Hospital, Manila, P.I.
Dr. Harry A. Durkin (*CM* 1915 & *WM* 1917), 102 North St., Peoria, Ill.
Dr. Boy Frame (*M* 1949), Medical Dept., Grace New Haven Community Hospital, New Haven, Conn.
Dr. W. Philip Giddings (*WS* 1939), 528 Main St., Bennington, Vt.
Dr. R. Earle Glendy (*a.r.p.* 1934), Suite 218, 920 S. Jefferson St., Roanoke, Va.
Lt. Hermes C. Grillo, MC, USNR (*S* 1948), Chelsea Naval Hospital, Chelsea, Mass.
Lt. Robert W. Hopkins, MC, USNR (*S* 1948), Chelsea Naval Hospital, Chelsea, Mass.
Dr. Gale H. Keyes (*M* 1947), 74-21 260th St., Glen Oaks Village, Floral Park, N. Y.
Dr. John McL. Morris (*ES* 1941), c/o Dr. Hans L. Kottmeier, Radiumhemmet, Stockholm 60, Sweden.
Dr. Louis Nathan (*Or.* 1930), 475 Commonwealth Ave., Boston, Mass.
Dr. Robert M. O'Brien (*Or.* 1941), 4161 Lindell Blvd., St. Louis 8, Mo.
Dr. Tracy J. Putnam (*ES* 1923), 450 N. Bedford Drive, Beverly Hills, Calif.
Lt. Edgar J. Schoen, MC, USNR (*CM* 1950), U. S. Naval School of Aviation Medicine, Pensacola, Fla.
Major Donald W. S. Stiff, MC, USAR (*r.p. R* 1950), 141st General Hospital, APO 1005, San Francisco, Calif.
Lt. Weldon W. West, MC, USAR (*S* 1948), Brooke General Hospital, San Antonio, Tex.

Brief bits:—

Dr. Bradford Cannon, Assistant Surgeon on our staff, gave two lectures recently at the University of Kansas Medical Center on "Tissue transplantation" and "Repair of open wounds".

Dr. Edwin F. Cave, Visiting Orthopedic Surgeon at M.G.H., has returned from a trip to Los Angeles and Chicago. On January 23 he addressed the Postgraduate School of the University of California on "Injuries to the knee". In Chicago, on January 29, he spoke before the Annual Meeting of the American Academy of Orthopedic Surgeons on "The use of intramedullary nails in pathologic conditions of the femur".

Harold Emrich, until recently Chief Accountant at the hospital, has been called back into military service as an MP at Fort Sam Houston, San Antonio, Tex. Before coming to the hospital, five years ago, he had served for five years with the U. S. Army in both the European and Pacific Theatres.

Dr. Edward M. Greene (*EM* 1889) adds the note "Age 90" on his subscription renewal card for The News. Dr. Greene and Dr. Hardy Phippen are the only two living alumni of the Class of 1889. Everyone who read it still remembers that amusing letter of Dr. Greene's, in our March 1948 issue, which recounted some of the doings at M.G.H. when he was a House Officer.

Dr. C. Guy Lane, a member of our Board of Consultation, says that much of his professional mail is being sent to his Marlborough Street apartment. He has asked us to announce that his office address is still 416 Marlborough.

Major Roy W. Leeper (*r. D* 1950) returned to active duty in the Army on December 16, as Chief of Dermatology and Syphilology at Murphy Army Hospital. He says the Dermatology Ward has 36 beds which are occupied primarily by frostbite cases. He does not expect this to be his permanent station, and says he will notify us of future moves.

Dr. Tracy B. Mallory, Chief of Pathology, is back at work after a long illness.

Dr. Arrigo Poppi of the medical faculty of the University of Bologna has returned to Italy after having spent several months in the Cardiac Laboratory as a Fulbright Fellow. Dr. Poppi was well known to many members of the 6th General Hospital because of his hospitality to them during their sojourn in Bologna during World War II.

This letter from Dr. Somers H. Sturgis (*ES* 1933) arrived soon after the Great Event.

To the Editor of "97A":

Congratulations! Not even when I was an editor of the *Lampoon* did we achieve quite such a shocking, whimsical, *and* humorous hit! No explanation! Not even April 1! I enjoyed every bit of it! But why? Was it the war in Korea? No matter—it was AI.

I miss everybody at the M.G.H. How could I help it after 20 years, man and boy? Started interning in 1931.

The Brigham is a busy beehive of intense activity. Lots of fun. With much gratification to me, I was recently promoted to Assistant Clinical Professor of Gynecology at Harvard.

The News has always been swell! Keep it up.

Dr. Anthony T. Licciardello (*M* 1948) wrote us the following letter on January 14.

Since leaving the M.G.H. I have been pleasantly engaged in medicine at the V.A. Hospital in Newington, Conn., as Intermediate and now Chief Medical Resident. The work has been good, material plentiful, and instruction excellent. Trudy and I live in a Quonset hut on the hospital grounds amidst a very congenial group of doctors, wives, and numberless children. We have none of our own to report as yet.

Have just received orders to go to Lovell General Hospital at Fort Devens, so The News may be mailed to that station. It is difficult to leave these secure surroundings for the uncertainties of Army life, but perhaps things will be eventful enough to warrant a longer letter at some future date.

We are looking forward to having The News follow us, wherever we may be.

THE NEWS

Boston, Mass. ONE HUNDREDTH ISSUE April 1951

One of the greatest civilizing influences in the world is communication. Our troubles with Russia are, in large measure, due to the fact that the American people cannot communicate with the Russian people. Newspapers are among the important means of communicating. When any community grows beyond the point at which any of its members can easily communicate verbally with any other of its members, it needs a newspaper of some sort.

When the Massachusetts General Hospital opened its wards in September 1821 it had a population of 11 doctors, 1 house officer (house officers were called apothecaries until 1828), a mere handful of non-professional employees, and only 1 patient on September 3, with not another application for admission until September 20. Today it has over 450 doctors on the visiting staff, 120 fellows, more than 100 members of the house staff, about 25 clinical assistants, 360 full-time graduate nurses, 390 nurses in training, nearly 1,000 beds, and about 1800 non-professional personnel. Then, in addition, there are bed patients now averaging over 650 per day, with out-patient visits approximating 700 daily. In other words, today M.G.H. is a microcosm of souls.

Obviously, for such a community a newspaper is a necessity. The M.G.H. now has two: *The News* and *The World*, the latter directed more especially toward our non-professional personnel.

As is not unusual under such circumstances, several abortive attempts were made to start hospital newspapers here before *The News* got under way in 1942. A publication, called the *Bulletin*, was issued from December 10, 1913 through July 1, 1926. It was a small 7" x 4¾" affair, sometimes filling only three pages. There were 34 issues in all. Then, in May 1928, another publication titled the *M.G.H. News*, of approximately the same dimensions as the present paper, was started. For most of its life there were only two issues a year—spring and autumn numbers. It was discontinued with the autumn 1931 issue, in "the interests of economy".

The combination of the Archives Room with *The News* headquarters has proved a happy one. Both enterprises owe their founding in large measure to the late Dr. Frederic A. Washburn.

The News got going well during World War II days under the editorship of Helen Boyer. Since 1944 Cora F. Holbrook has been its able editor, and under her devoted care it has steadily grown in both intellectual and physical stature.

On this occasion of its 100th issue all members of the hospital family can take great satisfaction that our hospital possesses such a worthy and excellent organ.

J. H. Means, M.D.,
Chief of Medical Services

HOW FIRM A FOUNDATION

When your children ask their fathers in time to come, saying, What mean ye by these stones? Then ye shall answer them. . . .

—*Joshua* 4: 6-7

The Massachusetts General Hospital was incorporated by legislative action on February 25, 1811. The Asylum for the Insane was opened on October 6, 1818. The cornerstone of the General Hospital in Boston was laid on July 4, 1818 and the hospital opened on September 1, 1821.

These prosaic statements give no indication of why or how the Massachusetts General Hospital came into being, yet it is obvious that great need for such an institution existed, that this need was recognized, and that powerful forces were called upon to meet it. This is the story of the founding of the hospital, as told by the original documents.

In the year 1839 the Reverend John Bartlett, pastor of the Second Congregational Church in Marblehead for twenty-eight years, wrote the following letter in response to an inquiry from his son, Dr. John S. Bartlett of Boston. The letter is in our Archives collection.

Marblehead, Mass.
Friday Eve 29, 1839

My dear son,

You ask me to state what I remember of my agency in the commencement of the Massachusetts Hospital and of the McLean Asylum. I believe I have told that the first measures in the very earliest stage of that concern originated with me. From Nov. 3, 1807 to 1810 I was chaplain at the Almshouse in Boston. Dr. Jno. Gorham was the physician of the staff the first and part of the second year of my residence, and Dr. Parker (son of the Bishop) the rest of the time. You know that I was ever interested in your profession, and having there a fine opportunity of indulging my taste, I pursued the study of it from the mere love of it. Much of my time was devoted to the sick, but the portion of the diseased which most interested me was the insane. There were generally from 10 to 20 in the house, and although the care was taken of them, which the circumstances of the house would afford, yet there was no proper place for their confinement and rest, a 20-foot building, with several cells opening into a long entry, in each of which cells was a board cabin or berth, with loose straw, a pail for necessary purposes, was their only accommodation. The violent were confined in strait jackets, and the filth and wretchedness of the place were dreadful. At that time there were no places of refuge for the insane in Massachusetts except in a few private houses in the country, owned and managed by Doctors, such as Willard's of Uxbridge, etc., etc. The mode of managing the insane then was most cruel and unfavorable to recovery. Whipping, etc., was often resorted to (not at the Almshouse) but in these country places. The physicians at the Almshouse were humane, good men, but the subject of insanity they did not appear to understand; or rather, no facilities were afforded them for the employment of those moral remedies, which Pinel and others had so successfully applied in France. This wretchedness of this class of patients and their miserable condition in the Almshouse moved my feelings exceedingly. I gave my mind intensely to the study of the causes and remedies of mania in its various kinds. I went to Philadelphia, N. York, examined the hospitals there, read Pinel and all the accounts I could procure of the Asylums in France, and England. I became deeply convinced of the importance of a similar Asylum in Massachusetts. What prompted me to action was, several persons of respectability seized suddenly deranged, and brought to the Almshouse, were put in these cells. Among others, a Capt. Jones seized suddenly on Change violently deranged. He was a stranger, commander of a vessel, and instantly put into a strait jacket, and locked up in one of these cells.

I sat down to my desk and wrote from 15 to 25 billets addressed to some of the wealthiest and most respectable gentlemen of Boston, requesting them to meet at Conant Hall on the Monday evening following, to take into consideration the importance of adopting some measures for the establishment of a Hospital for the Insane. Among these gentlemen were Sam Smith, Barney Smith, Francis D. Channing, Esq., Thomas Perkins, Col. Joseph May, Drs. J. C. Warren, James Jackson, Jno. Gorham, several others. They met agreeably to notice. Inquired who called them together and why. I gave a representation of the sad condition of the insane, the need of an Asylum, etc. They listened with interest and agreed that something should be done. They adjourned to the next Monday, when they met and formed themselves into a society for the purpose. At these meetings I was Secretary. They adjourned for another week. When they met Doctors Warren, and Jackson, and Gorham suggested the Expediency of uniting with this object, the establishment of a Hospital for the sick. Some fears were expressed that by proposing too much, neither object could be obtained. Consequently, subscriptions were first solicited for the Insane Hospital. Lt. Gov. Phillips subscribed $20,000.

At this third meeting, I observed to the Gentlemen that as I was a young man and little known, it would be better that some other more known should be chosen Secretary. Accordingly they chose Mr. Codman (Richard, I think), son of Stephen Codman, Esq.

Yours in haste,
J. Bartlett

The above letter, written twenty-one years after the opening of the Asylum for the Insane, gives us a graphic picture of the deplorable condition of the mentally ill and sick poor as witnessed by Bartlett during the early 1800's; and so deeply was he disturbed by the suffering of these unfortunates that he called together the group of distinguished Boston citizens, mentioned above, to discuss with them means of remedying the situation.

A letter, recently discovered in the John Collins Warren papers (Vol. VI), now in the Massachusetts Historical Society, establishes the date of the second meeting as March 8, 1810. This letter reads as follows:

Boston, March 9th 1810

Dear Sir,

At the request of a number of gentlemen assembled at Vila's Hall the last evening I communicate to you their proceedings.

Voted—That a Committee be appointed to consider & report on the expediency of establishing a General Hospital for the reception of the Sick, Lunatics & pregnant Women, who may need such an Asylum.

Voted—That Doct. John Warren
Hon. John Phillips
Peter C. Brooks, Esq.
Sam'l Smith, Esq.
Docts. James Jackson
John C. Warren
John Gorham be a
Committee for this purpose.

Permit me, Sir, in behalf of the Gentlemen who assembled, respectfully to solicit your attention to this important subject.

Yours resp^{y}.
John Bartlett, per order

Doct. John Warren

There is this superscription in the hand of John Collins Warren, "Vote of a committee on the subject of a Hospital. 1st proposition."

This committee met. They gave their "attention to this important subject". Action passed into the hands of men of great local influence: John Phillips, twelve years later the first mayor of Boston; Peter C. Brooks, then probably the wealthiest man in the city; and other prominent citizens.

Others, even earlier, had recognized the want of a hospital in Boston. "Thomas Boylston, Esq., by will dated Nov. 12, 1798, proved in 1800, made the town of Boston his residuary devisee in trust, among other objects, to erect a small-pox hospital and a lunatic hospital. The testator was, unfortunately, a member of the firm of Lane, Frazier, and Company, of London, which became insolvent. Hon. William Phillips, by a codicil dated April 18, 1797, proved in 1804, bequeathed the sum of five thousand dollars to the town of Boston for this object."*

So the time was ripe for the issuance of the famous letter of Drs. Jackson and Warren.

Boston, August 20, 1810.

Sir,—It has appeared very desirable to a number of respectable gentlemen, that a hospital for the reception of lunatics and other sick persons should be established in this town. By the appointment of a number of these gentlemen, we are directed to adopt such methods as shall appear best calculated to promote such an establishment. We therefore beg leave to submit for your consideration proposals for the institution of a hospital, and to state to you some of the reasons in favour of such an establishment.

It is unnecessary to urge the propriety and even obligation of succouring the poor in sickness. The wealthy inhabitants of the town of Boston have always evinced that they consider themselves as "treasurers of God's bounty;" and in Christian countries, in countries where Christianity is practised, it must always be considered the first of duties to visit and to heal the sick. When in distress, every man becomes our neighbor, not only if he be of the household of faith, but even though his misfortunes have been induced by transgressing the rules both of reason and religion. It is unnecessary to urge the truth and importance of these sentiments to those who are already in the habit of cherishing them,—to those who indulge in the true luxury of wealth, the pleasures of charity. The questions which first suggest themselves on this subject are, whether the relief afforded by hospitals is better than can be given in any other way; and whether there are, in fact, so many poor among us as to require an establishment of this sort.

The relief to be afforded to the poor, in a country so rich as ours, should perhaps be measured only by their necessities. We have, then, to inquire into the situation of the poor in sickness, and to learn what are their wants. In this inquiry, we shall be led to answer both the questions above stated.

There are some who are able to acquire a competence in health, and to provide so far against any ordinary sickness as that they shall not be deprived of a comfortable habitation, nor of food for themselves and their families; while they are not able to defray the expenses of medicine and medical assistance. Persons of this description never suffer among us. The Dispensary gives relief to hundreds every year; and the individuals who practise medicine gratuitously attend many more of this description. But there are many others among the poor, who have, if we may so express it, the form of the necessaries of life, without the substance. A man may have a lodging; but it is deficient in all those advantages which are requisite to the sick. It is a garret or a cellar, without light and due ventilation, or open to the storms of an inclement winter. In this miserable habitation, he may obtain liberty to remain during an illness; but, if honest, he is harassed with the idea of his accumulating rent, which must be paid out of his future labours. In this wretched situation, the sick man is destitute of all those common conveniences, without which most of us would consider it impossible to live, even in health. Wholesome food and sufficient fuel are wanting; and his own sufferings are aggravated by the cries of hungry children. Above all, he suffers from the want of that first requisite in sickness, a kind and skilful nurse.

But it may be said, that instances are rare among us, where a man, who labours, with even moderate industry, when in health, endures such privations in sickness as are here described. They are not, however, rare among those who are not industrious; and who, nevertheless, when labouring under sickness, must be considered as having claims to assistance. In cases of long-protracted disease, instances of such a description do occur amongst those of the most industrious class. Such instances are still less rare among those women who are either widowed, or worse than widowed. It happens too frequently that modest and worthy women are united to men who are profligate and intemperate, by whom they are left to endure disease and poverty under the most aggravated forms. Among the children of such families also, instances are not rare of real suffering in sickness. To all such as have been described, a hospital would supply every thing which is needful, if not all they could wish. In a well-regulated hospital, they would find a comfortable lodging in a duly attempered atmosphere; would receive the food best suited to their various conditions; and would be attended by kind and discreet nurses, under the directions of a physician. In such a situation, the poor man's chance for relief would be equal perhaps to that of the most affluent, when affected by the same disease.

There are other persons, also, who are of great importance in society, to whom the relief afforded by a hospital is exceedingly appropriate. Such are generally those of good and industrious habits, who are affected with sickness, just as they are entering into active life, and who have not had time to provide for this calamity. Cases of this sort are frequently occurring. Disease is often produced by the very anxiety and exertions which belong to this period of life; and the best are the most liable to suffer. Of such a description, cases are often seen among journeymen mechanics and among servants.

Journeymen mechanics commonly live in small boarding-houses, where they have accommodations which are sufficient, but nothing more than sufficient, in health. When sick, they are necessarily placed in small, confined apartments, or in rooms crowded with their fellow-workmen. They are sheltered from the weather, and have food of some sort; and these must, in many cases, be the extent of their accommodations. Persons of this description would do well to enter a hospital, even if they had to pay the expense of their own maintenance. In most cases, they would suffer less, and recover sooner, by so doing. When, as sometimes happens, they have not the means of payment, they become objects of charity; and the welfare of such persons should be considered among the strong motives in favour of establishing a hospital.

Servants generally undergo great inconveniences, at least when afflicted with sickness, and oftentimes much more than inconveniences. With so much difficulty is the care of them attended in private families, that many gentlemen would pay the board of their servants at a hospital, in preference to having them sick in their own houses. In some cases, however, neither the master nor servant can afford the expense of proper care in sickness. Not uncommonly, a young girl is taken sick in a large family, where she is the only servant. She lodges in the most remote corner of the house, in a room without a fireplace. The mistress is sufficiently occupied with the unusual labours which are thrown on her at a time perhaps when she is least fitted to perform them. Under such circumstances, how can the servant receive those attentions which are due to the sick? Of what use is it that the physician leaves a prescription to be put up at the Dispensary? He goes the next day, and finds that there has not been time even to procure the remedies which he had ordered; meanwhile, the period in which they would have been useful has passed by, and the incipient disease of yesterday has now become confirmed.

Persons of these descriptions would not be disposed to resort to a hospital on every trivial occasion. But, when afflicted with serious indisposition, they would find in such an institution an alleviation of their sufferings, which it must gladden the heart of the most frigid to contemplate.

There is one class of sufferers who peculiarly claim all that benevolence can bestow, and for whom a hospital is most especially required. The virtuous and industrious are liable to become objects of public charity, in consequence of diseases of the mind. When those who are unfortunate in this respect are left without proper care, a calamity, which might have been transient, is prolonged through life. The number of such persons, who are rendered unable to provide for themselves, is probably greater than the public imagine; and, of these, a large proportion claim the assistance of the affluent. The expense which is attached to the care of the insane in private families is extremely great; and such as to ruin a whole family that is possessed of a competence under ordinary circumstances, when called upon to support one of its members in this situation. Even those who can pay the necessary expenses would perhaps find an institution, such as is proposed, the best situation in which they could place their unfortunate friends. It is worthy of the opulent men of this town, and consistent with their general character, to provide an asylum for the insane from every part of the Commonwealth. But if funds are raised for the purpose proposed, it is probable that the Legislature will grant some assistance, with a view to such an extension of its benefits.

Of another class, whose necessities would be removed by the establishment of a hospital, are women who are unable to provide for their own welfare and safety in one of nature's most trying hours. Houses for lying-in women have been found extremely useful in the large cities of Europe; and, although abuses may have arisen in consequence, these are such as are more easily prevented in a small than in a large town.

There are many others who would find great relief in a hospital, and many times have life preserved when otherwise it would be lost. Such especially are the subjects of accidental wounds and fractures among the poorer classes of our citizens; and the subjects of extraordinary diseases, in any part of the Commonwealth, who may require the long and careful attention of either the physician or surgeon.

It is possible that we may be asked whether the almhouse does not answer the purposes for which a hospital is proposed. That it *does not,* is very certain. The town is so much indebted to the liberality of those gentlemen who, without compensation, superintend the care of the poor, that we ought not to make this reply without an explanation. The truth is that the almshouse could not serve the purpose of a hospital, without such an entire change in the arrangements of it as the overseers do not feel themselves authorized to make, and such as the town could not be easily induced to direct or to support.

The almshouse receives all those who do not take care of themselves, and who are destitute of property, whether they be old and infirm, and unable to provide means of assistance; or are too vicious and debauched to employ themselves in honest labour; or are prevented from so employing themselves by occasional sickness. This institution, then, is made to comprehend what is more properly meant by an almshouse, a bridewell or house of correction, and a hospital. Now, the economy and mode of government cannot possibly be adapted at once to all these various purposes. It must necessarily happen that in many instances the worst members of the community, the debauched and profligate, obtain admission into this house. Hence it has become, in some measure, disreputable to live in it; and, not unfrequently, those who are the most deserving objects of charity cannot be induced to enter it. To some of them, death appears less terrible than a residence in the almshouse.

It is true that the sick in that house are allowed some greater privileges and advantages than are extended to those in health; yet the general arrangements and regulations are, necessarily, so different from those required in a hospital, that the sick—far from having the advantages afforded by the medical art—have not the fair chance for recovery which nature alone would give them. Most especially they suffer for the want of good nurses. In these officers must be placed trust and confidence of the highest nature. Their duties are laborious and painful. In the almshouse, they are selected from among the more healthy inhabitants; but, unfortunately, those who are best qualified will always prefer more profitable and less laborious occupations elsewhere. It must, then, be obvious that the persons employed as nurses cannot be such as will conscientiously perform the duties of this office.

In addition to what has already been stated, there are a number of collateral advantages that would attend the establishment of a hospital in this place. These are the facilities for acquiring knowledge, which it would give to the students in the medical school established in this town. The means of medical education in New England are at present very limited, and totally inadequate to so important a purpose. Students of medicine cannot qualify themselves properly for their profession, without incurring heavy expenses, such as very few of them are able to defray. The only medical school of eminence in this country is that at Philadelphia, nearly four hundred miles distant from Boston; and the expense of attending that is so great, that students from this quarter rarely remain at it longer than one year. Even this advantage is enjoyed by very few, compared with the whole number. Those who are educated in New England have so few opportunities of attending to the practice of physic, that they find it impossible to learn some of the most important elements of the science of medicine, until after they have undertaken for themselves the care of the health and lives of their fellow-citizens. This care they undertake with very little knowledge, except that acquired from books;—a source whence it is highly useful and indispensable that they should obtain knowledge, but one from which alone they never can obtain all that is necessary to qualify them for their professional duties. With such deficiencies in medical education, it is needless to show to what evils the community is exposed.

To remedy evils so important and so extensive, it is necessary to have a medical school in New England. All the materials necessary to form this school exist among us. Wealth, abundantly sufficient, can be devoted to the purpose, without any individual's feeling the smallest privation of any, even of the luxuries of life. Every one is liable to suffer from the want of such a school; every one may derive, directly or indirectly, the greatest benefits from its establishment.

A hospital is an institution absolutely essential to a medical school, and one which would afford relief and comfort to thousands of the sick and miserable. On what other objects can the superfluities of the rich be so well bestowed?

The amount required for the institution proposed may, at first sight, appear large. But it will cease to appear so, when we consider that it is to afford relief, not only to those who may require assistance during the present year or present age, but that it is to erect a most honourable monument of the munificence of the present times, which will ensure to its founders the blessings of thousands in ages to come; and when we add that this amount may be raised at once, if a few opulent men will contribute only their superfluous income for one year. Compared with the benefits which such an establishment would afford, of what value is the pleasure of accumulating riches in those stores which are already groaning under their weight?

Hospitals and infirmaries are found in all the Christian cities of the Old World; and our large cities in the Middle States have institutions of this sort, which do great honour to the liberality and benevolence of their founders. We flatter ourselves that in this respect, as in all others, Boston may ere long assert her claim to equal praise.

We are, sir, very respectfully, your obedient servants.

James Jackson.
John C. Warren.*

The result of this letter was a petition by James Bowdoin and others to the Legislature. The next document from which we can quote is the "Report of the Committee of both Houses of the Massachusetts Legislature, to whom was referred the petition of James Bowdoin and others, praying for the aid of the Government in the establishment of a General Hospital."

COMMONWEALTH OF MASSACHUSETTS

The Committee of both Houses, to whom was referred the petition of James Bowdoin and others, praying for the aid of the Government in the establishment of a *General Hospital,* for the reception of sick and insane persons, have attended that service, and beg leave, respectfully, to state, for the consideration of the Legislature, the principal objects of the proposed institution, the nature of the aid solicited from the Government, and the most prominent advantages, which, in the opinion of your Committee, would accrue to the Commonwealth, from granting the prayer of the petition.

A number of opulent and charitable citizens of Boston and the vicinity (among whom are the petitioners) having contemplated the advantages which have resulted to other countries, and to some of our sister states, particularly New-York [sic] and Pennsylvania, from the establishment of similar institutions, have been long desirous of raising a fund, by private subscription, for this benevolent purpose. They wait only for the countenance and patronage of the Legislature, in laying a foundation for such an establishment, as a signal to commence their operations, and to proceed in the execution of their humane and honourable project.

It is contemplated by the petitioners, that the proposed Hospital shall be erected in the vicinity of the metropolis, in some healthy and retired situation, on a plat of ground sufficiently extensive to afford air and exercise for patients of every description, and for the erection of all necessary offices, connected with the institution; that the scite [sic] of these buildings shall be so remote from the town, as to be exempted from the confusion of a large and populous city; and yet so near as to insure the best medical assistance, and the advantages to be derived to the community from improvement in medical science.

The Hospital, thus established, is intended to be a receptacle for patients *from all parts of the Commonwealth,* afflicted with diseases of a peculiar nature, requiring the most skilful treatment, and presenting cases for instruction, in the study and practice of surgery and physic.

Among the unfortunate objects of this charitable project, particular provision is to be made, for such as the wisdom of Providence may have seen fit to visit with the most terrible of all human maladies— *a deprivation of reason.*

For the accommodation of *lunatic* and *insane persons,* an arrangement is intended, either by the erection of a separate building, or by appropriating different wards in the same building, detached in such a manner as will effectually guard against the injuries resulting from an indiscriminate communion with patients of a different description.

From the information which your Committee have received, as to the result of experiments in the cities of New York and Philadelphia, as well as from the opinions of professional gentlemen, of the highest reputation and most extensive experience, your Committee are fully convinced a *Lunatic Hospital* may be conveniently and advantageously connected, with one for the reception of other patients. While, therefore, every possible comfort and relief, which the most skilful practice and attentive nursing can afford, is to be extended to a class of patients, comparatively few, and whose long continuance in a Hospital, exclusively devoted to them, would necessarily limit the advantages of such an institution, the circle of charity is to be more widely extended, by embracing all whose bodily diseases and situation in life, may render them proper subjects of admission to a *General Hospital.*

Your Committee think it unnecessary to attempt a precise enumeration of *all,* who are contemplated by the petitioners to come within the scope of their project. Persons of every age and sex, whether permanent inhabitants of the town, or occasional residents therein, citizens of every part of the Commonwealth, as well as strangers, from other states and countries, those in indigent circumstances, who, while in health, can gain by their labour a subsistance [sic] for themselves and families, but, when assailed by disease are deprived of the ordinary comforts of life, and by such privations become the victims of disorders, which would yield to salubrious air, suitable medicine and regimen, accompanied by the united efforts of the physician and the nurse, these are among that wretched portion of the community, for whom it is intended to open a tranquil and comfortable asylum.

Of the persons thus enumerated, your Committee are assured, by the most respectable authority, that one in three who annually die, might, by proper accommodations, skilful treatment, and faithful nursing, in all probability, be snatched from the grave, and restored to health and usefulness in society. But it is not to the indigent alone that the advantages of this institution are to be extended. Experience in other states has proved, that persons requiring the best surgical and medical aid, and having the means of defraying the moderate expenses incident to such a situation, will frequently, from choice, resort to a Hospital, as furnishing the most convenient accommodations, and the surest means of restoration to health.

This brief exposition of the benevolent views of the petitioners, it is confidently hoped, will satisfy an enlightened Legislature, that the project is not the result of a narrow and selfish policy, intended to secure to the inhabitants of the metropolis, local privileges and advantages, at the expense of the Commonwealth.

When it is considered how great a portion of the population of the town of Boston, is composed of mechanics, journeymen and apprentices, labourers, and domestic servants, mere sojourners in the city, with no connections near at hand, ready to pour oil and wine into their wounds, when they are in need of relief, it cannot be doubted, that the plan of a general hospital, is the offspring of a liberal and expansive benevolence, ranging far beyond the confines of a single town, and seeking for objects of solace and comfort, among the whole family of man!

As to the aid which the petitioners solicit from the Legislature, your Committee are fully satisfied it is by no means beyond the importance of their object and for which the Commonwealth will forever receive, a most ample equivalent, in the public advantages to be derived from the proposed institution.—They ask for an act of incorporation, to enable them to manage their funds in such a manner, as to ensure the success of their project.—They ask, also, for a grant of the Province house, the value of which may be estimated at from thirty to forty thousand dollars. This estate, it is well known, has long been unproductive, and is daily diminishing in value.

By the terms of the proposed grant, according to the request of the petitioners, it is not to take effect, until the sum of one hundred thousand dollars, shall have been raised by private subscription or donation. This sum, it is well ascertained, will be furnished by the voluntary contributions of the petitioners, and other opulent individuals, who are zealously engaged in the project, and who are ready to erect the superstructure, whenever the corner stone shall have been laid by the Commonwealth. Although this sum, with the proposed grant, would not be adequate to the perfect accomplishment of the plan, yet no reasonable doubt can exist, that the progressive accumulation of the fund, from the munificence of other individuals, who will be eager to "go and do likewise," will ensure its speedy and effectual execution.

Among the paupers in the alms-house, in the town of Boston, who are chargeable to the Commonwealth, there are, at this time, fifty five [sic] invalids, who are supported at the rate of one dollar and fifty cents per week, making, in the whole, an *expence* of *four thousand two hundred and ninety dollars per annum.* Were the proposed Hospital now in operation, most of these patients would be at once transferred to it, where they would be attended without any charge to the government, and an annual expenditure, from the public treasury would thus be saved, far exceeding the interest of the property proposed to be granted.

When it is considered how many sick and disabled paupers are supported in other parts of the Commonwealth, at the charge of the Government, who would be entitled to a place in this general asylum, and how rapidly this expence is increasing, by the constant influx of foreigners, it is believed the most rigid calculation will warrant the inference, that the proposed appropriation would be a gain to the treasury, and an alleviation of the burdens of the people.

In this view of the subject, the petitioners may be considered, as rather soliciting for an opportunity to give to the public, than as requesting a grant for mere local advantage, or individual emolument.

The immense benefits to be derived from a General Hospital, as a school for improvement in surgery and physic, are too obvious to require illustration. It is well understood that for want of such an institution, many students belonging to Massachusetts, resort annually to New-York [sic] or Philadelphia, for the completion of their medical education. The location of the proposed Hospital, is intended to be such as will accommodate students in the metropolis, and at the University in Cambridge, and the skill thus acquired, by the increased means of instruction, will be gradually, and constantly diffused, through every section of the Commonwealth.

Influenced by these considerations, and deeply impressed with the belief, that the object of the petitioners is highly honourable to themselves, and would conduce to the glory of the Commonwealth; contemplating the permanent nature of the intended institution, and reflecting that it is the duty of enlightened Legislators, to provide not only for the present generation, but to be active and vigilant in advancing the happiness of their posterity, your Committee most cheerfully accord with the benevolent wishes of the petitioners, and report that they have leave to bring in a bill, conformable to the prayer of their petition; which is respectfully submitted by

WM. KING, *Per Order.*

Although not officially dated, this report was undoubtedly prepared in 1810. It was an admirable document, except for the argument that the establishment of a private charitable hospital would relieve the public treasury of the just expense of caring for indigent patients; one hundred forty years later we find the Legislature of Massachusetts following this same procedure. Private charity is still called upon to subsidize public responsibility.

The bill referred to in the report of the Committee was presented and passed on February 25, 1811, in the following form:

An Act to incorporate certain persons, by the name of

The Massachusetts General Hospital

Sect. 1. *Be it enacted by the Senate and House of Representatives in General Court assembled, and by the authority of the same,* That James Bowdoin, John Adams, Elbridge Gerry, Theophilus Parsons, William Gray, John Thornton Kirkland, Harrison Gray Otis, Christopher Gore, William Eustis, William Phillips, John Quincy Adams, Henry Dearborn, Levi Lincoln, Isaac Parker, Joseph B. Varnum, George Cabot, Perez Morton, Thomas Dawes, Thomas Hazard, jun., Thomas Cutts, Israel Thorndike, Matthew Bridge, Samuel Brown, James Perkins, David Tilden, John Lowell, Samuel Dana, Joseph Story, William King, Samuel Fowler, Marshall Spring, Thomas H. Perkins, Thomas C. Amory, Benjamin Bussey, Aaron Hill, William Heath, Thomas Kittredge, James Prince, Benjamin Greene, Thomas Melville, Joseph Collidge, Elias H. Derby, John C. Jones, Jonathan Davis, Jonathan Harris, James Mann, Timothy Childs, Daniel Kilham, Benjamin Crowninshield, Arnold Welles, Jonathan Amory, Robert Hallowell, Andrew Cragie, John Warren, Richard Sullivan, and William Payne, together with such other persons as may hereafter be admitted members of the Corporation hereinafter created, according to the By-laws thereof, be, and they hereby are incorporated and made a body corporate and politic, by the name of THE MASSACHUSETTS GENERAL HOSPITAL, and by that name may sue and be sued, and shall have and use a common seal, to be by them devised, altered, and renewed at their pleasure.

Sect. 2. *And be it further enacted,* That the said Corporation may take and receive, hold, purchase, and possess, of and from all persons disposed to aid the benevolent purposes of this institution, any grants and devises of lands and tenements, in fee simple, or otherwise, and any donations and bequests, and subscriptions of money, or other property, to be used and improved for the erection, support, and maintenance of a General Hospital for sick and insane persons. *Provided,* that the income of said Corporation, from its real and personal estate together, do at no time exceed the sum of thirty thousand dollars. [This last proviso was stricken out by amendment in 1886, Chapter 131.]

Sect. 3. *And be it further enacted,* That it shall be in the power of the Legislature of this Commonwealth, or of any committee or officer, duly appointed by them for that purpose, to introduce into the said Hospital, all such lunatic and sick persons as may hereafter be chargeable to this Commonwealth, and who would otherwise receive support and medical and other necessary aid and assistance at the expense of the public Treasury, as soon as said Hospital may be in readiness, and to have provided for them therein suitable apartments, bed-clothing, board, and nurses, and the most skilful medical advice, free of all cost to the Commonwealth, and at the sole charge of the funds of the Corporation. *Provided,* the whole number of patients so received into said Hospital, at the request of the Legislature, or of officers appointed by them for that purpose, shall at no one time exceed thirty, unless the Trustees of said Corporation shall consent to the admission of a further number of the State's poor. [Repealed and substituted, 1813, Chapter 42, Sec. 1, which provided that the Corporation should appropriate from its funds for the support of these persons an amount equal to simple interest on the money received from the sale of the Province House. Furthermore, this obligation was entirely wiped out by Resolves of Massachusetts, 1815, Chapter 171. Vol. VII, p. 163.]

Sect. 4. *And be it further enacted,* That in consideration of the obligation aforesaid imposed upon said Corporation in the foregoing section, the estate commonly called the Old Province House, with all the lands under and appurtenant to the same, be and are hereby given and granted unto said Corporation in fee simple, to be sold at the discretion of said Corporation, and the proceeds thereof to be held and applied, as a foundation of a General Hospital. *Provided, however,* that before such sale shall be made, the said Corporation shall give bond to the Treasurer of this Commonwealth, with surety or sureties, to be approved of by His Excellency the Governor and Council, for the time being, that the proceeds of said sale, with the interest thereon, shall be paid into the Treasury, for the use of the Commonwealth, within five years from the passing of this act, unless an additional sum of one hundred thousand dollars shall have been raised and provided by private subscriptions or donations, other than grants from the Commonwealth for the purposes of this act. [Amended 1813 and 1815, allowing until Feb. 25, 1821 to raise the money and making the raising of $100,000 the sole condition to be applied to the sale of the Province House.]

Sect. 5. *Be it further enacted,* That the said General Hospital shall be under the direction and management of twelve Trustees, who shall be chosen annually, and shall remain in office until others are chosen and qualified in their stead; four of which Trustees shall be chosen by the Board of Visitors, and the remaining eight by the Corporation aforesaid. [Amended 1819 and finally in 1864, Chapter 46, that the four Trustees are to be appointed by the Governor with the consent of the Council.]

Sect. 6. *And be it further enacted,* That the said Corporation may, at their first or any subsequent meeting, choose all necessary and convenient officers, who shall have such powers and authorities as the said Corporation may think proper to prescribe and grant to them, and who shall be elected in such manner, and for such periods of time, as the by-laws of the said Corporation may provide. And said Corporation may further make and establish such by-laws and regulations, for the internal government and economy of the Hospital, as they may think proper, not repugnant to the Constitution and Laws of this Commonwealth.

Sect. 7. *And be it further enacted,* That the Governor, Lieutenant Governor, the President of the Senate, and Speaker of the House of Representatives, with the Chaplains of both Houses, for the time being, be, and hereby are made and constituted a Board of Visitors of the said Hospital; with authority to visit the same semi-annually, and as much oftener as they may think proper, in order to inspect the establishment, and the actual condition of the sick, to examine the by-laws and regulations enacted by said Corporation, and if they see fit to disallow and annul the same, and generally to see that the design of the institution be carried into effect, in a careful, tender and effectual manner; and especially to see that the State has its full proportion of patients in the Hospital, as provided in the third section of this act, and that the said patients are suitably attended to, and comfortably maintained. [That part allowing the Board of Visitors to annul the bylaws repealed, 1813, Chapter 42.]

Sect. 8. *And be it further enacted, by the authority aforesaid,* That in case of the separation of the District of Maine, and the erection of it into a separate State, pursuant to the provisions of the Constitution of the United States, the amount of the sale of the Province House shall be carried into the estimate, with the other public property of the Commonwealth.

Sect. 9. *And be it further enacted,* That it shall be lawful for the Corporation, at any general meeting of the members thereof, to alter or change the name of said Corporation, either by substituting the name of any distinguished benefactor, who may contribute a sum exceeding the amount given by the Commonwealth, or by adding the name of such benefactor to the name given to said Corporation by this act, in case the sum so given by such benefactor shall not exceed the sum given by the Commonwealth. And upon such change so as aforesaid made, the said Corporation shall have a right to assume and take such name, and shall have, hold and enjoy all the powers and privileges given by this act, notwithstanding such alteration and change.

Sect. 10. *And be it further enacted,* That James Bowdoin, Esq., be and hereby is authorized to call the first meeting of said Corporation, by notification, and therein to appoint the time and place of said meeting: *Provided,* that no notification shall be deemed valid, unless it be published in all the newspapers printed in Boston, for six weeks in succession.

Sect. 11. *Be it further enacted,* That the Legislature shall have power to alter, amend, or repeal this act, whenever they shall be of opinion that the public good may require it: *Provided,* that no such alteration, amendment, or repeal, shall be made in such manner as to revest in the Commonwealth the grant herein made, or the proceeds thereof, after a private subscription for the purposes of this act shall have been actually commenced. (Repeal, 1813, Chapter 42, Sec. 4.)

Sect. 12. *Be it further enacted,* That the said Hospital may be erected in any place not included within the territorial limits of the town of Boston. (Repeal, 1813, Chapter 42, Sec. 4.)

On February 26, 1811 the situation was as follows: The need for and desirability of a hospital had been demonstrated and accepted. Doctors and "opulent citizens" had been interested. The Legislature had passed an Act of Incorporation and the Commonwealth offered to aid the project through a grant of the Province House. However, certain steps remained to be taken. The corporate organization had to be formed and money collected.

The first meeting of the 56 persons named in the Act, who formed the corporation, was held on April 23, 1811. The Honorable John Adams, second President of the United States, was the moderator; Richard Sullivan was chosen secretary; and a committee was appointed to prepare bylaws, which were adopted on July 5. "Trustees were not chosen till Feb. 2, 1813. The Corporation was organized by a President and Vice-President, Treasurer and Secretary; the Secretary being, *ex officio,* Secretary of the Board of Trustees. . . . At the first meeting of the Trustees, Feb. 23, 1813, held at the house of Colonel T. H. Perkins, the draft of an address to the public was read, adopted, and ordered to be printed, 'with a suitable circular letter to every clergyman in the Commonwealth'."*

On January 9, 1814 another very long address to the public, written by President Quincy of Harvard, having been approved by the Overseers of the Poor, was adopted and a committee appointed to solicit subscriptions. The basis of the subscription was announced to be that "no sum subscribed shall be demanded, unless, before Jan. 1, 1815, the sum subscribed by individuals to the institution shall amount to at least a hundred thousand dollars"; but still, in spite of this provision, probably because of the depressed condition of trade in Boston, caused by the War of 1812, "on Jan. 18, 1815, the proposed subscriptions were suspended."*

The reason for the lack of progress between 1810 and 1815 is readily understood when one reviews the history of this period, beginning with the Embargo Act of 1807, its repeal in 1809, followed by the Nonintercourse Act applying to Great Britain and France, and the vacillating foreign policy of the United States, culminating in actual war from June 18, 1812 to 1815. Although the Treaty of Ghent was signed on December 24, 1814, the Battle of New Orleans was fought on January 8, 1815 before the news of the Treaty had reached America. Considering the effect of all this upon New England and its shipping, it is extraordinary that the people of Boston had the courage to proceed as far as they did in the formation of the Corporation and even to contemplate raising one hundred thousand dollars to build a hospital.

In spite of the disruption of war, by April 14, 1816 Boston had recovered sufficiently for the Trustees to order a new address to be drafted, printed, and distributed. A fresh impetus was given to the project in December, when $5,000 was received from the Humane Society for the Insane Hospital. This encouraged the Trustees to order the purchase of the Barrell Place (or Joy Estate) in Charlestown, for the Insane Hospital, to appoint Ward Committees for the collection of subscriptions, and to authorize Mr. Lowell to prepare a new address to the public. Affairs moved rapidly now. On December 29, 1816 the Ward Committees reported that in three days the subscriptions were $78,802; by January 5, 1817 they reached $93,969. The present site of the General Hospital on Allen Street was purchased on March 30, 1817, and on April 6 Drs. Samuel Danforth, Isaac Rand, John Jeffries, Lemuel Hayward, David Townsend, Thomas Welch, Aaron Dexter, and William Spooner were chosen Consulting Physicians; Dr. James Jackson, Acting Physician; and Dr. John C. Warren, Acting Surgeon.

Altogether there were 1047 subscribers; 245, by giving $100 or more, became members of the Corporation. William Phillips gave $20,000. "The importance of this donation can hardly be over-estimated. It encouraged the friends of the project, and awakened a corresponding liberality in others."*

The present hospital seal was prepared and adopted on November 30, 1817, "the device being an Indian with his bow in one hand, and an arrow in the other; and on his right a star, being encircled with the inscription, 'MASSACHUSETTS GENERAL HOSPITAL, 1811'."*

Early in this year, 1817, the Trustees had presented a petition to the Legislature which resulted in the following resolve, passed June 12, 1817:

Resolved, That the stone to be employed in the erection of the Massachusetts General Hospital shall be hammered and fitted for use, so far as the same can be done, by the convicts at the State Prison of this Commonwealth, in such manner as the Trustees of said Institution for the time being, or their agent, may request, free of expense to said Corporation, as soon as may be, after such stone shall be delivered at said Prison wharf, for that purpose: *Provided,* that nothing herein contained shall be so construed as to prevent or retard the fulfilment of any existing contract for stone work, with any other person or persons whatever. And provided, also, that the materials to be worked shall be delivered free of expense to the Commonwealth, at such part of the Prison limits as the Warden may direct, and removed from thence when directed by the Warden, also free of expense to the State. (Resolves of Mass., 1817, Chapter 25, Vol. VII, p. 418.)

Encouraged by this generous action of the Legislature, the Trustees ordered on December 7, 1817 that the Hospital be built "of stone, and *of that kind called granite.*" Granite is a hard, enduring stone and Chelmsford granite which the Trustees chose seems to be especially hard. One cannot help sympathizing with the convicts who had to "dress" this resistant material. By another resolve passed in 1824, we learn that the cost of this convict labor was $4,176.43 and that it was borne by the Commonwealth.

"On Saturday, the 4th of July [1818], the corner-stone of the Hospital in North Allen Street, in pursuance of the vote of the Trustees, was laid in Masonic form by the Grand Lodge of Massachusetts, in presence of his Excellency the Governor, his Honor the Lieutenant-Governor, the Honorable Council, many charitable societies, the Selectmen and Board of Health of the town of Boston, the members of the Corporation of the Massachusetts General Hospital, and a great concourse of citizens, who assembled to witness the ceremony.

"Under the stone was placed, in addition to a number of coins, a silver plate or tablet, whereon was engraved the following inscription:—

"The Corner-stone of this Edifice,
DESIGNED AS A GENERAL HOSPITAL, FOUNDED BY THE MUNIFICENCE OF
THE COMMONWEALTH OF MASSACHUSETTS, AND OF MANY OF ITS LIBERAL CITIZENS, WAS LAID AT THE REQUEST OF THE TRUSTEES
OF THE MASSACHUSETTS GENERAL HOSPITAL,
BY THE GRAND LODGE OF
MASSACHUSETTS,

FRANCIS J. OLIVER, Esq., Grand Master.
His Excellency JOHN BROOKS, Governor.

His Honor WILLIAM PHILLIPS, Lieut.-Governor, President of said
Corporation, and a most munificent donor.

The Municipal and Military Officers of Boston assisting at the Ceremonies;

THIS FOURTH DAY OF JULY, A.D. MDCCCXVIII. AND OF THE INDEPENDENCE OF THE UNITED STATES, XLIII.
ANNO LUCIS, 5818."*

During the preceding two years work had been going on to prepare the Barrell Place and on October 6, 1818 the first patient was admitted to the Asylum. In 1823 John McLean bequeathed to the hospital $25,000 payable on the death of his widow, and also made the hospital his residuary legatee. The residue amounted to over $90,000. As a result, this unit of the Massachusetts General Hospital was designated by vote of the Trustees in 1826 as the McLean Asylum.

On September 1, 1821 the Bulfinch Building was finished, the doors were opened, and two days later the first patient was admitted. After ten years of labor the Massachusetts General Hospital was ready to begin, in full, its mission—to care for the sick and the insane, to assist in the education of those engaged in this care, to encourage study into the cause, amelioration, and prevention of disease, and to set an example of the practice of all these functions.

Nathaniel W. Faxon, M.D.,
Director Emeritus

RESEARCH BUILDING DEDICATION

May 16, 1951

May 16 is a very important date on our MGH calendar of events, for at that time our new Research Building will be dedicated. Approximately 10,000 invitations to the ceremony will be sent out. Each contributor to the Building Fund will be invited to attend.

The morning exercises will be held in the OPD Amphitheatre. The program, as completed to date, includes the following speakers and the subjects of their addresses:

10:00-10:15 Dr. William H. Sweet. "Uses of nuclear disintegration in the diagnosis and treatment of brain tumor".

10:15-10:30 Dr. A. Baird Hastings. "Observations on the effects of ions and hormones on carbohydrate metabolism".

10:30-10:45 Dr. Fritz A. Lipmann. "Some observations on metabolic effects of the thyroid hormone".

10:45-11:00 Dr. Brown M. Dobyns. "The behavior of human thyroid tumors transplanted to the anterior chamber of the guinea pig's eye".

11:00-11:15 Dr. Paul C. Zamecnik. "Studies on intermediary metabolism of the rat hepatoma".

11:15-11:30 Dr. Henry K. Beecher. "The perception and measurement of pain".

11:30-11:45 Dr. William T. Salter. "Inotropic (digitalis-like) action of blood serum on the myocardium".

11:45-12:00 Dr. Francis O. Schmitt. "Fibrogenesis of certain connective tissues constituents in vitro".

12:00-1:00 Sir Charles R. Harington. The Edward P. Richardson Lecture.

The afternoon exercises on the Bulfinch lawn will begin at 2:30. Mr. Francis C. Gray, Chairman of our Board of Trustees, will extend the greetings of the Board to the assembled guests. The speakers on the afternoon program will be Dr. James R. Killian, Jr., President of Massachusetts Institute of Technology and a member of the Scientific Advisory Committee of the hospital, Sir Charles Harington, Director of the National Institute of Medical Research, England, and Dr. Dean A. Clark.

The Research Building will be open for tours during the entire day.

The following Massachusetts General Staff Associates Committee was appointed by the Board of Trustees on December 29, 1950, in accordance with the nominations submitted as a result of the balloting by the hospital Staff:

For the Trustees
Mr. Francis C. Gray
Mr. Phillips Ketchum
Mr. Ralph Lowell

For the Staff
Dr. Miles P. Baker
Dr. Marshall K. Bartlett
Dr. Edward F. Bland
Dr. Robert R. Linton
Dr. Richard H. Sweet
Dr. Howard Ulfelder
Ex officio
Dr. Dean A. Clark

The purpose of this Committee is to continue the study of the problem of the formation of a professional group at the hospital.

The Vincent Club is putting on its annual production, the 1951 Vincent Show, on April 4—7 at New England Mutual Hall, for the benefit of the Vincent Memorial Hospital. The Show this year will be a cavalcade of show business from 1900 to the present day.

Tickets are on sale at the Box Office, New England Mutual Hall, 225 Clarendon Street, weekdays from 9:30 to 5:30 and on Saturdays from 10 to 4.

The Board of Trustees, at their meetings on February 7 and 23, voted:

To accept the resignation of Dr. Augustus S. Rose with regret and congratulations on his new position;

To grant leave of absence to Dr. Carl W. Gottschalk, Assistant Resident in Medicine, from February 1 to April 1, for special service in the armed forces.

To appoint:

Dr. Roger R. M. Borghgraef as Fellow in Anesthesia, to carry on the duties of an Assistant Resident in Anesthesia for one year, beginning July 1, 1953;

Dr. Edward D. Churchill as Chairman of the Committee on Research;

Dr. Fa-Chi Dunn as Assistant Resident in Dermatology, beginning July 1;

Dr. Kurt Leonhardt as Fellow in Anesthesia for one year, beginning April 1;

Dr. H. Eugene Patterson as Assistant Resident on the Children's Medical Service from February 1 to October 1;

Dr. Samuel R. Schuster as Third Assistant Resident in Surgery, beginning July 1;

Dr. Peter E. Sifneos as Assistant Resident in Psychiatry, beginning January 1, 1952;

Dr. Rhett Talbert as Assistant Resident in Neurology for six months, beginning July 1, 1951, and as Resident in Neurology, beginning January 1, 1952.

At their meetings on February 14 and 21, the General Executive Committee voted:

To promote Dr. Lawrence J. Barrows to the position of Resident in Neurology for six months, beginning July 1;

To change Dr. John J. Cranley, Jr.'s title from that of Clinical and Research Fellow in Surgery to that of Clinical Assistant in Surgery.

To appoint:

Dr. Raymond Adams to the position of Clini-

cal Fellow in Neurology for one year, beginning July 1;
Mr. Raymond S. Quick as Research Fellow in Physics, assigned to the Radiological Department for one year, beginning April 1;
Dr. Jaimie S. Rodriguez as Clinical and Research Fellow in Medicine, effective as of December 15, 1950;
Dr. Gordon D. Winchell as Clinical Assistant in Medicine.

* * *

Contributions amounting to $507 were received by The News during 1950. This amount, over and above the regular subscription fee, was donated toward the support of the paper. A note of appreciation is always sent to each contributor when his check arrives, but we thought you might like to know the total amount of these contributions for the year.

DOROTHEA GANO LOOFBOUROW

I have been asked to try to give concrete form to the feelings of many people who would like to express their admiration for Dr. Dorothea Loofbourow, a member of the Medical Staff of this hospital from 1944 until her death on January 31. This has become easier to do as the little expressions of admiration and affection have multiplied. Although it is ironic comfort, one of the effects of death is to enable the living to grasp, through the accumulation of small tributes which, singly, seem feeble, the full significance of the life which has ended.

Those who knew her remember especially the time and patience she gave to anyone whom she felt she could help. Several members of the staff have spoken of her willingness to stay long after hours at clinic, in order to see patients who worked and could not come at other times. Another, less orthodox, aspect of her medical work was her ability to feel genuine interest in the personal problems of her patients, and in this characteristic she perhaps unusually resembled the old family physician. When she died, one of her clinic patients wrote, "I considered her a real friend, and now I have lost her. She always called me 'Sophie' when it came my turn to see her at the Hypertension Clinic. You would not think such a simple gesture could make me feel so proud and happy." One of the most striking reactions among her patients was the feeling of personal possession: each one felt that he knew her better than anyone else.

As a person she was both extremely vital and very feminine. "My doctor was a woman! A little bit of a woman!" writes one patient; and it is interesting that she never lost this quality in a predominantly masculine profession. The same patient remarks about her integrity—her inability to assume a mask—and it was, perhaps, this quality which led her to use rather than hide her femininity. Tenderness, tact, patience, and tartness were all utilized to help her patients as fully as she was able to do. The constant eagerness which characterized her was the delicate but unquenchable source of her energy—an energy which often was supplied by pure will, for she was not a strong woman. Her sudden death, preceded by no long period of illness, was the only conceivable one for her: a flame that was, and suddenly is no more. For those who remain, there is left the memory of her warmth and inner strength.

M. M.

LAWRENCE RAYMOND MORRISON

1897 - 1950

Ray Morrison was a sensitive, brilliant man with great courage and singleness of purpose. He wanted to be a neuropathologist; for this he trained himself thoroughly and at this he worked throughout his all-too-few professional years. The tragedy of his untimely death at fifty-three, in the midst of his greatest creative work, was unexpected and sudden. It was the end of his twenty-year fight against tuberculosis. Stricken in 1931, just as he was getting into his stride as an investigator, he was unable to work for four years and underwent many thoracic operations. In 1935 he was able to take up part-time teaching and research, but this was interrupted by much illness and more surgical treatment. He gradually gained strength, so that from 1940 until his death he was able to work full time as an experimental neuropathologist at the Massachusetts General Hospital and teach neuropathology at the Harvard Medical School. Only those who worked with him knew how his marvelous enthusiasm for his work lifted him above pain and fatigue. His shy manner and dry humor were sometimes surprising opposites in his complex character. He worked in a special field, but easily learned new methods from others. Little went on in the hospital and in the world about him that he did not see. He enjoyed reading and art, and could draw well. He was married to Hazel Simmons in 1929. A daughter was born in 1930 and a son in 1931. They lived in Brookline and spent their summers at Sheffield in the Berkshire Hills.

Morrison was born in West Springfield, Massachusetts, in 1897. He attended Tufts College (1920) and then Tufts Medical School, where he graduated as Doctor of Medicine in 1924. He had a general internship at St. Luke's Hospital in New Bedford, and a year of psychiatry at the Danvers State Hospital. He then began his special training by working for six months under Barrett at the Psychopathic Hospital in Ann Arbor, Michigan. In 1926-27 he spent a year in Ferraro's laboratory at the Psychiatric Institute in New York City. The following year he held the Laan Fellowship at the University of Utrecht in Holland. There he worked on anatomy under Winkler and pathology under Radimaker. This was a great stimulus, and he always spoke with happiness of the experience and with admiration for Professor Winkler. Returning to America in 1929 he took up his life's work, teaching neuropathology at the Harvard Medical School and running the histological laboratory of the Neurological Unit at the Boston City Hospital, where he became Neuropathologist in 1930. A year later came his illness. On returning to work he transferred his research to the laboratories of the Massachusetts General Hospital, where he carried on his investigations up to the time of his death. From 1929 to 1941 he was an Assistant in Neuropathology at the Harvard Medical School. In 1941 he was advanced to Instructor and in 1948 to Associate. Although his bibliography consists of only fifteen titles, it is remarkable in that it shows the consistency of his effort to do fundamental research along experimental lines. It also shows the long-range manner in which he outlined problems and carried them through. Each of his publications is a real monograph and is of a high standard of excellence. He never published anything trivial or "preliminary".

His first paper(1) was a description of the work done with Ferraro in New York during 1926 and 1927. It was an investigation of the effect of illuminating gas upon the cells of the central nervous system, and turned his interest toward experimental work and the effects of anoxia, trends which strongly influenced his later investigations. The following year he was enjoying his "Wanderjahr" in Holland, and in Winkler's laboratory produced an important anatomical study(2) showing a tract from the pallidum to the reticular formation of the brain stem. His interest in the demyelinating disorders became apparent shortly after his return to Boston, by his work with Putnam (5)(6) on experimental sclerotic plaques, his study(3) of the effects of electric shock upon the brain, and especially his important description(4) of the role of the oligodendroglia in myelinogenesis. It was just as he was developing new methods for this research that he fell ill.

Returning to research just before the war, his interest in the effects of oxygen deprivation on the brain led to his being chosen to investigate for the Navy the cerebral effects of anoxia in a quantitative way. Qualitative work had been done before, but he first showed(7) what sort of lesions appeared, and where, after producing known amounts of asphyxia for measured periods of time. It was a laborious investigation, including physiological and chemical determinations along with histopathological observations.

His last five years Morrison devoted to two related lines of research—the investigation of the neuropathology of rheumatoid arthritis and the effects on the nervous system of allergic reactions. He showed that a disseminated encephalomyelitis could be produced in animals by the use of homologous antigens(9) and was tracking down the part played by enzymes(10) in such phenomena. His latest paper on immunological aspects of encephalomyelitis(11) is now in press. This work represents an original and hopeful attack upon the obscure problem of the etiology of such diseases as multiple sclerosis.

In relation to arthritis he worked for years as neuropathological adviser to Dr. Walter Bauer's laboratory group. This resulted in a general paper(8) outlining the problem in 1947. To evaluate the post-mortem changes, he found it was necessary to know just what changes occurred in the spinal cord with advancing age. Morrison therefore prepared as controls specimens from 50 spinal cords of persons aged from 10 to 90, and described and photographed the changes in nerve cell, axon, myelin, glia, and connective tissue. This makes a unique book which will soon be brought to completion. In the post-mortem study of many arthritic patients he had found nodular inflammatory lesions in the interstitial tissues of nerve and muscle. This material(13) is also being prepared for publication. In addition, he was making preparations of synovial cells stained by DaFario's method to see whether there was any relation between the secretion of synovial tissue and the Golgi apparatus.

At the time of his death Morrison was still in the midst of all this activity, enthusiastic and always pushing himself to the limit of his strength. His loss is a very real one to Science. His friends and colleagues have lost a companion of rare quality.

OCCUPATIONAL MEDICINE CLINIC

The Occupational Medicine Clinic began its work on February 1, 1949, supported by a grant from the National Institute of Health. The grant provides funds for out-patient and in-patient study of appropriate clinical material thought to be job-related. No surgical cases are accepted, and dermatological material is accepted only for consultation for diagnostic opinion.

The Massachusetts General Hospital has taken an interest in diseases of industrial origin since 1913, when Dr. David L. Edsall formed an Industrial Clinic. From that time on, until late in the twenties, cases thought to be of industrial origin were seen in the Out-Patient Clinic, with considerable interest on the part of the house staff, visiting physicians, and Social Service Department under Miss Ida M. Cannon's direction. Dr. Wade S. Wright was actively in charge of this work. During the 1920's definitive work on lead poisoning was done at this hospital under the direction of Dr. Joseph C. Aub, supported by funds from the lead industries. With this background, it has been quite natural for interest in occupational diseases to be renewed. Dr. Faxon and Dr. Means have given generously of interest and support in launching the work that is now going on under the title of the Occupational Medicine Clinic. In spite of the restrictions on Federal funds for peacetime research, it is very gratifying to be able to report that funds are to be available in 1951, as previously. In launching this activity, an Advisory Committee was set up, the membership of which is as follows: Drs. Joseph C. Aub, Earle M. Chapman, Dean A. Clark, Nathaniel W. Faxon, Francis T. Hunter, Donald S. King, C. Guy Lane, Arthur L. Watkins, and Alton S. Pope, Deputy Commissioner of Public Health. The group is called together only once a year, but advice and help from the individual members is generously available when needed.

The Occupational Medicine Clinic is greatly benefited by a close liaison with the Division of Occupational Hygiene of the Massachusetts Department of Labor and Industry. The chemists and engineers are able, in field and laboratory studies, to evaluate exactly the qualitative and quantitative hazard in the individual case under study. With such data, correct occupational etiology can usually be established. Also, unusual cases, or groups of cases, come to light through the activities of the Division of Occupational Hygiene. Dr. Harriet L. Hardy, now in charge of the Occupational Medicine Clinic here at Massachusetts General Hospital, serves in a consultant capacity on the staff of this division of the Department of Labor. When problems in diagnosis of chest disease arise, cases are frequently referred to the Department of Physiology of the Harvard School of Public Health for certain tests of pulmonary function. This liaison has grown to be of great mutual interest and will undoubtedly expand as cases are referred to the Occupational Medicine Clinic following community and industrial chest surveys. From time to time the special skills of members of the Department of Biology at the Massachusetts Institute of Technology are enlisted. For example, the study of tissue for the presence of potentially toxic dusts, such as talc, by means of X-ray diffraction or polarizing light is used to identify refractal crystals in biopsy or autopsy material. This type of joint effort will undoubtedly grow as special problems are presented by ever-changing industrial operations.

The work of the Occupational Medicine Clinic divides itself into three categories. On Wednesday mornings Dr. Hardy is in the Out-Patient Medical Clinic and sees cases that have been referred by outside physicians, unions, State agencies, lawyers, or members of the hospital staff for study. This activity has been slow in growing, but at present an average of two cases each week are seen. The cases may be diagnostic problems sent in from Community Chest X-ray surveys or State tuberculosis sanitoria. There are problems in differential diagnosis sent in from visiting physicians who are considering possible industrial etiology of anemias, liver disease, and vague gastrointestinal disturbances, such as may be produced by chronic lead intoxication. It is hoped that this out-patient work will expand. Dr. Earle Chapman is planning to assign a fourth year medical student to help study such cases as might be worth while in the teaching of the problems of occupational disease.

The second phase of Occupational Medicine Clinic activity is the in-patient work, which depends upon the clinical material that presents itself. The presence of certain industries in this community — such as storage battery manufacturing, fluorescent lamp manufacturing, artificial leather industry, and, during the war years, the manufacturing of explosives — determines the kinds of cases that appear for study. Cases of chronic beryllium poisoning from fluorescent lamp manufacturing continue to present themselves, even though beryllium was discontinued in the making of fluorescent lamps in May 1949. The study of this disease is of great interest and importance, because of the seriousness of the prognosis, the widespread systemic effects in affected individuals, and the continuing appearance of new cases. Since it was discovered that ACTH and cortisone have a transient brilliant success as therapy in the treatment of beryllium disease, the Occupational Medicine Clinic has participated in the attempt to understand and evaluate the usefulness of these materials. One case was studied in cooperation with Dr. Albright's group in the Mallinckrodt Ward, in order to collect complete and accurate metabolic data. A study of two cases of lead poisoning at this hospital, and two at the

Veterans Hospital in West Roxbury (in collaboration with Dr. Ronald C. Bishop, recently a member of the Massachusetts General Hospital house staff), has been undertaken to determine whether or not citrate salts are, as has been claimed, successful in the treatment of this disease. A small interesting series of cases of pneumoconiosis has been thoroughly studied, with the help of basic pulmonary function testing, at the Department of Physiology of the Harvard School of Public Health. An attempt has been made to treat such cases with intermittent oxygen therapy under pressure, as suggested by Dr. Motley and his group at Jefferson. This is a worth-while project in rehabilitating men with chronic respiratory disease to the point of returning at least one of these men to more active employment.

A third and important activity of the Occupational Medicine Clinic is to answer consultations in all parts of the Massachusetts General and in other hospitals in this community and in those near by. This service creates and increases interest in diagnosis and brings to light proper problems for clinical investigation in the field of occupational disease. There have been more than thirty such consultations in the past year, and it is hoped that this type of activity will grow as it becomes known that such service is available.

Dr. Hardy was invited by the Royal Society of Medicine in London to read a paper last September on the subject of beryllium intoxication. She spent six weeks in Europe visiting hospitals and universities which are interested in occupational medicine, and plants and governmental agencies concerned with worker illness. She spent a month in Wales, Scotland, and England, and made brief visits to Sweden, Holland, and Belgium. The new World Health Organization was visited to discover what plans are being made for the collection of data concerned with occupational disease from various countries and for the dissemination of such information, together with the authority and means of preventing worker illness. The trip was of great professional benefit, especially in view of the fact that in the European countries the tradition in the field of occupational medicine is considerably older and is dignified by excellent clinical attention. In general, the American interest has been in measuring toxic materials and developing engineering devices for protecting the worker against these materials, with very little interest in knowledge of the clinical effects of industrial insults. Dr. Hardy presented the information gathered on the problem of beryllium intoxication to the scientists at Harwell, which is the atomic energy laboratory in England. She also gave a lecture on the medical aspects of radiant energy at the Institute for Public Health in Stockholm, and presented similar material before a medical staff meeting of the Leiden Clinic at the invitation of Dr. Andries Querido, who recently served for a year as Clinical and Research Fellow on the Medical Staff at the Massachusetts General.

From this description it can be seen that the work of the Occupational Medicine Clinic is a young, enthusiastic attempt to study the problem of etiologic relationship and pathogenesis of insulting exposures in all types of occupations. An important sequel to the investigative and consultative capacity of the Occupational Medicine Clinic is the urge to communicate in informal teaching the existing data and possible implications in clinical medicine of work-acquired intoxications. The problem of discovering appropriate clinical material has not been completely solved. Cases of occupational illness are being solicited with great caution, because of medico-legal complexities, from lawyers, unions, and the Massachusetts Industrial Accident Board. Interest and referrals from members of the Massachusetts General Hospital staff, past and present, will be most welcome. The Occupational Medicine Clinic has an office in old Ward E, and the telephone extension is 820. Consultation requests are gladly answered at any time.

Harriet L. Hardy, M.D.,
Head of Occupational Medicine Clinic

* * *

Dr. J. H. Means was married on February 17 to Carol Lord Butler of Bangor, Maine, daughter of the late Frederick Taylor Lord, M.D., Visiting Physician at the Massachusetts General Hospital from 1912 to 1934 and a member of the Board of Consultation from 1934 until his death in 1941, and of Mabel Clapp Lord, a member of the Ladies' Visiting Committee from 1923 to 1940.

The National Research Council announced in a recent press release:

> It is now definitely known that synthetic compounds—especially methadone and its derivatives, manufactured from readily available domestic chemicals—can do everything that morphine can do in the relief of pain and in other medical usages of morphine.
>
> Among the many scientists who have aided in this work, particular credit is due to Dr. Henry K. Beecher of Harvard Medical School, to Drs. Lyndon Small and Nathan Eddy of the Public Health Service's National Institutes of Health in Bethesda, Maryland, and Dr. Harris Isbell of the Service's Federal Narcotics Hospital at Lexington, Kentucky.

* * *

Brief bits:—

Dr. Walter S. Burrage, Head of the MGH Allergy Clinic, was elected Vice President of the American Academy of Allergy at its annual meeting in New York on February 6.

Dr. Stanley Cobb, Chief of our Psychiatry Service, delivered a lecture at the meeting of the Toronto Academy of Medicine on March 6. His subject was "Some principles and applications of Psychosomatic Medicine".

Dr. Elmer F. Franseen (*j.r.s. Or.* 1947) is practising orthopedics at 20 Maple St., Springfield, Mass., in association with Dr. Parker C. Carson (*r.s. Or.* 1940).

The General Store celebrated its 10th anniversary on March 5. Congratulations for a job well done and best wishes for continued success.

MASSACHUSETTS EYE & EAR INFIRMARY

Miss Helen Patten, Director of the Speech Clinic for the Hard of Hearing Child in the Winthrop Foundation, has recently returned from a visit to Port au Prince, Haiti, where she demonstrated her methods of teaching speech and lip-reading. Miss Patten was the guest of St. Margaret's Episcopal Convent, which runs the only school for handicapped children in Haiti. Cases of cerebral palsy, cleft palates, and blindness are accepted at the school, as well as those of deafness.

Miss Patten spent most of her time training native teachers in the basic fundamentals of speech therapy. She also gave demonstrations to the doctors and health workers of the community, and to the State Health Department.

Dr. David Donaldson, Fellow in Ophthalmic Research in the Howe Laboratory, will leave in mid-April for Japan. He will conduct a survey of the existing radiation cataracts produced by the atomic bombs at Nagasaki and Hiroshima and will make a complete photographic record with his stereoscopic color camera of each stage of cataract development. The Atomic Bomb Casualty Commission of the Atomic Energy Commission is sponsoring Dr. Donaldson's trip and will publish the results of his findings.

Dr. Robert Sinskey, also, will go to Japan. He will examine new groups of exposed persons for potential cataracts. He has just completed a two-months' apprenticeship in the Howe Laboratory, learning Dr. Donaldson's stereoscopic camera technique.

"Retinitis pigmentosa" is the subject of Dr. Bernard Zeavin's research in the Howe Laboratory. A native of Winnipeg and a graduate of the University of Manitoba, Dr. Zeavin has recently been appointed to a year's fellowship in ophthalmic research.

Dr. Daniel E. Martinez of Monterrey, Mexico, started his residency in Oto-Laryngology on March 1. A graduate of the University of Mexico, Dr. Martinez interned at Quincy City Hospital.

The Annual Meeting of the New England Oto-Laryngological Society was held at the Infirmary on Wednesday, March 28. The morning meeting was devoted to clinical presentation of cases from the Infirmary, with Dr. LeRoy A. Schall, Chief of our Oto-Laryngology Service, presiding. A buffet luncheon preceded the afternoon session, which was conducted by Dr. Robert L. Goodale, President of the N.E. Society and Surgeon in

Oto-Laryngology on our staff. Among the items on the program were: Three cases at the Murphy Army Hospital, presented by Lt. Col. A. H. Delman, M.C., Chief of the EENT Section at Murphy; two motion pictures—one on the fenestration operation, presented by Dr. George E. Shambaugh, Jr. of Chicago, and another on tonsillectomy, using a modification of the Davis type mouth gag, presented by Dr. Rudolph E. Swenson of Plymouth, Massachusetts, Assistant in Oto-Laryngology on our staff. The guest speaker for the afternoon was Dr. William Dameshek of Boston, whose subject was "Blood dyscrasias as related to Oto-Laryngology".

STAFF PUBLICATIONS

Titles of the latest publications by members of the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary staffs are listed each month in THE NEWS as a convenience for our readers. For that reason we ask you to send promptly all titles of your latest publications to Cora F. Holbrook, Editor of THE NEWS, together with 1) classification of material, 2) title of article, 3) title of publication in which it appears, together with the volume and page numbers. For books, give the publisher's name and address. The classification of material still continues to be omitted in many instances. It would save your editor considerable time and trouble if you would remember to include that information.

The deadline date for each issue of THE NEWS is the 12th of the preceding month.

All requests for reprints are to go directly to the individual authors, and *not* to Treadwell Library nor to THE NEWS.

The following new titles have been submitted:

Anesthesia

Beecher, H. K.
Early care of the seriously wounded man.
J.A.M.A. 145:193-200.

Beecher, H. K.
Principles, problems, practices of anesthesia for thoracic surgery.
A.M.A. Arch. Surg. 62:206-238.

Beecher, H. K.
Spinal anesthesia (Correspondence).
Surg., Gynec. & Obst. 92:256.

Rudin, D. O., Fremont-Smith, K., and Beecher, H. K.
Permeability of the dura mater to epidural procaine in dogs.
J. Appl. Physiol. 3:388-398.

General Medicine

Benedict, E. B.
Gastritis.
In Current therapy—1951, Philadelphia, W. B. Saunders Co., pp. 199-202.

Oto-Laryngology

Nachlas, N. E.
Rhinolith as a cause of suppurative rhinitis.
New England J. Med. 244:15-16.

Sterility

Simmons, F. A.
Diagnosis and treatment of the infertile male.
In Monographs on surgery—1951, New York. Thomas Nelson & Sons, pp. 267-307.

Miscellaneous

Mosher, H. P.
The expression of the face and man's type of body as indicators of his character.
Laryngoscope 61:1-38.

Books

DeLorme, T. L., and Watkins, A. L.
Progressive resistance exercise: Technic and medical application.
New York, Appleton-Century-Crofts, Inc.

* * *

The following notice concerning Kurt H. Thoma, D.M.D., Chief of our Dental Service from 1943 to 1948 and now a member of our Board of Consultation, was sent to us from the Minneapolis office of *Dental Survey*. It reads:

> Dr. Kurt H. Thoma of Brookline, Massachusetts, is the first dentist to receive a high honor in dentistry in which the recipient was chosen by popular vote of the entire profession.
>
> The Fauchard Medal, for outstanding contributions to dentistry, was presented to the distinguished dental educator and author at the annual banquet of the Pierre Fauchard Academy in the Stevens Hotel, Chicago, on February 3.
>
> The medal winner was named by the Academy on the basis of results of a nation-wide poll conducted in *Dental Survey*, nationally circulated dental monthly. This was the fourteenth presentation of the medal which in previous years was awarded on decision of the Academy board of trustees.
>
> Dr. Thoma, now Professor Emeritus, began teaching in the Harvard Dental School in 1912; he is the author of standard textbooks on oral anesthesia, pathology, surgery, diagnosis, and radiography.
>
> In his acceptance speech, Dr. Thoma paid tribute to Pierre Fauchard (father of modern dentistry, for whom the Academy is named) not only for valuable knowledge and superior technics which he made public, but for the fact that he was willing to share this knowledge for the common benefit at a time when such secrets were jealously guarded for selfish profit and gain. It is through such sharing, continued Dr. Thoma, that dentistry in its many phases has attained its present high level.
>
> In conclusion Dr. Thoma pointed out: "Today a new emergency is with us, requiring preparation for adequate civil defense. The dentist and dental specialist have again the opportunity to take an active part in a true service to the community by organizing for emergency care of injured persons and giving treatment for injuries of the head and face. I am sure Fauchard would not be disappointed in the development of dentistry during this first half of the century."

Dr. Edwards sent us the following article for the House Staff column just before he left last July for a year's leave of absence. Although Dr. Edwards is not here at present, his description of an idyllic vacation may well serve as a suggestion for others who love quietude and nature in the raw. For that reason we give you his article now. *Editor*

In answer to a request for a contribution to the House Staff column, I thought perhaps a description of an enjoyable outing up at the Canadian lakes might be of interest. Two summers ago my wife and I, with our tiny Sealyham pup, drove west to Minnesota and through Duluth to the small town of Ely near the northern border of the state. On the shore of a large lake a few miles outside of town, in a little settlement called Winton, we left our automobile. The French-Canadian manager of "Wilderness Outfitters" on the edge of the lake was expecting us and had complete equipment packed for a two-weeks' trip. This included a canoe, tent, grill, air mattresses, food, and blankets—all of which was included in the reasonable charge of four dollars a day per person.

After loading up, the canoe was towed to the upper end of the lake behind a powerboat, then carried across a four-mile portage on top of what must have been the oldest station wagon in existence. There on the edge of Basswood Lake we took our leave of the driver from "Wilderness Outfitters" and of all vestige of civilization for the next two weeks. As the International Boundary bisects this lake and since most of our time would be spent on the Canadian side, we made our first stop at the Boundary Station on a small island a few miles up the lake. There we purchased our fishing licenses from a lonely Canadian stationed in a tiny hut.

The days that followed were wonderful fun. With complete freedom from rush and worry we paddled from one lake to another, camping when and where we pleased. Sometimes we changed camp site each night, again we stayed for several days in the same location, with short side trips to neighboring lakes for fishing or swimming. Nearly always we picked a small island in the center of a lake for pitching camp, chiefly because of danger from the many bears and moose in the vicinity on the mainland and because we were not allowed to carry a gun into Canada. We saw deer and moose on this trip, but no bear.

This beautiful area lies in Quetico Provincial Park. The land is flat but rocky, with thousands of lakes, usually joined by tiny rivers (so-called), or by short portages. There are no rapids for the "white water" enthusiasts, but the scenery matches any I've encountered, with large jagged boulders partially covered with evergreen forests rising out of the pale blue lakes. The water is cold and clear to a considerable depth. Fish are abundant and usually give an interesting account of themselves before being landed. Wall-eyed pike and pickerel are most common, with an occasional large and powerful muskie. Lake trout are less common but can be found. There are several Indian reservations along these lakes, where the males will dress in their feathers and pose for photographs for a price. Far from being picturesque, these Indians lead an unhealthy existence—living in thatched hovels, each with about a dozen hounds—so we avoided these areas as much as possible.

On previous trips with a group of boys, we had employed a guide. This time, however, we decided to try our luck with our own navigating. This proved easy enough once we could correlate distances on the map with distances on the water. We passed a few canoe-trippers like ourselves, usually at a distance. The only individual with whom we talked was a ranger whose fire prevention and weather station we passed. He turned out to be a student at the University of Manitoba, working on this job during his summer vacation. He paddled over one night and joined us for supper.

After two weeks our route ended back in Basswood Lake. We were met by the same ancient station wagon, and thus returned to civilization. We resolved to come back some day; and next time to rent an aluminum canoe which we had seen and which we had yearned for on some of the portages.

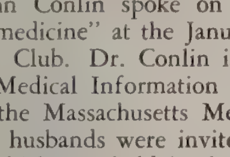
W. Sterling Edwards, M.D.,
2d Assistant Resident in Surgery

New officers for the Distaff Club were elected and took office in January. They are as follows: Eleanor DeLorme, President; Alice Rudin, Vice President; Peggy Manly, Treasurer; Ann Ragland, File Secretary; Emilye Brendler, Corresponding Secretary.

Dr. John Conlin spoke on "Current events in medicine" at the January meeting of the Club. Dr. Conlin is the Director of Medical Information and Education of the Massachusetts Medical Society. The husbands were invited to this meeting, which was held in the Nursing Supervisors' dining room at M.G.H.

The Distaff Club, a group comprised of the wives of the House Staff at M.G.H., holds regular meetings once a month at the hospital or in private homes. An invitation is extended to the wives of all new House Staff members to join our Club.

The group is an informal one, whose primary purpose is to offer the opportunity to the wives of the MGH House Staff to become acquainted with one another. Also, we offer assistance in finding apartments for those new to Boston. If you are interested in coming to our meetings, please telephone Emilye Brendler at Kenmore 6-3742.



In an earlier issue we began the account of Dr. Norton Folsom's administration. He was our eighth Director—or Resident Physician, as he was then called.

Dr. Folsom was a House Pupil at M.G.H. in 1863 and received his M.D. from Harvard in 1864. He had asked for permission to receive his medical degree in March instead of at the end of the college year so that he might apply for a position in a "colored regiment" in the War Between the States. After the war ended he served for three years as Assistant Physician at the Taunton Lunatic Asylum, followed by a similar service at the Bloomingdale Asylum for the Insane in New York City.

When he applied for the position of Resident Physician at Massachusetts General Hospital, the Superintendents of both of the above institutions recommended him very highly. Their letters are in our file, together with one from W. Arthur Conover, Brevet Colonel and late Medical Director, 25th Army Corps, Army of the James, and Medical Director of the Department of Virginia. Colonel Conover's letter is worth quoting. It reads:

> Having learned that Doctor Norton Folsom is an applicant for the position of Resident Physician of the Massachusetts General Hospital, it gives me great pleasure to recommend him to the Board of Trustees as a gentleman and physician, eminently qualified for the position, and one who would give you the greatest satisfaction in the discharge of his duties.
>
> Doctor Folsom served in the late war as Surgeon in Charge of Regiment, Surgeon in Charge of Hospital, Medical Inspector of 25th Army Corps, and Medical Director of the same, in all of which positions I was the Doctor's immediate Superior Officer, and I selected him to fill the responsible positions above mentioned simply on account of his ability to fill the same, and I can justly say no one could have discharged his duties more satisfactorily than he did.
>
> If you should choose the Doctor to fill the position he desires, I am confident you will never regret the act, but on the contrary, consider it most fortunate to have secured the services of so accomplished a gentleman, and one whose experience, ability, and energy cannot fail to accomplish all you desire in the perfecting and building up of your Hospital.
>
> My recommendation is written in strong terms, and I write in this language because I know from my own experience, no young man can bring more experience and knowledge of *Hospital Duties* than the Doctor, and I should like to see him fill so important a position, where in the discharge of his duties he would be a most useful member of society.

Dr. Folsom's letter accepting the position of Resident Physician is dated May 6, 1872. His administration, although brief, was a period of rapid expansion at Massachusetts General. Wards A and B—called the Jackson and the Warren in memory of the late Drs. James Jackson and J. Mason Warren—were begun in the summer of 1872. Probably due to Dr. Folsom's army experience, these buildings were patterned somewhat after army field hospitals. They were of iron and wood, and were connected with the main buildings by covered corridors. Particular attention was paid to ventilation, as that was considered essential for surgical cases. The next year, Ward C—called the Bigelow—was built; and 1875 saw the construction of the Townsend Ward D and the Allen Street House. Wards C and D were of brick and of a more permanent type than A and B.

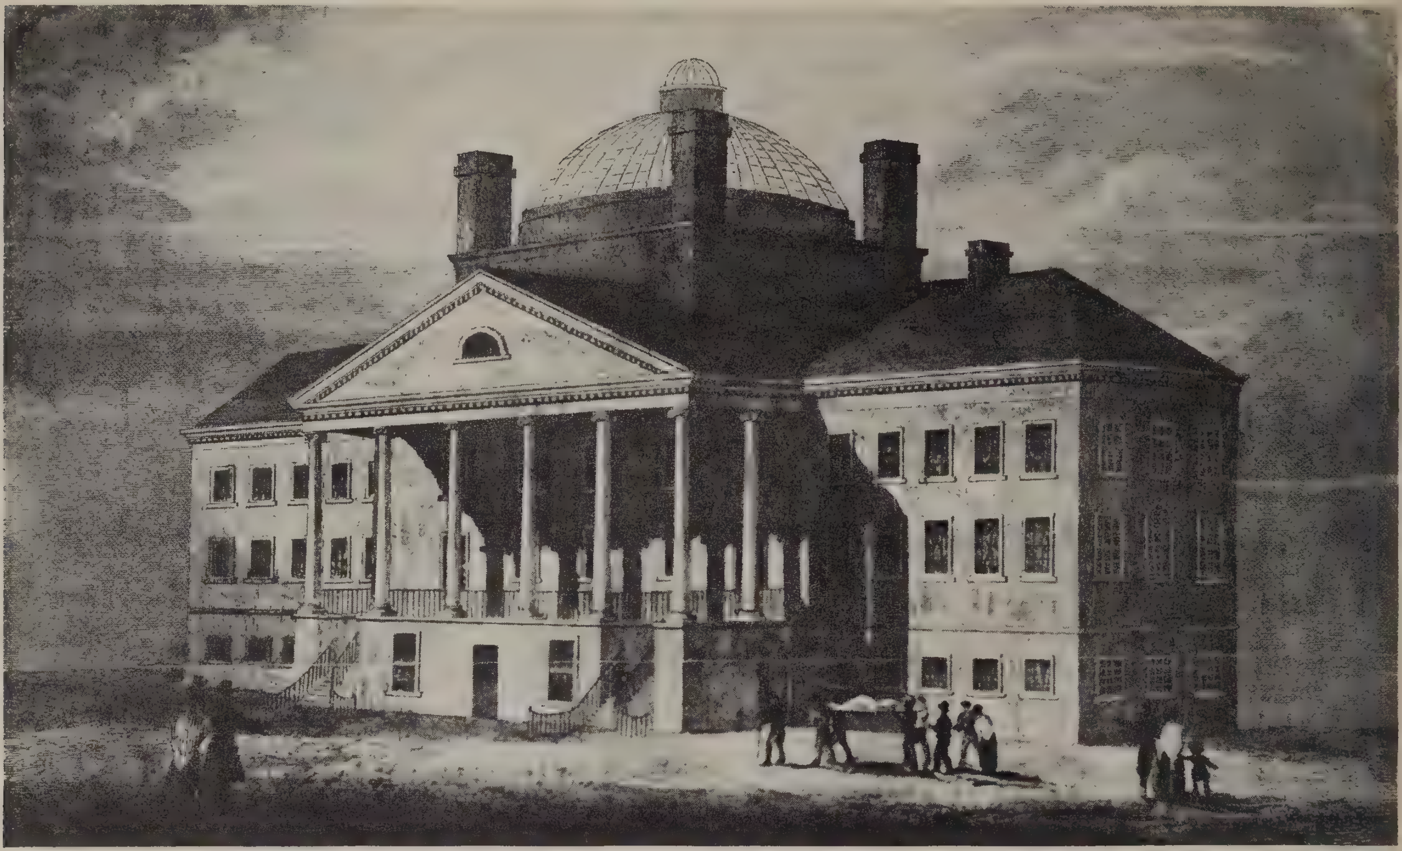
This interesting letter from Dr. Folsom to the Board of Trustees is dated March 19, 1875.

> I have just received a long letter from the President of the Johns Hopkins Hospital of Baltimore, which, after reciting the instructions of the founder to the Trustees—to whom he left about three millions of dollars for the Hospital, and whom he enjoined "to obtain the advice and assistance of those at home and abroad who have achieved the greatest success in the construction and management of Hospitals"— states that the building committee have been authorized "to confer with five distinguished physicians chosen from different parts of the country, who have made Hospitals their special study, and to obtain from them such advice as they may need, and to compensate them for it."
>
> They do me the honor to ask me to be one of these gentlemen, and ask me to embody in writing and send to them by the 1st of May next, such suggestions for their guidance in the construction and management of their Hospital, as my experience will enable me to make, and enumerate a number of points which they desire to be touched upon—and for this they offer a liberal recompense.
>
> This request, coming from a body of gentlemen of the high standing of these Trustees, is an exceedingly flattering one; and I recognize that the high reputation always maintained by our own Institution is the justification of their choice; as well as the interest in their undertaking which I was able to feel and show, at the time of two visits which they made here last year.
>
> Believing that I can comply with their request without neglecting my duties here, and without detriment in any way to this Hospital, I would respectfully ask permission of the Board to accept the remuneration offered.

Dr. Folsom and the four others chosen submitted separate plans for the organization of Johns Hopkins Hospital. These reports were published in 1875. As Dr. Washburn says, in his history of M.G.H., "A quotation from Dr. Folsom's report gives his idea of the duties of the Resident Physician (Director), and is probably a résumé of those duties at the Massachusetts General Hospital of this period." Here is the quotation:

> A Resident Physician—the executive officer; in constant and confidential communication with the Trustees, and in professional sympathy with the medical and surgical staff, he is better able to regulate action, and harmonize various interests, and to control subordinates of varied position and character, than a non-medical superintendent. His duties include those of a steward, and admitting physician; but he should have an assistant, and one or other should be always at the Hospital. Under the direction of the Trustees, he has control of the Hospital in all respects, except the treatment of patients. He makes all purchases for the regular needs of the Hospital, and receives all moneys paid for board or otherwise, and his accounts are settled monthly with the Treasurer. His decisions as to the admission of patients, their rate of board, shape the whole character of the charity. He appoints and discharges all employees not elected by the Trustees. He is responsible for the proper warming, ventilation, cleaning, and repair of the Hospital, and for the discipline of house officers, employees, patients, and visitors. He provides the diet and remedies ordered by the physicians and surgeons, and keeps records of applications, admissions, discharges, etc. He has custody of all property at the Hospital. In case of emergency, in the absence of the visiting physicians and surgeons, he acts for them in regard to treatment, and discharges patients if discipline requires it. He assigns patients to the proper ward and bed, and directs removal or change, when necessary. He orders all autopsies in writing, under rules made by the Trustees. He makes an annual report to the Trustees of the doings of the year, and the state of the Hospital.

Our file on Dr. Folsom reveals a misunderstanding concerning a matter of $500 drawn by Dr. Folsom for the services of a substitute during Folsom's absence on account of illness. The matter was referred to a committee on accounts who,



"How firm a foundation"

on January 14, 1876, reported that while Dr. Folsom was not authorized to draw the $500, he "did it under a misapprehension, supposing that he was entitled to fill his place at the expense of the Hospital, having previously obtained leave of absence from the chairman. Whether or not Dr. F. should return the sum so drawn, the committee beg to refer the question back to the consideration of the Board."

The next item in the file is brief and to the point. It is a four-line note from Dr. Folsom to the Board of Trustees, dated April 18, 1876, and reads:

> Gentlemen,
>
> I have the honor to present to you my resignation of the office of Resident Physician.

An examination of the minutes of the Trustees' meetings during this period fails to substantiate our supposition that Dr. Folsom's resignation may have been due to the $500 matter. The minutes contain the simple statement that his resignation had been received.

The last item in the file is a letter from Dr. Folsom written to the Medical Board on September 30, 1876. It reads:

> I thank the Medical Board most warmly for their appreciation of what I have done, and what I have tried to do, at the Hospital; and no less for the kindness and delicacy which mark the expression of it.
>
> Their letter will always be a valued memorial of their confidence and regard.
>
> I heartily return their good wishes.

New addresses:—

Dr. David W. Compton (*r.p. An.* 1946), 907 East Columbia, Seattle, Wash.
Dr. Leslie C. Dodson (*r.s.* 1932), 330½ Allen St., Owensboro, Ky.
Capt. Harold L. Emrich (*past Chief Accountant, M.G.H.*), Co. D, 307th MP Bn., Fort Sam Houston, San Antonio, Tex.
Dr. Joseph W. Gardella (*M* 1945), Mary Imogene Bassett Hospital, Cooperstown, N. Y.
Dr. G. Douglas Krumbhaar (*assoc. obst.*), 203 Commonwealth Ave., Boston, Mass.
Dr. Raymond F. Kuhlmann (*r.s. Or.* 1948), 256 Pearl St., Burlington, Vt.
Dr. Bernard Maisel (*r.p. P* 1943), 1 East 69th St., New York 21, N. Y.
Dr. Herbert C. Moffitt, Jr. (*EM* 1942), 909 Hyde St., San Francisco 9, Calif.
Dr. Charles W. Robertson (*P* 1942 & *ES* 1943), 203 Commonwealth Ave., Boston, Mass.
Dr. Robert N. Rutherford (*WS* 1938), 707 Broadway, Seattle 22, Wash.
Dr. Carl S. Sawyer (*D* 1943), 184 Waterman St., Providence, R. I.
Lt. James M. Shannon, MC, USAR (*S* 1948), 343rd General Hospital, APO 43, c/o Postmaster, San Francisco, Calif.
Dr. Sam M. Talmadge (*WS* 1938), 1010 Prince Ave., Athens, Ga.
Dr. Benjamin Tenney, Jr. (*WS* 1927), 203 Commonwealth Ave., Boston, Mass.
Dr. Blair van H. Thatcher (*ES* 1945), 18 Kraft Ave., Bronxville, N. Y.
Major John P. Wood, MC, USNR (*gr. asst.* R 1939), Tripler General Hospital, Honolulu, H. I.

* * *

Dr. Clay received the following letter from Dr. Gordon L. Block (*r.s. U* 1950). It is headed 1035 Carew Tower, Cincinnati 2, Ohio, and reads:

> I have just received my diploma from the M.G.H. It will occupy a prominent place in my office from this day hence.
>
> I have recently been appointed to the staff of the College of Medicine, University of Cincinnati, and am enjoying my first few months in practice. However, I do miss Boston and the M.G.H.

From 1 East Gilman Street, Madison 3, Wisconsin, comes this letter from Dr. John W. Littlefield (*M* 1948):

> Here is a check in order that I may receive THE NEWS for a year, with the hope that my corrected title and address will last that long. Though awaiting orders momentarily, I am to this date still a civilian and have started a fellowship in enzymology at the University of Wisconsin as of the first of February.
>
> Shortly before the New Year the chief of my service advised that I use the days before my reactivation in beachcombing around Charleston, S. C. This impressed me as unseemly for a new son-in-law, and we drove north to reach Madison a few hours after it had experienced -37° refrigeration. A cozy little spot forty miles west of here, called Lone Rock, hit -53°. The only organisms appreciating this climate seem to be the enzyme preparations.

We were very glad to receive this letter from Dr. Ellsworth H. Trowbridge, Jr. (*a.r.p.* N 1940).

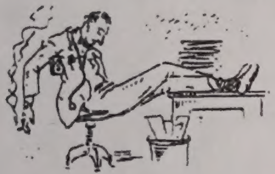
> I am now located in my new office at 1905 Bryant Building, 1102 Grand Avenue, Kansas City, Missouri. Included in the suite is a brain wave laboratory which is probably the highest electroencephalographic laboratory in the world.
>
> Besides private practice, we are in charge of the brain wave laboratory at the University of Kansas Medical School.

Letters from those who have been with us on fellowships from countries outside the United States are always particularly appreciated. This one has come from Dr. J. David Wade (*clin. & res. fel. S* 1950). His address is 20 West Camus Road, Fairmilehead, Edinburgh, Scotland, and reads:

> I am anxious to continue my subscription to THE NEWS, but find it is a very slow business obtaining permission to send you $2. The matter has to go to the Treasury, and you can imagine what that means!
>
> I have just had the pleasure of meeting Ben Rowe who was a surgical resident at M.G.H. last year. I shall further our acquaintance during the next month, when he will be at the Thoracic Unit in Edinburgh. He has just recovered from an unpleasant brand of the local flu and now considers he is fully acclimated to our weather and conditions.

THE NEWS

No. 80 Boston, Mass. June 1949



You probably looked for, and were disappointed that you did not find, a second contribution to the newly-launched House Staff column in your last copy of THE NEWS. Explanation: there was too little time between the announcement of the new section in the April issue and the deadline date for the May number—too little time for the preparation of an article by any one of our busy House Staff. We trust there will be no further interruptions in the schedule, for, as you read the following article and remember Dr. Rodkey's write-up on China, you will see that we were correct in our presumption that our House Staff has something of significance to say.

To the Editor:

The sketch by Dr. Grillo that heads your new department in THE NEWS deserves close examination. There are small details of it not to be passed over unappreciatively. I wonder why Dr. Grillo has his fellow wear a bow tie. The tie-wearing and the non-tie-wearing divisions of the House Staff are notably distinct, if not clearly understood by all observers. This is illustrated by an incident that occurred not long ago in our Emergency Ward. A young lady technician in one of the hospital laboratories cut her finger on a piece of broken glassware. When she presented herself at the E.W. desk she said she had been directed by her superior to request that the injury be treated by "one of the boys without a tie".

Let us back to the picture. A critical evaluation of the pose has been made by some of the staff. One of the critics believes the fellow does not doze, but patiently awaits X-ray reports to be processed.

On the other hand, it seems to me that the young doctor in the drawing does not sleep, but he does dream, half awake. There is a great difference between dreaming asleep and dreaming awake. The former is not reproachable, whereas the latter —which requires more delicate circumstances—has been scoffed at, and its devotees teased by the Philistines. Even Aldous Huxley, who once knew better, classes it poorly: "gossip, daydreaming, and mere self-expression, intrinsically unedifying." It is put in its better light in the closing chapter of *Walden*. "If you have built castles in the air your work need not be lost; that is where they should be. Now put the foundations under them. . . ."

Of course, daydreaming must have its proper time. I think there is only one time for really good daydreaming—during those long minutes that follow the lying down in bed and precede the coming of sleep. A minute is an hour of ideas. Sometimes sleep will overtake one amid those ideas, and sleeping dreams will grow from those of the half-awake. But that is less pleasant than suddenly to be alert, to stop short the free-winging thought, to be swiftly conscious, but for a brief second, that one's mind has been awake while one's body has slept; and then to plunge quickly into dreamless slumber.

Those thoughts-before-sleep are the forms and the perfections, the Entelechy, the may be; for when sleep climbs from the limbs to the brain, we become liberal arbiters.

The morning is clean; the body is rested; and the mind is emptied of the conqueror's schemes, the artist's triumphs, the engineer's plans. The maidens are not so fair in their mirrors as they were in their mind's half-asleep eyes. Sometimes one's head aches.

Elia wrote, understandingly: "Let the most romantic of us, that has been entertained all night with spectacle of some wild and magnificent vision, recombine it in the morning, and try it by his waking judgment. That which appeared so shifting and yet so coherent, while the faculty was passive, when it comes under cool examination shall appear so reasonless and so unlinked, that we are ashamed to have been so deluded; and to have taken though but in sleep, a monster for a god."

There it is—in Dr. Grillo's daydreaming House Officer with the bow tie. The temptation to daydream has won him.

Leonard D. Rosenman, M.D.,
(*ES* 1943 & *1st asst. r. in S*)

P.S. Your invitation to the House Staff to use these pages has been accepted. Do you agree with Cervantes? "For I am not ignorant of the Temptations of Satan; and of all his Imps, the Scribbling Devil is the most Irresistible."

L. D. R.
